SECTION 1 ELECTROMAGNETIC INTERFERENCE (EMI)

WARNING

This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

SECTION 2 INCIDENCE OF HARM

If the System is malfunctioning, it may also be causing harm to the telephone network. The Telephone system should be disconnected until the source of the problem can be determined and until repair has been made. If this is not done, the Network Provider may temporarily disconnect the service.

SECTION 3 HEARING AID COMPATIBILITY

The NEC Multiline Terminals that are provided for this system are hearing aid compatible. The manufacturer of Single Line Telephones for use with the system must provide notice of hearing aid compatibility to comply with ACA Technical Standards.

SECTION 4 SERVICE REQUIREMENTS

WARNING

This equipment must only be installed and maintained by service personnel.

In the event of equipment malfunction, all repairs must be performed by an authorised dealer of NEC Business Solutions Ltd or by NEC Business Solutions Ltd. It is the responsibility of users requiring service to report the need for service to one of NEC Business Solutions Ltd authorised agents or to NEC Business Solutions Ltd.

SECTION 5 COMPLIANCE INFORMATION

This equipment has been tested to comply with all relevant ACA Technical Standards.

The Xen Topaz KSU must be permanently connected to protective earth, via the earth terminal inside the KSU.
SECTION 6 CONNECTION REQUIREMENTS FOR EARTHING THE TOPAZ KSU

Because this Topaz KSU has been ACA approved as an Earthed-SELV Customer Switching System for connection to a telecommunications network, the KSU Earth terminal $E$ (on the 308M System Mainboard) **MUST** be permanently connected to Earth by connecting a minimum of 2.5mm² green/yellow conductor cable.

This cable **MUST** be connected between a Multiple Earth Neutral (MEN) Bonding Bar at the nearest convenient mains Switch Board to the KSU. This cable must serve no other purpose than installing the KSU.

**CAUTION:** If this cable is not installed or requires disconnection, then the telecommunication network connection(s), namely CO and/or ISDN, must be disconnected first from the KSU.

Liability for this installation rests solely with the licensed installer/dealer. It is recommended that the installer provide their label and it is to be placed in the Main Switch Board, certifying that the installation complies with the safety earthing installation manual instructions for the Topaz KSU Section 3.1.

SECTION 7 VOICE Announcement/Monitoring

**CAUTION**

The use of monitoring, recording or listening devices to eavesdrop, monitor, retrieve or record telephone conversations or other sound activities, whether or not contemporaneous with its transmission may be illegal in certain circumstances under federal or state laws. Legal advise should be sought prior to implementing any practice that monitors or records any telephone conversation. *The telecommunications (Interception) Act* 1979 (Cth), *The telecommunications Act* 1997, *The Privacy Act* 1988 and State and Territory Listening Devices Legislation are all relevant. Some federal and state laws require some form of notification to all parties to the telephone conversation, such as using a beep tone or other notification methods, or require the consent of all parties to the telephone conversation, prior to monitoring or recording a telephone conversation. Some of these laws incorporate strict penalties. Section 6 of the Industry Guidelines recommend pre-recorded messages or verbal notification to alert callers that the calls may be monitored:

For example: “Your call may be listened to and recorded for quality and coaching purposes. Please tell the consultant if you don’t want this to happen.”

Section 6 of the Industry Guidelines also make recommendations in relation to notifications in writing.
SECTION 8  MUSIC ON HOLD

IMPORTANT NOTE

In accordance with Australian Copyright Law, a license may be required from The Australian Performing Right Association Limited (APRA), or other similar organisation, when radio or TV broadcasts are transmitted through the Music On Hold feature of this telecommunication system. NEC Business Solutions Ltd hereby disclaims any liability arising out of the failure to obtain such a license.

SECTION 9  BATTERY DISPOSAL AND SAFETY

This system includes the batteries listed below. When disposing of these batteries, KSUs and/or cards, you must comply with applicable Federal and State regulations regarding proper disposal procedures.

IMPORTANT SAFEGUARDS FOR BATTERY DISPOSAL

The incineration, landfilling or mixing of nickel-cadmium or sealed lead batteries with the municipal solid waste stream is PROHIBITED BY LAW in most areas. Contact your local solid waste management officials for other information regarding the environmentally sound collection, recycling and disposal of the battery.

Nickel-Cadmium or sealed lead batteries must be returned to a Federal or State approved nickel-cadmium or sealed lead battery recycler. This may be where the batteries were originally sold or a local seller of automotive batteries. Contact your local waste management officials for other information regarding the environmentally sound collection, recycling and disposal of the battery contained in this product.

SECTION 1 FEATURES

Before Reading This Section

This section provides detailed information on the system's features. If you don't know what the various features are, review the Table of Contents for this section and the manual's Index. After reviewing, turn back to this section for the specifics.

Using This Section

The features in this section are in alphabetical order, like a dictionary. This section subdivides each feature definition into headings as follows:

The Compatibility Chart at the top of each feature shows you if the feature is available for each system and what system software is required.

Description tells what the feature is and describes its benefits. Along with the Description are the Conditions and Default Setting. Conditions provides the feature's operational limits (if any). Default Setting outlines how the feature works with the default programming. When initially installed, the system uses the default setting. For specific default settings on each program, refer to the chart at the end of this book.

Programming explains the system programming that lets you customize the feature. Some features require programming; other's don't. If you decide to customize a feature, use Section 2 to enter the change into the system.

Related Features presents the feature interaction.

Operation consists of instructions on how to use each feature.

Read These Notes

Simplifying System Phone Operation with One-Touch Keys

A system phone user can access many features through Service Codes (e.g., Service Code 841 answers a Message Waiting indication from a co-worker). To streamline the operation of their phone, a system phone user can store these codes under One-Touch Keys. This provides one-button operation for almost any feature. To find out more, turn to the One-Touch Calling and One-Touch Serial Operation features.

Programmable Keys

When reading an instruction using programmable keys, you will see a notation similar to (PGM 15-07 or SC nnn). This means that the key requires function code nnn, and you can program this code through Program 15-07 or by dialling Service Code 851 or 852. Refer to the Programmable Function Keys feature for more information.
Using Handsfree

The manual assumes each extension has Automatic Handsfree. This lets a user just press a line key or CALL key to answer or place a call. For extensions without Automatic Handsfree, the user must:

- Lift the handset or press SPK for Intercom dial tone
- Lift the handset or press SPK, then press a line key for trunk dial tone

### Table 3-2: Function Key Codes by Number

To program a key, press CALL, dial 851 (for 2-digit codes) or 852 (for 3-digit codes), press the key and enter the code.

<table>
<thead>
<tr>
<th>Use this key...</th>
<th>For this feature...</th>
<th>When you are...</th>
<th>Key Lamp Status</th>
</tr>
</thead>
</table>
| **Code**: 01 + any digits + HOLD  
**Operation**: Press key | Direct Station Selection, Hotline, Outside calls, Service Codes | Calling an extension using a DSS key | DSS only  
Off = extension idle  
On = extension busy  
Flashing = DND |
| Code: 02 | Not available | Not available | Not available |
| Code: 03 | Do Not Disturb | Activating DND | On red when activated |
| Code: 04 | Background Music | Turning BGM on or off | On red when activated |
| Code: 05 | Headset Operation | Enabling or disabling Headset Operation | On red when activated |
| Code: 06 | Establish call + Hold + Ext. + Press key | Transfer | Transferring a call | None |
| Code: 07 | Conference | Setting up a conference or a Meet Me Conference | On red during setup |
| Code: 08 | Press key | Missed Calls | Viewing answered/missed trunk calls |
| **Code**: 09 + mode (1-8)  
**Operation**: Press key | Night Service | Activating the Day/Night Mode | On red when activated |
| Code: 10 | Call Forwarding, Immediate | Call Forwarding to extension or Voice Mail | Slowly flashes red |
| Code: 11 | Call Forwarding, Busy | Call Forwarding to extension or Voice Mail | Slowly flashes red |

The DSS Function key will allow the entry of up to 24 digits, these can be any digits e.g. extension numbers, Service Codes or outside numbers. If the digits entered match an extension number then the function key will be a DSS key for the extension and show busy lamp information. If the digits entered match a Service Code the function key will access the feature. If the digits entered begin with a trunk access code the Topaz will seize a trunk and dial the remaining digits to line. For trunk calls the digits can contain the special functions: Flash, Pause and Wait for Answer.

Abbreviated Dialling

• Description

Abbreviated Dialling gives an extension user quick access to frequently called numbers. This saves time, for example, when calling a client with whom they deal often. Instead of dialling a long telephone number, the extension user just dials the Abbreviated Dialling code.

There are three types of Abbreviated Dialling: Common, Group and Personal. All co-workers can share the Common Abbreviated Dialling numbers. All co-worker's in the same Abbreviated Dialling Group can share the Group Abbreviated Dialling numbers. Personal Abbreviated Dialling numbers are available only at a user's own extension. The system has 2000 Abbreviated Dialling bins that you can allocate between Common and Group Abbreviated Dialling. In addition, each user has 20 personal Abbreviated Dialling bins.

Each Abbreviated Dialling bin can store a number up to 36 digits long.

When placing an Abbreviated Dialling call, the system normally routes the call through Trunk Group Routing or ARS (whichever is enabled). Or, the user can pre-select a specific trunk for the call. In addition, the system can optionally force Common Abbreviated Dialling numbers to route over a specific Trunk Group. User pre-selection always overrides the system routing.

Common Abbreviated Dialling

At default the system has 900 Common Abbreviated Dials set by Program 13-01-03. Although there are 2000 abbreviated dialling bins available we do not recommend that you increase the quantity of Common Abbreviated Dial bins (since the Personal Abbreviated bins are also accessed with bin numbers 900-919 by the user).

The entries of the Common Abbreviated bins can be set either with Program 13-04-01 or with Service Code 853. They can be dialled by pressing the DC key or Service Code * followed by the bin number.

Group Abbreviated Dialling

At default there are no groups assigned in Program 13-02-01. There are up to 32 groups available. You can set the quantity of bins available for each group; the quantity must be in multiples of 10. The bins used for each group cannot overlap any other group or the Common Abbreviated bins.

The entries of the Group Abbreviated bins can be set either with Program 13-04-01 or with Service Code 854. They can be dialled by Service Code 814 followed by the bin number.

When using Service Codes 854 and 814 the bin number starts at 000 for each group regardless of the actual start bin number defined in Program 13-02-01.
Personal Abbreviated Dialling
There are 20 Personal bins available for each extension.

The entries of the Personal Abbreviated bins can be set with Service Code 853 at each telephone. They can be dialled by Service Code * followed by the bin number 900-919.

DSS Console Chaining
DSS Console chaining allows an extension user with a DSS Console to chain to an Abbreviated Dialling number stored under a DSS Console key. The stored number dials out (chains) to the initial call. This can, for example, simplify Dialling when calling a company with an Automated Attendant. You can program the bin for the company number under one DSS Console key and the client’s extension number under the other DSS Console key. The DSS Console user presses the first key to call the company, waits for the Automated Attendant to answer, then presses the second key to call the client extension. See Programming below for additional details.

The DSS Console user can also chain to an Abbreviated Dialling number Dialled manually, from a Programmable Function Key or a One-Touch Key.

Storing a Flash
To enhance compatibility with connected PBX lines, an Abbreviated Dialling bin can have a stored Flash command. For example, storing 0 Flash 926 5400 will cause the system to dial 0, flash the line and then dial 926 5400. The Flash can be stored by the user from their telephone or by the system administrator during system programming.

Using a Programmable Function Key
To streamline frequently-called numbers, an Abbreviated Dialling Programmable Function Key can also store an Abbreviated Dialling bin number. When the extension user presses the key, the phone automatically dials out the stored number. This provides true one-touch calling via a phone’s function keys.

Conditions
None

Default Setting
900 Common Abbreviated Dialling Bins (000~899)

20 Personal Abbreviated Dialling Bins (900~919)

There are no Group Abbreviated Dialling bins assigned.

• Programming

13-01-01 : Abbreviated Dialling Function Setup - Abbreviated Dialling Auto Outgoing Call mode
Assign as Trunk Outgoing Mode when all Abbreviated Dialling bins contain external numbers only. The trunk access code (default=0) is automatically prefixed to each number when dialled. Assign as Extension Outgoing Mode to allow Abbreviated Dialling bins to contain both external and internal numbers. In this case, external numbers must include the trunk access code (default=0) when the number is stored.

13-01-02 : Abbreviated Dialling Function Setup - Personal Abbreviated Dial
Enable to allow access to Personal Abbreviated Dialling bins or disable to provide Common Abbreviated Dialling bins only. When Personal Abbreviated Dialling is enabled, these 20 bin numbers cannot be used for Common Abbreviated Dialling, even though the numbering ranges may overlap.

13-01-03: Abbreviated Dialling Function Setup - Common Abbreviated Dialling Bins
Designate the bins the system will use for Common Abbreviated Dialling.

Depending on the number of bins assigned in Program 13-01-03, the number of digits used for Abbreviated Dialling will be different:
- 13-01-03 = 0-100, Abbreviated Dialling is 2 digit.
- 13-01-03 = 200-1000, Abbreviated Dialling is 3 digit.
- 13-01-03 = 1100-2000, Abbreviated Dialling is 4 digit.

13-02-01: Group Abbreviated Dialling Bins
Designate the bins the system will use for Group Abbreviated Dialling.

13-03-01: Abbreviated Dialling Groups Assignment for Extensions
For Group Abbreviated Dialling, assign extensions to Abbreviated Dialling groups (1-32).

13-04-01: Abbreviated Dialling Number and Name
Enter the Common and Group Abbreviated Dialling numbers and names.

13-05-01: Abbreviated Dialling Trunk Group
For each Common Abbreviated Dialling number, enter the routing option. To use ARS or Trunk Group Routing, enter 0. To use a specific Trunk Group, enter the group number (1-25).

14-02-06: Analogue Trunk Data Setup - Pause Time
Enable/disable the systems ability to pause after dialling the first digit.

15-07-01: Programming Function Keys
Assign a function key for Common/Personal Abbreviated Dialling (code 27) or Group Abbreviated Dialling (code 28). You can program the key as either a general Abbreviated Dialling key or you can choose to store a bin number with the function key. This key would then always dial the
associated bin number. If storing a bin number along with the code, do not store 0, 00 or 000. To bypass entering a bin number, press HOLD (HOLD is also required if programming the function key using the service code 851).

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to an extension.

20-07-04: COS Options - Storing Abbreviated Dialling Entries
In an extension's COS, allow (1) or prevent (0) the storing of Abbreviated Dialling entries (codes 853 and 854). Preventing this option will also prevent the user's display from showing the telephone number. This can be used when you want to prevent account codes from being displayed.

20-08-03: COS Options (Outgoing Call Service) - Common Abbreviated Dialling
In an extension's COS, enable (1) or disable (0) Common Abbreviated Dialling.

20-08-04: COS Options (Outgoing Call Service) - Group Abbreviated Dialling
In an extension's Class of Service, enable (1) or disable (0) Group Abbreviated Dialling.

30-03-01: DSS Console Key Assignment
For DSS Console Chaining, assign an Abbreviated Dialling Service Code (813 or 814) plus a two-digit bin number to a DSS Console key.

• Related Features
  • Account Codes
    Abbreviated Dialling bins can contain stored Account Codes. Prevent them from being displayed using 20-07-04.
  • Automatic Route Selection
    For systems with Automatic Route Selection, ARS selects the trunk for the call unless the user preselects.
  • Central Office Calls, Placing
    A user can implement Abbreviated Dialling only if their extension has outgoing access to trunks.
  • PBX Compatibility
    If you enter a PBX trunk access code in an Abbreviated Dialling bin, the system automatically inserts a pause after the bin.
  • Programmable Function Keys
    Function keys simplify Abbreviated dialling operation.
  • Single Line Telephones
    Single line telephones can only dial Common, Personal and Group Abbreviated dialling numbers.
  • Toll Restriction
    Toll Restriction may prevent a user from using a stored Abbreviated dialling number.
  • Trunk Group Routing
    Unless a user preselects a trunk, Trunk Group Routing selects the trunk Abbreviated dialling uses for trunk calls.
• Operation

Store Abbreviated Dialling number (display system phones only):

1. Press **SPK** key.
2. Dial **853** (for common/personal) or **854** (for group).
3. Dial the Abbreviated Dialling bin number,
   - **Common** = **000-899**,
   - **Personal** = **900-919**,
   - **Group** = **000-1999** (not set in default).
4. Dial telephone number you want to store (up to 36 digits).
   - *Valid entries are 0-9, # and *. To enter a pause, press **MIC**. To store a Flash, press **FLASH**.*
5. Press **HOLD**.
6. Enter the associated name (up to 12 digits).
   - *Use the keypad digits as shown in the character table below.*
7. Press **HOLD**.
8. Press **SPK** to hang up.

<table>

</tbody>
</table>
To dial a Common/Personal Abbreviated Dialling number:

1. Press SPK key (or lift handset).
2. Dial *.
   -OR-  
   Press DC key.
   -OR-  
   Press Common/Personal Abbreviated Dialling key (PGM 15-07 or SC 851: 27).  
   *To preselect, press a line key in step 1 (instead of CALL) before pressing the DC or Abbreviated Dialling key.*
3. Dial Abbreviated Dialling bin number.  
   **Common**=000-899,  
   **Personal**=900-919.  

   The stored number dials out. Unless you preselect, Trunk Group Routing selects the trunk for the call. The system may optionally select a specific Trunk Group for the call. If you have a DSS Console, you may be able to press a DSS Console key to chain to a stored number.

To dial a Group Abbreviated Dialling Number:

1. Press SPK key (or lift handset).
2. Dial 814.  
   -OR-  
   Press DC key.
   -OR-  
   Press Group Abbreviated Dialling key (PGM 15-07 or SC 851: 28).  
   *To preselect, press a line key in step 1 (instead of CALL) before pressing the DC or Abbreviated Dialling key.*
3. Dial Abbreviated Dialling bin number.  
   **Group**=000-1999 (not set in default).

   The stored number dials out. Unless you preselect, Trunk Group Routing selects the trunk for the call. The system may optionally select a specific Trunk Group for the call. If you have a DSS Console, you may be able to press a DSS Console key to chain to a stored number.

To Check an Abbreviated Dialling number (display system phone only):

1. Press CHECK.
2. Press DC.
3. Dial the Abbreviated Dialling bin number.  
   *If the entire stored number is too long for your phone’s display, press * to see the rest of it.
4. Press CLEAR.
   -OR-  
   1. Press CHECK.
2. Press the Common/Personal/Group Abbreviated Dialling key.  
   *If the entire stored number is too long for your phone’s display, press * to see the rest of it
3. Press CLEAR.
Account Codes

• Description

Account Codes are user-Dialed codes that help the system administrator categorize and/or restrict trunk calls. The system has three types of Account Codes:

Optional Account Codes
Optional Account Codes allow a user to enter an Account Code while placing a trunk call or anytime while on a call. This type of Account Code is optional; the system does not require the user to enter it.

Forced Account Codes
Forced Account Codes require an extension user to enter an Account Code every time they place a trunk call. If the user doesn’t enter the code, the system prevents the call. As with Optional Account Codes, the extension user can elect to enter an Account Code for an incoming call. However, the system does not require it.

Once set up in system programming, you can enable Forced Account Codes on a trunk-by-trunk basis. In addition, Forced Account Codes can apply to all outside calls or just long distance calls.

Verified Account Codes
With Verified Account Codes, the system compares the Account Code the user dials to a list of up to 1000 pre-programmed codes. If the Account Code is in the list, the call goes through. If the code Dialed is not in the list, the system prevents the call. Verified Account Codes can be from 3-16 digits long using the characters 0-9 and #. During programming, you can use “wild cards” to streamline entering codes into system memory. For example, the entry 123W lets users dial Verified Account Codes from 1230 through 1239.

Operator Notification
To prevent Account Code abuse, the system can notify the operator each time an Account Code violation occurs. This can happen if the user fails to enter an Account Code (if Forced) or enters a Verified Account Code that is not in the list. The notification is an automatic Intercom call to the attendant and a “RESTRICT” message in the operator’s display. (If the attendant fails to enter a valid Account Code, the system drops the call.)

Account Codes for Incoming Calls
The system can control the ability of extension users to enter Account Codes for incoming calls. When this option is enabled, a user can dial * while on an incoming call, enter an Account Code, and then dial * to return to their caller. If the option is disabled, any digits the user dials after answering an incoming call outdial on the connected trunk.

Hiding Account Codes
Account Codes can be optionally hidden from a telephone’s display. This would prevent, for example, an unauthorized co-worker from obtaining a Verified Account Code by watching the display and making note of the digits that dial out. When hidden, the Account Code digits show as the character “* *” on the telephone’s display.
Account Code Capacity
Account Codes print along with the other call data on the SMDR record after the call completes. Account Codes can be 1-16 digits in length using 0-9 and #. Verified Account Codes can be from 3-16 digits long.

Redialled Numbers Do Not Contain Account Codes
When using the Last Number Redial, Save or Repeat Dial features, the system will not retain Account Code information. Any number redialed with these features, the user will need to re-enter an Account Code.

Note: If a user enters *12345*203 926 5400*67890*, if the Last Number Redial feature is used, the system dials the number as 203 926 5400*67890*. The *67890* is not treated as an Account Code.

Access to Emergency Numbers
When Forced or Verified Account Codes are enabled, the emergency number 000 may be blocked. To allow access to the emergency number, as required by law, assign 000 to an Abbreviated Dialling bin (e.g. 000=*1*000) and then program this to a Programmable Feature key (e.g. SC851 : 01:*000). This key must be labelled as Emergency.

Conditions
A. Account Codes are user-Dialled codes that help the system administrator categorize and/or restrict trunk calls. The system has three types of Account Codes, optional, forced and verified.
B. If a user enters a code that exceeds the 16 digit limit, the system ignores the Account Code entry.
   If the system has Account Codes disabled, the digits Dialed (e.g., *1234*) appear on the SMDR report as part of the number Dialed.
C. Do not use an asterisk within a PBX access code when using Account Codes. Otherwise, after the *, the trunk will stop sending digits to the central office.

Default Setting
Account Codes are disabled.

• Programming

14-01-11: Basic Trunk Data Setup - Account Code
Enable (1) or disable (0) Forced Account Codes for each trunk.

15-07-01: Programming Function Keys
Assign a function key as an Account Code key (code 50). Use this key instead of the dial pad to enter the * before and after the Account Code.

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to an extension.

20-13-20: Class of Service Options (Supplementary Service) - Account Code/ Toll Restriction Operator Alert
When enabled, the operator is alerted when an extension improperly enters an Account Code or violates Toll Restriction.

21-01-14: Forced Account Code Inter-digit Timer
The system waits this amount of time for a user to dial Forced Account Code digits (0-64800 sec.).

21-04-01: Toll Restriction Class for Extensions
Use this option to assign a Toll Restriction Class (1-15) to an extension.

For each Class of Service (1-15) use this option to select the Account Code Mode. The options are:
0 Account Codes disabled. (Any codes you enter dial out as part of your initial call.)
1 Account Codes optional (not required).
2 Account Codes required (forced) but not verifiable.
3 Account Codes required (forced) and verifiable.

35-05-03: Account Code Setup - Account Codes for Incoming Calls
For each Class of Service (1-15), enter 1 in this option to enable Account Codes for incoming calls. Enter 0 to disable Account Codes for incoming calls. If disabled, any codes you enter dial out on the connected trunk.

35-05-04: Account Code Setup - Hiding Account Codes
For each Class of Service (1-15), enter 1 to have the system hide Account Codes on an extension’s display as they are entered. Enter 0 to have the Account Codes displayed.

35-06-01: Verified Account Code Table
Use this option to enter data into the Verified Account Code Table. You can enter up to 2000 codes from 3-16 digits in length. For a wild card, press the FLASH key.

• Related Features
  • Abbreviated Dialling
    Abbreviated dialling bins can contain stored Account Codes. Prevent them from being displayed using 20-07-04.
  • Automatic Route Selection
    ARS can force a user to enter an Authorization Code prior to using a certain route. The system verifies the ARS Authorization Code dialled against the ARS Authorization Code list (Program 44-03).
  • Programmable Function Keys
    To simplify Account Code entry, store the Account Code (e.g., *1234*) in a One-Touch Key. Just press the key instead of dialling the codes.
  • PBX Compatibility
    When using Account Codes, do not use an asterisk within a PBX access code. Otherwise, after the *, the trunk would stop sending digits to the central office.
  • Station Message Detail Recording
    Account Codes appear on the SMDR report (even if they are hidden on the phone’s display).

• Operation
To enter an Account Code any time while on a trunk call:

The outside caller cannot hear the Account Code digits you enter. You can use this procedure if your system has Optional Account Codes enabled. You may also be able to use this procedure for incoming calls. This procedure is not available at SLTs.
1. Dial *.
   OR
   Press your Account Code key (PGM 15-07 or SC 851: code 50).

2. Dial your Account Code (1-16 digits, using 0-9 and #).
   If Account Codes are hidden, each digit you dial will show an "*" character on the telephone's display.

3. Dial *.
   OR
   Press your Account Code key (PGM 15-07 or SC 851: code 50).

**To enter an Account Code before dialling the outside number:**

If your system has Forced Account Codes, you must use this procedure. If it has Verified Account Codes, you can use this procedure instead of letting the system prompt you for your Account Code. You may also use this procedure if your system has Optional Account Codes. If your system has Verified Account Codes enabled, be sure to choose a code programmed into your Verified Account Code list.

1. Access trunk for outside call.
   You can access a trunk by pressing a line key or dialling a code (except 0). Refer to Central Office Calls, Placing for more information.

2. Dial *.
   OR
   Press your Account Code key (PGM 15-07 or SC 851: code 50)

3. Dial your Account Code (1-16 digits, using 0-9 and #).
   If you make an incorrect entry, your system may automatically alert the operator. If Account Codes are hidden, each digit you dial will show an "*" character on the telephone's display.

4. Dial *.
   OR
   Press your Account Code key (PGM 15-07 or SC 851: code 50)

5. Dial the number you want to call.
   If you hear "stutter dial tone after dialling the number, ARS is requesting that you enter an ARS Authorization Code. Refer to Automatic Route Selection for more information.

**To dial an outside number and let your system tell you when an Account Code is required:**

1. Access a trunk and dial the number you want to call.
   If you hear "stutter dial tone after dialling the number, ARS is requesting that you enter an ARS Authorization Code. Refer to Automatic Route Selection for more information.

2. Wait for your call to go through.
   OR
   If you hear "Please enter an Account Code," and your display shows ENTER ACCOUNT:
   Dial *.
   OR
   Press your Account Code key (PGM 15-07 or SC 851: code 50)
   Dial your Account Code (1-16 digits, using 0-9 and #).
   If Account Codes are hidden, each digit you dial will show an "*" character on the telephone's display.
   Dial *.
   OR
   Press your Account Code key (PGM 15-07 or SC 851: code 50)

**To enter an Account Code for an incoming call:**

This procedure is not available at SLTs.

1. Answer incoming call.
   If Account Codes for Incoming Calls is disabled, the following steps will dial digits out onto the connected trunk.
2. Dial *.

3. Enter the Account Code.
   
   You can enter any code of the proper length. Incoming Account Codes cannot be Forced or Verified.

4. Dial *.

To enter an Account Code while placing a trunk call:

   If your system has Forced Account Codes, you must follow this procedure.

1. 1. Access trunk for outside call.
   
   You can access a trunk by pressing a line key or Dialling a code. Refer to Central Office Calls, Placing for more information.
   
   With Forced Account Codes, you hear, "Please enter an Account Code." Your display shows: ENTER ACCOUNT.

2. Dial *.

3. Dial your Account Code (1-16 digits, using 0-9 and #).

4. Dial *.
   
   If the system has Forced Account Codes and you don't enter a code, your call cannot go through. You can, however, dial ** to bypass Forced Account Code entry.

5. Dial number you want to call.
   
   If you hear "stutter" dial tone after Dialling the number, ARS is requesting you to enter an ARS Authorization Code. Refer to the Automatic Route Selection feature for more information on ARS Authorization Codes.

To enter an Account Code at a single line set:

1. Access trunk for outside call.
   
   You can access a trunk by Dialling a code. Refer to Central Office Calls, Placing for more information. With Forced Account Codes, you hear, "Please enter an Account Code." Your display shows: ENTER ACCOUNT.

2. 2. Dial *.

3. 3. Enter Account Code (1-16 digits).

4. 4. Dial *.

5. 5. Dial number you want to call.
   
   If you hear "stutter" dial tone after Dialling the number, ARS is requesting you to enter an ARS Authorization Code. Refer to the Automatic Route Selection feature for more information on ARS Authorization Codes.
Alarm

• Description

Alarm lets a system phone extension work like an Alarm clock. An extension user can have Alarm remind them of a meeting or an appointment. There are two types of Alarms:

• Alarm 1 (sounds only once at the preset time)
• Alarm 2 (sounds every day at the preset time)

Conditions

Single line sets will ring and Music on Hold will be heard when the alarm sounds.

Default Setting

Alarm is enabled.

• Programming

20-01-06: System Options - Alarm Duration

Set the duration of the Alarm signal (0-64800 seconds).

• Related Features

None

• Operation

To set the alarm:

1. At system phone, press a SPK key.
   OR
   At single line set, lift handset.

2. Dial 827.

3. Dial alarm type (1 or 2).
   
   Alarm 1 sounds only once. Alarm 2 sounds each day at the preset time.

4. Dial the alarm time (24-hour clock).
   
   For example, for 1:15 PM dial 1315.
   A confirmation tone will be heard if the alarm has been set. If the alarm was not set, an error tone will be heard instead.

5. At system phone, press SPK to hang up.
   OR
   At single line set, hang up.

   Note: When Alarm 1 is set, the telephone display will show “Alarm 1” until the alarm has sounded (Alarm 1 sounds once only at the assigned time).

   Note: When Alarm 2 is set, no indication is given on the telephone display until the alarm sounds (Alarm 2 sounds daily at the assigned time).

To silence an alarm:

1. At system phone, press CLEAR.
   OR
   At single line set, lift handset.

   The single line set user will hear Music on Hold when the handset is lifted.
To check the programmed alarm time:
1. Press CHECK.
2. Dial 827.
3. Dial alarm type (1 or 2).
   *The programmed time displays.*
4. Press CLEAR.

To cancel an alarm:
1. At system phone, press a SPK key.
   OR
   At single line set, lift handset.
2. Dial 827.
3. Dial alarm type (1 or 2).
4. Dial 9999.
5. At system phone, press SPK to hang up.
   OR
   At single line set, hang up.
Alphanumeric Display

• Description
System display telephones have a 2-line, 16 character per line alphanumeric display that provides various feature status messages. These messages help the display telephone user process calls, identify callers and Customise features.

Conditions
The contrast is not adjustable when the telephone has background music enabled.

Default Setting
Enabled for all display telephones.

• Programming

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to an extension.

20-11-08: Class of Service Options (Hold/Transfer Service) - Transfer Information Display
In an extension’s Class of Service, enable (1) or disable (0) an extension’s incoming Transfer pre-answer display.

• Related Features
None

• Operation
Operation is automatic if enabled in programming.
Attendant Call Queuing

• Description

Attendant extensions can have up to 32 incoming calls queued before additional callers hear busy tone. This helps minimize call congestion in systems that use the attendant as the overflow destination for unanswered calls. For example, you can program Direct Inward Lines and Voice Mail calls to route to the attendant when their primary destination is busy. With Attendant Call Queuing, these unanswered calls would normally “stack up” for the attendant until they can be processed.

The 32 call queue total includes Intercom, DISA, DID/DDI, DIL and transferred calls. If the attendant doesn’t have an appearance for the queued call, it waits in line on the CALL key. If the attendant has more than 32 calls queued, an extension can Transfer a call to the attendant only if they have Busy Transfer enabled.

Attendant Call Queuing is a permanent, non-programmable system feature, for each telephone assigned in Program 20-17-01. It is automatic for incoming exchange line calls to a Ring Group (Program 22-04-01 to place phones into Ring Groups.

Conditions

None

Default Setting

Enabled.

• Programming

  20-17-01: Operator’s Extension Number
  Assign the operator (attendant’s) extension.

  24-02-01: System Options for Transfer - Busy Transfer
  Prevent (0) or allow (1) extensions to Transfer calls to an attendant that has more than 32 calls in queue.

• Related Features

  • Call Forwarding / Personal Greeting
    Forwarding when unanswered or busy can only occur at the attendant if there are more than 32 calls in queue.

• Operation

None
Automatic Route Selection (F-Route)

• Description

Automatic Route Selection (ARS) provides call routing and digit translation based on the digits a user dials. ARS consists of look up tables that compare the dialled digits and decide which translation table should be used. The decision can optionally be dependant on time and day of the week. The translation table will then delete and/or add digits select the trunk group and seize the outgoing trunk.

ARS Feature Summary

• Basic ARS Operation
  When a user places an outside call, ARS analyses the digits dialled and assigns one of 64 Selection Numbers to the call. The Selection Number chosen depends on which digits the user dialled. ARS then checks the time of the day, the day of the week and the extension’s ARS Class of Service. Based on these call routing options, ARS selects a trunk group for the call and imposes the Dial Treatment instructions (if any).

• Call Routing
  ARS can apply up to 24-digit analysis to every number dialled. For programming, ARS provides separate 8-digit and 24 digit tables. Each table can have up to 250 numbers.

• Dialling Translation (Special Dialling Instructions)
  ARS can automatically execute stored dialling instructions (called Dial Treatments) when it chooses a route for a call. The system allows up to 15 Dial Treatments. The Dial Treatments can:
  - Automatically insert or delete a leading 1
  - Insert or delete and area code (NPA)
  - Add digits (such as a dial-OCC number), pauses and waits to the dialling sequence
  - Require the user to enter an authorisation code when placing a call (see Forced Authorisation Code below)

• Time of Day Selection
  For routing purposes, ARS provides ten different day selections (called Time Schedule Patterns). Each Time Schedule Pattern can provide up to 20 time intervals which are assigned to a day of the week (Monday-Friday, Saturday, Sunday or Holiday).

• Hierarchical Class of Service Control
  ARS allows or denies call route choices based on an extension’s ARS\(^1\) Class of Service. This allows lower Classes of Service (e.g., 1) to access routes unavailable to higher Classes of Service (e.g., 16). The system provides up to 16 (0=unrestricted, 1-16) ARS Classes of Service.

\(^1\) Use Program 26-04-01 to assign an extension’s ARS Class of Service. An extension’s Class of Service (set in Programs 20-xx has not effect on ARS routing choices.
Conditions

A. Line keys, outgoing loop keys, outgoing trunk group keys, Dialling 804+trunk group, Dialling 805+trunk number, and abbreviated dial numbers assigned to a certain trunk group can all be used to bypass ARS.

B. Do not use Dial Analysis Table 1 when configuring the system for Australian numbering plan.

Default Setting

ARS is not programmed.

• Programming

11-01-01: Tab System Numbering
   Set up a Service Code for ARS/F-Route Access (normally 0).

11-09-01: Trunk Access Code
   Specify the single digit code used to access ARS (normally 0).

14-05-01: Trunk Groups
   Program trunks of the same carrier type into the same trunk group.

14-07-01: Trunk Access Map Setup
   Set up the Trunk Access Maps (1-51). This sets the access options for trunks.

15-06-01: Trunk Access Map for Extensions
   Assign Trunk Access Maps (1-51) to extensions.

26-01-01: Automatic Route Selection Service – ARS Service
   Enable (1) or disable (0) ARS.

26-01-02: Automatic Route Selection Service - Network Outgoing Inter-Digit ARS Timer
   With Networking, this timer (0-64800 x 100msec.) replaces 20-03-04 when determining if all network protocol digits have been received. If ARS is enabled at Site B, this timer can be programmed for 5 (500 msec) at Site A. If ARS is disabled and Site B is using F-Route for outbound dialling, this timer should be programmed for 30 (3 seconds) at Site A.

26-01-03: Automatic Route Selection Service - ARS Misdialled Number Handling
   If a user dials a number not programmed in ARS, this option determines if the system should route over trunk group 1 (0) or play error tone (1).

26-02-01: Dial Analysis Table for ARS – Dial
   Enter the digits (16 digits maximum: 1-9, 0 *, #, @: 200 separate entries) for the Dial Analysis Table which will be analysed by ARS/LCR. This table will be checked after any programmed F-Route operations have completed. The system will then refer to Program 26-02-02 and 26-02-03 to determine the routing for the call. To enter a wild card/don’t care digit, press Line Key 1 to enter an @ symbol. It is important to remember that the system checks the table numbers in numerical order. This means that entries for specific numbers should be entered first (such as your local area codes), then enter the items containing wild
card digits. If the system sees an entry of “2@@” then any table entries which follow will be ignored. For example, if 268, 269, and 270 are local exchanges, these would be the first three table entries which would route according to the settings made in Program 26-02-02 and 26-02-03 for each of the table entries. If the next entry is “2@@”, then the system checks no further in this program and routes all other “2xx” numbers according to the entries made in Program 26-02-02 and 26-02-03 for this table entry.

26-02-02: Dial Analysis Table for ARS - Service Type
For each Dial Analysis Table (1-200), select ‘0’ for no ARS, ‘1’ for Service Type 1 - Route to Trunk Group Number to have the number route to a trunk group [Refer to Program 26-02-03] or ‘2’ for Service Type 2 - F-Route Selected to have the dialled number controlled by the F-Route table. If Service Type 2 is selected and F-Route operation is on, the F-Route table used is determined by Program 44-04. If F-Route operation is off, the routing is determined by Program 44-05.

26-02-03: Dial Analysis Table for ARS - Service Number
For each Dial Analysis Table (1-200), if Service Type 1 was selected in Program 26-02-02, enter the trunk group number (0-25, 0=no route).

26-02-04: Dial Analysis Table for ARS - ARS Class of Service
For each Dial Analysis Table (1-200), set the Automatic Route Selection (ARS) Class of Service (0-16).

26-02-05: Dial Analysis Table for ARS - Dial Treatment
For each Dial Analysis Table (1-200), set the Automatic Route Selection (ARS) Dial Treatment (0-15) to be used.

26-03-01: ARS Dial Treatment
Assign the 15 Dial Treatments for automatic ARS Dialling translation. The ARS Dial Treatment options are:
• 3 - Delete the NPA if dialled as part of the initial call.
• 2 - Delete the leading digit if dialled as part of the initial call.
• 1 - Add a leading 1 if not dialled as part of the initial call.
• INPA - Insert the NPA specified by NPA.
• DNN - Outdial the NN number of digits or execute the code that follows. For example, D041234 out-dials 1234. Valid entries are 0-9, #, *, Wnn (wait nn seconds) and P (pause). Each digits code counts as a digit. So for example, if a P was added for a pause, the entry would look like: D05P1234. This Dial Treatment can only be added from telephone programming.
• Wnn - Wait nn seconds.
• P - Pause in analogue trunk.
• R - Redial the initially dialled number, including any modifications
• E - End of Dial Treatment. All Dial Treatments must end with the E code.

26-04-01: ARS Class of Service
Set an extension’s ARS Class of Service (0-16). Automatic Route Selection uses ARS Class of Service when determining how to route an extension’s calls.
44-01-01: System Options for ARS
Select whether the ARS feature should use the time schedule (0=not used, 1=used).

44-02-01: Dial Analysis Table for ARS Access – Dial
Set the Dial digits for the Pre-Transaction Table for selecting ARS (8 digits).

44-02-02: Dial Analysis Table for ARS Access - Service Type
Set the Service Type (0-3) for the Pre-Transaction Table for selecting ARS.

44-02-03: Dial Analysis Table for ARS Access - Additional Data
If a Service Type is selected in Program 44-02-02, set the additional data, if required, for the Pre-Transaction Table for selecting ARS.

44-02-04: Dial Analysis Table for ARS Access - Dial Tone Simulation
Determine if the Dial Tone Simulation is on (1) or off (0) for the Pre-Transaction Table for selecting ARS.

44-03-01: Dial Analysis Extension Table – Dial
Set the Dial digits to be used for the Dial Extension Analyze Table.

44-03-02: Dial Analysis Extension Table - Table Number
Select the ARS/R-Route table number (0-500) to be used for the Dial Extension Analyse Table.

44-03-03: Dial Analysis Extension Table - Table Number (251)
Select the ARS/R-Route table number (0-500) to be used for the Dial Extension Analyse Table 251.

44-03-04: Dial Analysis Extension Table - Next Table Number
Select the Next Table Area Number (0-4) to be used for the Dial Extension Analyse Table 252.

44-04-01: ARS Selection for Time Schedule
Assign each ARS Selection number (1-500) to an ARS table number for each ARS time mode. There are 8 time modes for ARS Access.

44-05-02: ARS Table - Delete Digits
For each ARS table (1-500) assign a priority number (1-4). Enter the number of digits to be deleted (0-255).

44-05-03: ARS Table - Additional Dial Number
For each ARS table (1-500) assign a priority number (1-4). Enter the number of additional digits to be Dialled (0-1000).

44-05-04: ARS Table - Beep Tone
For each ARS table (1-500) assign a priority number (1-4). Select whether or not a beep is heard if a lower priority trunk group is used (0=no beep, 1=beep).

44-05-05: ARS Table - Gain Table Number for Internal Call
For each ARS table (1-500) assign a priority number (1-4). Select the gain table number to be used for internal calls (0-500).
44-05-06: ARS Table - Gain Table Number for Tandem Connections
For each ARS table (1-500) assign a priority number (1-4). Select the gain table number to be used for tandem connection (0-500).

44-05-07: ARS Table - ARS Class of Service
For each ARS table (1-500) assign a priority number (1-4). Select the Class of Service to be used for ARS (0-16).

44-05-08: ARS Table - Dial Treatment
For each ARS table (1-500) assign a priority number (1-4). Select the Dial Treatment to be used (0-15).

44-06-01: Additional Dial Table
Set the additional dial table (1-1000) to add prior to the Dialled ARS number.

44-07-01: Gain Table for ARS Access - Incoming Transmit
44-07-02: Gain Table for ARS F-Route Access - Incoming Receive
44-07-03: Gain Table for ARS Access - Outgoing Transmit
44-07-04: Gain Table for ARS Access - Outgoing Receive
Set the gain table to be used (1-500). If an extension dials ARS number;
- The Extension Dial Gain Table is activated, which is assigned in Program 44-05.
- The Extension Dial Gain Table follows “Outgoing transmit” and “Outgoing receive” settings. If the incoming call is transferred to another line using ARS ;
- The Tandem Gain Table is activated, which is assigned in Program 44-05.
- The Tandem Gain Table follows the “Incoming transmit” and “Incoming receive” settings for incoming line, and “Outgoing transmit” and “Outgoing receive” settings for the outgoing line.
For the ARS call (in the above case), CODEC gain in Program 14-01-02 and 14-01-03 are not activated.

44-08-01: Time Schedule for ARS
Define the daily pattern of the ARS feature. ARS has 10 time patterns. These patterns are used in Program 44-09 and 44-10. The daily pattern consists of 20 time settings.

44-09-01: Weekly Schedule for ARS
Define a weekly schedule for using ARS (day numbers 1-7 (1=Sun, 7=Sat), pattern numbers 1-10).

44-10-01: Holiday Schedule for ARS
Define a yearly schedule for ARS. This schedule is used for setting special days such as national holidays (pattern numbers 1-10).

• Related Features

• Abbreviated Dialling
Abbreviated dialling may bypass ARS routing.

• Central Office Calls, Placing
Set up other options for outgoing calls (e.g., unassign line keys, adjust gains, ARS access key, loop keys, etc.).

- **Least Cost Routing (LCR)**
  LCR is applied after trunk routing has been determined and is used to modify the dialled digits which will be sent to line.

- **Toll Restriction**
  Toll Restriction overrides ARS.

- **Trunk Group Routing**
  A system with Automatic Route Selection cannot also have Trunk Group Routing.

- **Trunk Queuing/Camp On**
  With ARS installed, Trunk Queuing automatically queues for the least costly route. The system automatically redials the queued call when the extension user lifts the handset.

**Operation**

**To place a call using ARS:**

1. At keyset, press the SPK key.
   - OR -
   At single line set, lift handset.
   
   *You will hear normal Intercom dial tone.*

1. Dial 0
   
   *You will hear a second “stutter” dial tone.*
   
   *Dial outside number.*
   
   *If you hear another “stutter” dial tone, you must enter your extension’s ARS Authorisation Code.*
F-Routing Dial Analysis

1. IC Call = Internal/External?
   - Internal
     - Is this F-Route? (PRG 11-01)
       - Yes
         - Get F-Route dial No. (PRG 44-02)
         - Get No. selected for F-Route
       - No
         - Get F-Route table No. Time Band (PRG 44-04)
         - Delete dialled No.? (PRG 44-06)
           - Yes
             - Delete dialled No.
           - No
             - Dial out? (PRG 44-05)
               - Yes
                 - Redial PAO control (PRG 44-08, 44-07, 44-01)
               - No
                 - Restriction No
                   - Any telexers rate Y/R? (PRG 34-08)
                     - Restriction Yes
                       - External dial-out
                     - END

2. Is this F-Route? (PRG 11-01)
   - Yes
     - Get F-Route dial No. (PRG 44-02)
     - Get No. selected for F-Route
   - No
     - Process normally
     - END

3. Service type? (PRG 44-00)
   - F-Route access
     - User F-Route Time Band?
       - Yes
         - Get F-Route table No. Time Band (PRG 44-04, 44-05, 44-06, 44-10)
       - No
         - END

4. Delete dialled No.? (PRG 44-06)
   - Yes
     - Delete dialled No.
   - No
     - Dial out? (PRG 44-05)
       - Yes
         - Redial PAO control (PRG 44-08, 44-07, 44-01)
       - No
         - Restriction No
           - Any telexers rate Y/R? (PRG 34-08)
             - Restriction Yes
               - External dial-out
             - END

5. Additional dial No. (PRG 34-06)

END
Background Music

• Description

Background Music (BGM) sends music from a customer-provided music source to speakers in system phones. If an extension user activates it, BGM plays whenever the user's extension is idle.

A. Refer to the System Hardware Manual for installation instructions.
B. The system supports one Background Music source input, via either the built-in music port or the 2PGDU card.
C. If a 2PGDU card is installed and has BGM assigned to one of its ports (Program 10-03-01=9 and 33-01-01=3), the built-in music port is no longer used for BGM, i.e. the 2PGDU card takes priority.

Default Setting

The built-in music port is assigned for Background Music.

• Programming

10-03-01 : PCB Setup – Terminal Type (2PGDU)
Set the terminal type to 9: External Music Source (MOH or BGM).
Assign port numbers in the following order to avoid duplication in Program 10-03-02:
Program 10-03-01 Port 3 = 9 (External Music Source), system assigns 10-03-02 = Port 1.
Program 10-03-01 Port 4 = 6 (External Speaker), system assigns 10-03-02 = Port 2.

10-03-02 : PCB Setup – Logical Port Number (2PGDU)
Assign port numbers for the devices assigned in Program 10-03-01. May be automatically assigned when Program 10-03-01 is set.

20-06-01 : Class of Service for Extensions
Assign a Class of Service (1~15) to an extension.

20-13-30 : Class of Service for Extensions
Class of Service Options (Supplementary Service)
- Background Music
In an extensions Class of Service, enable (1) or disable (0) the ability to activate Background Music.

33-01-01 : Analogue Interface Port Type Setup
Set the Analogue Interface port (1-6) assigned as an External Music Source in Program 10-03-01 to 3 (BGM). Note that the 2PGDU card resides in Slot 4.

• Related Features

- Music on Hold
- Single Line Telephones
• **Operation**

*To turn Background Music on or off:*

1. Press a SPK key.
2. Dial 825.
3. Press SPK to hang up.
Barge In

• Description

Barge In permits an extension user to break into another extension user’s established call, including Conference calls. This sets up a Conference-type conversation between the intruding extension and the parties on the initial call. With Barge In, an extension user can get a message through to a busy co-worker right away.

There are two Barge In modes: Monitor Mode (Silent Monitor) and Speech Mode. With Monitor Mode, the caller Barging In can listen to another user’s conversation but cannot participate. With Speech Mode, the caller Barging In can listen and join another user’s conversation.

CAUTION

The use of monitoring, recording or listening devices to eavesdrop, monitor, retrieve or record telephone conversations or other sounds activities, whether or not contemporaneous with its transmission may be illegal in certain circumstances under federal or state laws. Legal advice should be sought prior to implementing any practice that monitors or records any telephone conversation. The Telecommunications (Interception) Act 1979 (Cth), The Telecommunications Act 1997, The Privacy Act 1988 and State and Territory Listening Devices Legislation are all relevant. Some federal and state laws require some form of notification to all parties or require the consent of all parties to the telephone conversation, prior to monitoring or recording a telephone conversation. Some of these laws incorporate strict penalties. Section 6 of the Industry Guidelines recommend pre-recorded messages or verbal notification to alert callers that the calls may be monitored:

e.g. “your call may be listened to and recorded for quality and coaching purposes. Please tell the consultant if you don’t want this to happen”.

Section 6 of the Industry Guidelines also make recommendations in relation to notifications in writing.

Conditions

Each Barge In requires a conference circuit to be available. If all 32 conference circuits are in use, Barge In cannot be performed.

Default Setting

Disabled

• Programming

11-12-08: Service Code Setup (for Service Access) - Barge In

Determine what the service code should be for an internal party to use the Barge In feature (default=810).

11-16-02: One-Digit Service Code Setup - Barge In
Use this option to set up Item 02 for single digit Barge In. For example, you can assign Item 02 to use digit 5 for Barge In. This would allow you to program a function key with an extension number plus the Barge In code (i.e., 205 5). This allows one-touch access to the Barge In feature for extension 205. If you undefine a service code, be careful when you change this item that you don’t inadvertently disable any essential Dialling function (such as Voice Mail or Message Waiting).

15-07-01: Programming Function Keys  
Assign a function key for Barge In (code 34).

20-06-01: Class of Service for Extensions  
Assign a Class of Service (1-15) to an extension.

20-13-10: Class of Service Options (Supplementary Service) - Barge In Mode  
In an extension’s Class of Service, enable the Barge In Speech Mode (0) or Monitor Mode (1) at the initiating extension (i.e., Barge In initiator).

20-13-15: Class of Service Options (Supplementary Service) - Barge In, Initiate  
In an extension’s Class of Service, enable (1) or disable (0) Barge In at the initiating extension (i.e., Barge In initiator).

20-13-16: Class of Service Options (Supplementary Service) - Barge In, Receive  
In an extension’s Class of Service, enable (1) or disable (0) Barge In at the receiving extension (i.e., Barge In receive).

20-13-17: Class of Service Options (Supplementary Service) - Barge In Tone/Display  
Enable (1) or disable (0) the Barge In Tone. If disabled, this also turns off the Barge In display at the called extension.

20-13-32: Class of Service Options (Supplementary Service) - Multiple Barge In  
Enable (1) or disable (0) the extension’s ability to have multiple user’s Barge In to their conversation.

20-14-11: Class of Service Options for DISA - DISA Trunk Barge In  
Use this option to enabled (1) or disable (0) a DISA user from using the Barge In feature with the service code defined in Program 11-12-08.

20-18-07: Service Tone Timer - Intrusion Tone Repeat Time  
After a user Barges In, the system repeats the Barge In tone after this interval. Normally, you should disable this timer by entering 0. (This timer also affect any other types of call interruption features, such as Voice Mail Conversation Recording.

21-01-03: System Options for Outgoing Calls - Trunk Interdigit Time (External)  
Program how long an extension must wait before using the Barge In feature can be used on a call (this timer waits until this timer expires before putting a call in a talk state).
• Related Features
  • Conference
    An extension user cannot Barge In on a Conference.
  • Intercom
    An extension user cannot Barge In on an Intercom call if one of the Intercom call-
    ers is using Handsfree Answerback. Both Intercom parties must have lifted the
    handset or pressed SPK.
  • Off Hook Signalling
    An extension user cannot Barge In on an Intercom call if one of the Intercom call-
    ers is using Handsfree Answerback. Both Intercom parties must have lifted the
    handset or pressed SPK.
  • Programmable Function Keys
    Function keys simplify Barge In operation.

• Operation
  To Barge In after calling a busy extension:
    *The call must be set up for about 10 seconds before you can Barge In.*
    *Listen for busy/ring or busy tone.*

  1. Call busy extension.
  2. Press Barge In key (PGM 15-07 or SC 851: 34).

  To Barge in without first calling the busy extension:

  1. Press a SPK key.
  2. Dial 810.
     OR
     Press Barge In key (PGM 15-07 or SC 851: 34).
  3. Dial busy extension.
     *To Barge In to a Conference call, dial the extension number of a user active on a Conference call. When a new call is added to the conference, an intrusion tone is heard by all parties, depending on system pro-
     gramming, and all display system phones show the joined party. If Barge In is not possible:
     - the extension user will hear a warning tone
     - the DISA user will be rerouted to the defined ring group
     OR

     Not available for DISA trunks:

     1. Dial the extension number of the busy internal party.
     2. Dial the single digit service code.

       *Instead of the single digit service code, the service code 810 can also be Dialled at this point.*
Call Forwarding

• Description

Call Forwarding permits an extension user to redirect their calls to another extension. Call Forwarding ensures that the user’s calls are covered when they are away from their work area. The types of Call Forwarding are:

- Call Forwarding when Busy or Not Answered
- Call Forwarding Immediate
- Call Forwarding with Dual Ringing
- Call Forwarding when Unanswered
- Personal Answering Machine Emulation (Not available with the DSPDB Voice Mail).

Call Forwarding will reroute calls ringing an extension, including calls transferred from another extension. The extension user must enable Call Forwarding from their phone. To redirect calls while a user is at another phone, use “Call Forwarding with Follow Me”. A periodic VRS announcement may remind users that their calls are forwarded.

• Conditions

A. Normally, the system does not allow the chaining of Call Forwards. For example, extension 216 forwards to 218, and 218 in turn forwards to 220. Calls to 216 route to 218. Calls to 218 route to 220. The system does allow a single chain, however, if the second extension in the chain is forwarded off-premise (*46 + trunk access code + destination telephone number).

B. Periodic reminder message requires a DSP daughter board for Voice Response System (VRS).

C. Call Forwarding an extension in a Department Group will prevent that extension from receiving Department Pilot Calls.

D. If a Programmable Function key is not defined for Call Forwarding (10 - 17), the DND key flashes to indicate that the extension is call forwarded.

E. Ring Groups do not follow Call Forward to voice mail.

F. Multiple Directory and Call Coverage Key calls do not follow Call Forwarding.

Default Setting

Enabled.

• Programming

11-01-01: System Numbering

Setup a Service Code for Call Forward function (default: 8xx)

11-11-xx: Service Code Setup (for Setup/Entry Operation)

Assign individual Service Codes for each of the Call Forward functions (it is recommended that these remain at the default settings).

01 : Call Forward – Immediate (default: 848)
02 : Call Forward – Busy (default: 843)
03 : Call Forward – No Answer (default: 845)
04 : Call Forward – Busy/No Answer (default: 844)
05 : Call Forward – Dual Ring (default: 842)
06 : Call Forwarding – Select Option (default: 888)
07 : Call Forwarding – Follow Me (default: 846)
15-07-xx: Programming Function Keys
Assign Programmable Function Keys for the required Call Forward functions. Alternatively, the user may program these keys using Service Code 851 + Call forward code (below).
10 : Call Forward – Immediate
11 : Call Forward – Busy
12 : Call Forward – No Answer
13 : Call Forward – Busy/No Answer
14 : Call Forward – Both Ring
15 : Call Forward – Follow Me
16 : Call Forward – Select
17 : Call Forward – Device

14-02-08: Analogue Trunk Data Setup – Answering Condition.
All Analogue trunks involved in a Call Forward Off Premise must be assigned with Polarity Reversal.

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-11-02: Class of Service Options - Call Forwarding (When Busy)
In an extension's Class of Service, enable (1) or disable (0) an extension's ability to set Call Forwarding when Busy.

20-11-03: Class of Service Options - Call Forwarding (When Unanswered)
In an extension's Class of Service, enable (1) or disable (0) an extension's ability to set Call Forwarding when Unanswered.

20-11-04: Class of Service Options - Call Forwarding (Dual Ringing)
In an extension's Class of Service, enable (1) or disable (0) an extension's ability to set Call Forwarding with Both Ringing.

24-02-03: System Options for Transfer - Delayed Call Forwarding Time
Set the Delayed Call Forwarding interval. For an unanswered call, Call Forwarding when Unanswered occurs after this interval.

• Related Features
  • Call Forwarding, Fixed
    Fixed Call Forwarding is a permanent type of forwarding that automatically reroutes calls under certain condition - without any user action. User entered Call Forwarding overrides Fixed Call Forwarding.
  • Call Forwarding, Off-Premise
    An extension user can forward their calls to an off-premise location.
  • Call Forwarding with Follow Me
    While away from their desk, a user can redirect their calls to a co-worker’s extension.
  • Call Forwarding/Do Not Disturb Override
    Override Call Forwarding or DND at another extension.
  • Central Office Calls, Answering
    When a call is transferred because of Call Forwarding No Answer, Call Forwarding Busy, or DND, the Reason for Transfer option can display to the transferred extension why the call is ringing to their phone.
• **Department Calling**
  An extension user can forward their calls to a Department number.

• **Do Not Disturb**
  If an extension user activates DND option 4, the system prevents other extensions from forwarding calls to them. If an extension already receiving forwarded calls activates DND option 4, callers to the forwarded extension hear DND tone.

• **Programmable Function Keys**
  Function keys simplify Call Forwarding operation.

• **Voice Response System (VRS)**
  The periodic reminder message requires a Voice Response System (VRS).

**Operation**

**To Activate or Cancel Call Forward:**

1. Press a programmed Call Forward key (PGM 15-07 or SC 851:10, 11, 12, 13, 14,15).
2. To Enable: Dial 1 + Extension Number;
   To Disable: Dial 0.
3. Press SPK to hang up.
   -OR-
   4. Press SPK key (or lift handset)
5. Dial Call Forward service code:
   - 842 = Call Forward Dual Ring
   - 843 = Call Forward Busy
   - 844 = Call Forward Busy/No Answer
   - 845 = Call Forward No Answer
6. 846 = Call Forward Follow Me
    848 = Call Forward Immediate
7. To Enable: Dial 1 + Extension Number;
   To Disable: Dial 0.
8. Press SPK to hang up.
   -OR-
9. Press a programmed Call Forward - Select key (PGM 15-07 or SC 851:16).
   -OR-
   Press SPK key (or lift handset) and dial 888.
10. Dial Call Forwarding condition:
    - 1 = Personal Answering Machine Emulation (then skip to step 5).
    - 2 = Busy or No Answer
    - 3 = Follow Me
    - 4 = Immediate All Calls
    - 6 = No Answer
    - 7 = Immediate with Dual Ringing
    - 0 = Cancel
11. Dial destination extension.
12. Dial Call Forwarding type:
   2 = All calls
   3 = Outside calls only
   4 = Intercom calls only

13. Press SPK to hang up (hang up at SLT).

   **Note:** When using a Call Forward – Select key (PGM 15-07 or SC851 : 16), the last call forward setting made with this key (i.e., call forward type and destination) can be repeated by pressing this key and waiting for 5 seconds. A confirmation tone will be heard once the call forward is set. To cancel the call forward setting, press this key and again wait for 5 seconds.
Call Forwarding, Fixed

• Description

Fixed Call Forwarding is a type of forwarding that is permanently in force at an extension. Calls to an extension with Fixed Call Forwarding enabled automatically reroute - without any user action. Unlike normal Call Forwarding (which is turned on and off by extension users), Fixed Call Forwarding is set by the administrator in system programming. Fixed Call Forwarding complements Voice Mail, for example. The administrator can program Fixed Call Forwarding to send a user’s unanswered calls to their Voice Mail mailbox. Each individual user no longer has to manually set this operation.

In system programming, the administrator can set the Fixed Call Forwarding destination and type for each extension and virtual extension. The forwarding destination can be an on- or off-premise extension or Voice Mail. The Fixed Call Forwarding types are:

- Fixed Call Forwarding with Dual Ringing (Program 24-06 Option 1)
- Fixed Call Forwarding when Unanswered (Program 24-06 Option 2)
- Fixed Call Forwarding Immediate (Program 24-06 Option 3)
- Fixed Call Forwarding when Busy or Unanswered (Program 24-06 Option 4)
- Fixed Call Forwarding Off-Premise (Program 24-07)

Fixed Call Forwarding reroutes the following types of incoming calls:

- Ringing intercom calls from co-worker’s extensions
- Calls routed from the VRS or Voice Mail
- Direct Inward Lines
- DISA and DID line calls to the forwarded extension
- Transferred calls

Fixed Call Forwarding Chaining

Fixed Call Forward Chaining allows Fixed Call Forwards to loop from one extension to the next. For example, you could have the chain 201 + 202 + 203 + 204 set up for Fixed Call Forwarding when Busy. If extension 201 is busy, calls to 201 route to 202. If 202 is also busy, the calls route to 203 and so on. Chaining allows you to set up very basic hunting between co-workers.

Keep the following in mind when setting up Fixed Call Forwarding Chaining:

- If Fixed Call Forwarding Chaining forms a complete Call Forwarding loop (i.e., 201 + 202 + 203 + 201), the system rings the last extension in the chain (203). It does not complete the loop.
- If Fixed Call Forwarding Chaining finds an extension with user-implemented Call Forwarding in the middle of a chain, it rings that extension. It does not continue routing to the other extensions in the chain.
- If one of the extensions in a Fixed Call Forwarding chain has its fixed option set for Both Ringing (1), the system rings that extension. It does not continue routing to the other extensions in the chain.
- The receiving extension’s display shows:
Conditions

A. Call Forwarding an extension in a Department Group will prevent that extension from receiving Department Pilot Calls.
B. Multiple Directory and Call Coverage Key calls follow Call Forwarding.
C. Ring Group calls do not follow Call Forward to voice mail.

Default Setting

Disabled.

• Programming

14-02-08: Analogue Trunk Data Setup – Answering Condition
All analogue trunks involved in a Call Forward Off Premise must be assigned with Polarity Reversal on Answer.

24-02-03: System Options for Transfer - Delayed Call Forwarding Time
Set the Delayed Call Forwarding interval. For an unanswered call, Fixed Call Forwarding When Unanswered occurs after this interval.

24-06-01: Fixed Call Forwarding
For an extension port, assign the Fixed Call Forwarding Type (0-4) and the destination extension port. Available types are: 0 = Fixed Call Forwarding off 1 = Fixed Call Forwarding with Dual Ringing (do not use for Voice Mail ports) 2 = Fixed Call Forwarding when Unanswered 3 = Fixed Call Forwarding Immediate 4 = Fixed Call Forwarding when Busy or Not Answered

24-07-01: Fixed Call Forwarding Off-Premise
For each extension, assign the Fixed Call Forwarding Off-Premise telephone number (up to 24 digits). Be sure to include the trunk access code.

• Related Features

- Alphanumeric Display
  When a call is Fixed Call Forwarded, the display at the destination shows from which extension the call was routed.
- Call Forwarding
  User entered Call Forwarding overrides Fixed Call Forwarding.
- Call Forwarding, Off-Premise
  An extension user can forward their calls to an outside telephone number.
- Multiple Directory Numbers
  Calls to virtual extension numbers follow the Fixed Call Forwarding assignment of their virtual port.

• Operation

None
Call Forwarding, Off-Premise

• Description

Off-Premise Call Forwarding allows an extension user to forward their calls to an off-site location. By enabling Off-Premise Call Forwarding, the user can stay in touch by having the system forward their calls while they are away from the office. The forwarding destination can be any phone number the user enters, such as a car phone, home office, hotel or meeting room. Off-Premise Call Forwarding can route the off-site phone number over a specific trunk or through a trunk group, Automatic Route Selection or Trunk Group Routing.

Off-Premise Call Forwarding reroutes the following types of incoming calls:

- Ringing intercom calls from co-worker’s extensions
- Calls routed from the VRS or Voice Mail *
- Direct Inward Lines *
- DISA, DID and DDI calls to the forwarded extension *
- Transferred calls *

Off-Premise Call Forwarding does not reroute Call Coverage keys, Multiple Directory Number keys, or Ring Group calls (i.e., trunk ringing according to Ring Group assignments made in Programs 22-04 and 22-05).

* Off-Premise Call Forwarding can reroute an incoming trunk call only if the outgoing trunk selected has answer/disconnect supervision enabled (see Programming above).

Off-Premise Call Forward for Doorphones

Off-Premise Call Forwarding allows Doorphone callers to be transferred automatically to the pre-programmed external party. The destination telephone number is stored in the Common Abbreviated Dial area. This feature may be used in case a co-worker is out of the office. All incoming calls for their extension will be automatically transferred to their external number (example: cell phone). Off-Premise Call Forward for Doorphones can be transferred to the external party through ISDN lines only.

Conditions

A. Call Forwarding Off-Premise requires ISDN, or loop start trunks with disconnect supervision.
B. The trunk access code and the outside telephone number combined cannot exceed 4 digits.
C. Normally, the system does not allow the chaining of Call Forwards. For example, extension 216 forwards to 218, and 218 in turn forwards to 220. Calls to 216 route to 218. Calls to 218 route to 220. The system does allow a single chain, however, if the second extension in the chain is forwarded off-premise (*46 + trunk access code + destination telephone number).
D. Call Forwarding an extension in a Department Group will prevent that extension from receiving Department Pilot Calls.
E. If a Programmable Function key is not defined for Call Forwarding (10 - 17), the DND key flashes to indicate that the extension is call forwarded.
F. A Forced/Verified Account Code (when enabled) must be entered before the Call Forward destination number.

Default Setting

Disabled.
• Related Features
  • **Call Forwarding, Fixed**
    Fixed Call Forwarding can automatically forward an extensions calls to an outside number.
  • **Call Forward to Abbreviated Dial**
    Call forward codes can be used to forward to abbreviated dial that will route off premise.
  • **Doorphone**
    Doorphones must be programmed in order for the calls to be transferred off-premise.
  • **Toll Restriction**
    The outside number OPX Call Forwarding dials can only be a number normally allowed by the forwarded extension’s Toll Restriction.
  • **Voice Response System (VRS)**
    In systems with a DSP daughter board for VRS, callers to an extension forwarded off-premise hear, “Please hold on, your call is being rerouted.”

• Programming
  11-10-04: Service Code Setup (for System Administrator) - Storing Common Abbreviated Dialling Numbers.
  Assign the service code to be used for Common Abbreviated Dialling (853 by default).
  11-10-18: Service Code Setup (for System Administrator) - Off-Premise Call Forward by Doorphone
  Assign the service code to be used for Off-Premise Calling Forwarding by a Doorphone (822 by default).
  14-01-13: Basic Trunk Data Setup - Loop Supervision
  Enable (1) loop supervision for each trunk that should be able to use Call Forwarding Off-Premise.
  14-02-08: Analogue Trunk Data Setup – Answering Condition
  All analogue trunks involved in Call Forward Off Premise must be assigned with Polarity Reversal (Line Reversal on Answer).
  14-02-12: Detect Network Disconnect Signal
  Enable the network disconnect signal detection for proper release of analogue trunks.
  14-02-13: Trunk to Trunk Limitation
  When 14-02-12=1 (enabled) and 14-02-13=0 (disabled),
  Trunk to Trunk Transfer/Call Forward Off-Premise uses the following disconnect timers:
  25-07-07 (DISA Conversation Warning Tone Time)
  25-07-08 DISA Long Conversation Disconnect)
  When 14-02-12=1 (enabled) and 14-02-13=1(enabled),
  Trunk to Trunk Transfer/Call Forward Off-Premise uses the following disconnect timer:
  24-02-07 (Forced Release Timer for Trunk to Trunk Transfer)
15-07-01: Programmable Function Keys
For one-touch access to the Call Forwarding Device setup code (713), assign a function key (17) for Call Forwarding (Device).
For Off-Premise Call Forwarding by a Doorphone, assign a function key (54) if required.

20-06-01: Class of Service for Extensions
Assign Class of Service (1-15) to an extension.

20-11-12: Class of Service Options (Hold/Transfer Service) - Call Forwarding Off-Premise
In an extensions Class of Service, enable (1) or disable (0) setting up Call Forwarding Off-Premise at the extension.

21-03-01: Trunk Group Routing for Trunks
Assigns the routes set in Program 14-06 for use with automatic external call forward.
For each mode, assign the trunks used for call forward off-premise to Route Table Number 1.

24-02-07: Forced Release Timer for Trunk to Trunk Transfer
All trunk to trunk transferred calls will be disconnected after this timer has expired (default=30 minutes). Set this timer to 0 to prevent call cut off. This applies to a manual trunk to trunk transfer call.

25-07-07: DISA Conversion Warning Tone Time
Determine the length of time a DISA/T2T/CFOP caller can talk before the Long Conversation tone is heard (0-64800 seconds).

25-07-08: DISA Long Conversation Disconnect
This timer determines how long the system will wait before disconnecting a call after the Long Conversation tone from Program 25-07-07 is heard (0-64800 seconds)

32-01-03: Doorphone Timers - Off-Premise Call Forward by Doorphone Disconnect Timer
Define the conversation period for an Off-Premise Call Forward by Doorphone call. When this timer expires, the caller will hear busy tone for 3 seconds (fixed timer) and the call will then be disconnected (0-64800).

• Operation
To activate Call Forwarding Off-Premise

1. Press SPK key (or lift handset) and dial 713.
   -OR-
   Press Call Forward (Device) key (PGM 15-07 or SC 851: 17).

2. Dial 6 + trunk access code:
   0(ARS/Trunk Group Routing),
   804 + Line Group (01-25),
   805 + Line number (e.g., 05 for line 5).

3. Dial the outside number to which your calls should be forwarded.

4. For System Phone only, press HOLD.

5. Press SPK (or hang up at SLT) to hang up.
To cancel Call Forward Off-Premise:

1. Press SPK key (or lift handset) and dial 713.
   -OR-
   Press Call Forward (Device) key (PGM 15-07 or SC 851: 17).

2. Dial 6 + HOLD.

3. Press SPK (or hang up at SLT) to hang up.
   Your DND or Call Forwarding (Device) Programmable Function Key stops flashing.

Off-Premise Call Forwarding for Door Phones

These operations are performed at the Door Box Ringing Extension only.

To activate Call Forward Off-Premise for Door Phone:

1. Press SPK key (or lift handset) and dial 822.
   -OR-
   Press Call Forward (Device) key (PGM 15-07 or SC 851: 54).

2. Dial the door phone number (1-6).

3. Dial the Abbreviated Dialling number to which the calls should be forwarded.

4. Press SPK (or hang up at SLT) to hang up.
   Your DND or Off-Premise Call Forwarding Programmable Function Key flashes.

To cancel Call Forward Off-Premise for Door Phone:

1. Press SPK key (or lift handset) and dial 822.
   -OR-
   Press Call Forward (Device) key (PGM 15-07 or SC 851: 54).

2. Dial 0.

3. Press SPK (or hang up at SLT) to hang up.
   Your DND or Off-Premise Call Forwarding Programmable Function Key stops flashing.
Call Forwarding to Abbreviated Dial

• Description

Call Forwarding to Abbreviated Dial allows an extension user to forward their calls to an off-site location. By enabling Call Forwarding to abbreviated dial, the user can stay in touch by having the system forward their calls while they are away from the office. The forwarding destination can be any phone number the user enters, such as a car phone, home office, hotel or meeting room. Off-Premise Call Forwarding will route the off-site phone number over the trunk route set for the abbreviated dial bin.

Off-Premise Call Forwarding reroutes the following types of incoming calls:

- Ringing intercom calls from co-worker’s extensions
- Calls routed from the VRS or Voice Mail *
- Direct Inward Lines *
- DISA, DID and DDI calls to the forwarded extension *
- Transferred calls *

Call Forwarding does not reroute Call Coverage keys, Multiple Directory Number keys, or Ring Group calls (i.e., trunk ringing according to Ring Group assignments made in Programs 22-04 and 22-05).

* Off-Premise Call Forwarding can reroute an incoming trunk call only if the outgoing trunk selected has disconnect supervision enabled (see Programming above).

Off-Premise Call Forward for Doorphones

Off-Premise Call Forwarding allows Doorphone callers to be transferred automatically to the pre-programmed external party. The destination telephone number is stored in the Common Abbreviated Dial area. This feature may be used in case a co-worker is out of the office. All incoming calls for their extension will be automatically transferred to their external number (example: cell phone). Off-Premise Call Forward for Doorphones can be transferred to the external party through ISDN lines only.

Conditions

A. Call Forwarding Off-Premise requires ISDN, loop start trunks with disconnect supervision.
B. The system does not allow the chaining of Call Forwards. For example, extension 216 forwards to 218, and 218 in turn forwards to 220. Calls to 216 route to 218. Calls to 218 route to 220. The system does allow a single chain, if the second extension in the chain is forwarded off-premise (848 + 1 + 813 + bin).
C. Call Forwarding an extension in a Department Group will prevent that extension from receiving Department Pilot Calls.
D. If a Programmable Function key is not defined for Call Forwarding (10 - 17), the DND key flashes to indicate that the extension is call forwarded.

Default Setting

Disabled.

• Related Features

• Call Forwarding, Fixed
  Fixed Call Forwarding can automatically forward an extensions calls to an outside number.
• **Call Forward, Off Premise**
  Call forward codes can be used to forward to a specific outside number.

• **Doorphone**
  Doorphones must be programmed in order for the calls to be transferred off-premise.

• **Toll Restriction**
  The outside number Call Forwarding dials can only be a number normally allowed by the forwarded extension’s Toll Restriction.

• **Voice Response System (VRS)**
  In systems with a DSP daughter board for VRS, callers to an extension forwarded off-premise hear, “Please hold on, your call is being rerouted.”

**Programming**

**11-10-04: Service Code Setup - Storing Common Abbreviated Dialling Numbers**
Assign the service code to be used for Common Abbreviated Dialling (853 by default).

**11-10-18: Service Code Setup - Off-Premise Call Forward by Doorphone**
Assign the service code to be used for Off-Premise Calling Forwarding by a Doorphone (822 by default).

**14-01-13: Basic Trunk Data Setup - Loop Supervision**
Enable (1) loop supervision for each trunk that should be able to use Call Forwarding Off-Premise.

**15-07-01: Programmable Function Keys**
For one-touch access to the Call Forwarding setup codes (843, 844, 845, 848), assign a function key (10, 11, 12, 13) for Call Forwarding. For Off-Premise Call Forwarding by a Doorphone, assign a function key (54) if required.

**20-06-01: Class of Service for Extensions**
Assign Class of Service (1-15) to an extension.

**20-11-12: Class of Service Options (Hold/Transfer Service) - Call Forwarding Off-Premise**
In an extensions Class of Service, enable (1) or disable (0) setting up Call Forwarding Off-Premise at the extension.

**32-01-03: Doorphone Timers - Off-Premise Call Forward by Doorphone Disconnect Timer**
Define the conversation period for an Off-Premise Call Forward by Doorphone call. When this timer expires, the caller will hear busy tone for 3 seconds (fixed timer) and the call will then be disconnected (0-64800).

**Operation**

To activate Call Forwarding Off-Premise

1. At system phone, press a SPK key + Dial 848.
   OR
   Press Call Forward key (PGM 15-07 or SC 851: 10)
   OR
   At SLT, lift handset Dial 848.
2. Dial 1 + 813 +1.
   
   *813 is the Abbreviated dial access code, can be replaced with the Group Abbreviated dial access code 814.*
   
3. Dial the bin number to which your calls should be forwarded.
4. Press SPK (or hang up at SLT) to hang up if you Dialled 848 in step 1.
   
   *Your DND or Call Forwarding (Device) Programmable Function Key flashes.*

**To cancel Call Forwarding Off-Premise**

1. At system phone, press a SPK key + Dial 848.
   OR
   Press Call Forward (Device) key (PGM 15-07 or SC 851: 10)
   OR
   At SLT, lift handset and dial 848.

2. Dial 0.

3. Press SPK (or hang up at SLT) to hang up if you Dialled 848 in step 1.
   
   *Your DND or Call Forwarding (Device) Programmable Function Key stops flashing.*

**Off-Premise Call Forwarding for Doorphones:**

*These operations are performed at the Doorphone Ringing Extension only.*

**To activate Call Forwarding Off-Premise by Doorphone**

1. At system phone, press a SPK key + Dial 822.
   OR
   Press Call Forward (Device) key (PGM 15-07 or SC 851: 54)
   OR
   At SLT, lift handset and dial 822.

2. Dial the Doorphone number (1-8).

3. Dial the Abbreviated Dialling number to which the calls should be forwarded.

4. Press SPK (or hang up at SLT) to hang up.
   
   *Your DND or Off-Premise Call Forwarding Programmable Function Key flashes.*

**To cancel Call Forwarding Off-Premise by Doorphone**

1. At system phone, press a SPK key + Dial 822.
   OR
   Press Call Forward (Device) key (PGM 15-07 or SC 851: 54)
   OR
   At SLT, lift handset and dial 822.

2. Dial 0.

3. Press SPK (or hang up at SLT) to hang up.
   
   *Your DND or Off-Premise Call Forwarding Programmable Function Key stops flashing.*
Call Forwarding with Follow Me

• Description

While at a co-worker’s desk, a user can have Call Forwarding with Follow Me redirect their calls to the co-worker’s extension. This helps an employee who gets detained at a co-worker’s desk longer than expected. To prevent losing important calls, the employee can activate Call Forwarding with Follow Me from the co-worker’s phone.

Call Forwarding with Follow Me reroutes calls from the destination extension. To reroute calls from the initiating (forwarding) extension, use Call Forwarding.

Conditions

A. Call Forwarding an extension in a Department Group will prevent that extension from receiving Department Pilot Calls.
B. If a Programmable Function key is not defined for Call Forwarding (10 - 17), the DND key flashes to indicate that the extension is call forwarded.

Default Setting

Enabled.

• Programming

11-01-01: System Numbering
 Setup a Service Code for Call Forward functions (default: 8xx).

11-11-07: Service Code Setup (for Setup/Entry Operation)
 Assign individual Service Code for Call Forward Follow Me function (it is recommended that this remains at the default setting.

15-07-01: Programming Function Keys
 Assign a function key for one-touch access to the Call Forward Follow Me (code 15)

20-06-01: Class of Service for Extensions
 Assign a Class of Service (1-15) to an extension.

20-11-05: Class of Service Options (Hold/Transfer Service) - Call Forwarding with Follow Me
 In an extension’s Class of Service, allow (1) or prevent (0) the setting of Call Forwarding with Follow Me.

• Related Features

• Programmable Function Keys
 Function keys simplify Call Forwarding with Follow Me operation.

• Operation

To Activate or Cancel Call Forward Follow Me:

1. Press a programmed Call Forward key (PGM 15-07 or SC 851:15).

2. To Enable : Dial 1 + your extension number,
   To Disable : Dial 0

3. Press SPK or hang up.
   -OR-
4. Press SPK key (or lift handset).

5. Dial **846**.

6. To Enable : Dial 1 + your extension number,
   To Disable : Dial 0

7. Press SPK or hang up.
   -OR-

8. Press SPK key (or lift handset).

9. Dial **888**.

10. To Enable : Dial 3 + your extension number,
    To Disable : Dial 0 (Skip to step 6).

11. Dial your extension number.

12. Dial Call Forward type:
    0 = Cancel  
    2 = All Calls  
    3 = Outside calls only  
    4 = Intercom calls only

13. Press SPK to hang up (hang up at SLT)

   *When set, your DND or Call Forwarding (Device) Programmable Function Key flashes red.*
Call Forwarding/Do Not Disturb Override

• Description

An extension user can override Call Forwarding or Do Not Disturb at another extension. This is helpful, for example, to dispatchers and office managers that always need to get through.

Conditions

None

Default Setting

Disabled.

• Programming

  15-07-01: Programming Function Keys
  Assign a function key for Call Forwarding/Do Not Disturb Override (code 37).

  20-06-01: Class of Service for Extensions
  Assign a Class of Service (1-15) to an extension.

  20-13-04: Class of Service Options (Supplementary Service) - Call Forwarding/DND Override
  In an extension’s Class of Service, enable (1) or disable (0) the ability to initiate Call Forwarding/DND Override.

• Related Features

  • Programmable Function Keys
  Function keys simplify Call Forwarding/DND Override operation.

• Operation

To override an extension’s Call Forwarding or Do Not Disturb:

1. Call the forwarded or DND extension.

2. Press Override key (PGM 15-07 or SC 851: 37).
Call Redirect

• Description

Call Redirect allows a system phone user to transfer a call to a pre-defined destination (such as an operator, voice mail, or another extension) without answering the call. This can be useful if you are on a call and another rings in to your extension. By pressing the Call Redirect key, the call is transferred, allowing you to continue with your current call.

This feature works with the following types of calls:

• Normal trunk call
• DID
• DISA
• DIL
• ICM

The following types of calls cannot be redirected with the feature:

• Transferred
• Department Group (all ring mode)
• Doorphone
• Virtual Extension

Conditions

C. After pressing the Call Redirect key, the call will not recall the extension.
D. The pre-defined destination has to be an extension number or voice mail pilot number.

Default Setting

Disabled.

• Programming

15-07-01: Programmable Function Keys
Assign a function key for Call Redirect (code 49 + destination extension number).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-11-16: Class of Service Options (Hold/Transfer Service) - Call Redirect
Enable (1) or disable (0) a system phone user’s ability to transfer a call to a pre-defined destination (such as an operator, voice mail, or another extension) without answering the call

• Related Features

None
• **Operation**

**To redirect a ringing call:**

1. 1. With an incoming call ringing your extension, press the Call Redirect key (Program 15-07 or SC 851: 49 + Destination Extension Number) without lifting the handset or pressing the CALL keys.

   *A confirmation tone is heard over the telephone’s speaker.*
Call Timer

• Description

Call Timer lets a system phone user time their trunk calls on the telephone display. This helps users that must keep track of their time on the phone. For incoming trunk calls, the Call Timer begins as soon as the user answers the call. For outgoing trunk calls, the Call Timer starts about 10 seconds after the user dials the last digit.

Conditions
None

Default Setting
Enabled.

• Programming

14-02-08: Analogue Trunk Data Setup – Answering Condition

20-13-36: Class of Service Options (Supplementary Service - Caller Timer)
In an extension's Class of Service, enable (1) or disable (0) an extension's ability to use the Call Timer.

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

21-01-03: System Options for Outgoing Calls - Trunk Interdigit Time (External)
The system waits for this timer to expire before starting the Call Timer.

• Related Features

• Alphanumeric Display
Disabling the trunk name seize display (Program 20-09-04=0) also disables the Call Timer.

• Operation

To time your trunk calls:

1. Place trunk call.

The timer starts automatically.
Call Waiting / Camp On

• Description

With Call Waiting, an extension user may call a busy extension and wait in line (Camp-On) without hanging up. When the user Camps-On, the system signals the busy extension with two beeps indicating the waiting call. The call goes through when the busy extension becomes free. Call Waiting helps busy extension users know when they have additional waiting calls. It also lets callers wait in line for a busy extension without being forgotten.

Conditions
None

Default Setting
Enabled.

• Programming

11-12-47: Service Code Setup (for Service Access) - Call Waiting Answer / Split Answer for SLT
If required, use this program to change the code users dial to Split while on a call. This code is normally 894.

15-07-01: Programming Function Keys
Assign a function key for Camp-On (code 35). This key is also the Call-back key.

20-18-06: Service Tone Timer - Call Waiting Tone Timer
Use this option to set the interval between Call Waiting tones. This timer also sets the interval between Off Hook Signalling alerts.

• Related Features

• Callback
If an extension user Camps-On and then hangs up, the system converts the Camp On to a Callback.

• Off Hook Signalling
The Off Hook Signalling Enhancements give an extension the ability to block a caller from dialling 804 to Camp On and/or DID callers from automatically camp-ing on.

• Programmable Function Keys
Function keys simplify Call Waiting/Camp On operation.

• Transfer
An extension user may be able to Transfer a call to a busy extension.

• Trunk Queuing/Camp-On
Trunk Queuing lets an extension user Camp-On to a trunk.

• Operation

To Camp-On to a busy extension:
1. Call busy extension.
2. Dial 850 or Press Camp-On key (PGM 15-07 or SC 851: 35).
3. Do not hang up.

   *To Camp-On to a trunk, see Trunk Queuing.*

**To cancel a Camp-On request:**

1. Hang up.

2. At system phone, press a SPK key and Dial 870.
   OR
   At system phone, press Camp-On key (PGM 15-07 or SC 851: 35).
   OR
   At single line set, lift handset and dial 870.

**To Split (answer a waiting call) at a single line telephone:**

   *Listen for Camp On beep.*

1. **Single Line Telephone:**
   Hookflash and dial 894

   *To repeatedly split between the two calls.*
Callback

• Description

When an extension user calls a co-worker that doesn't answer, they can leave a Callback request for a return call. The user does not have to repeatedly call the unanswered extension back, hoping to find it idle.

The system processes Callback requests as follows:

1. Caller at extension A leaves a Callback at extension B.
   *Caller can place or answer additional calls in the mean time.*

2. When extension B becomes idle, the system rings extension A. This is the Callback ring.

3. Once caller A answers the Callback ring, the system rings (formerly busy) extension B.
   *If caller A doesn't answer the Callback ring, the system cancels the Callback.*

4. As soon as caller B answers, the system sets up an Intercom call between A and B.

Callback Automatic Answer determines how an extension user answers the Callback ring. When Callback Automatic Answer is enabled, a user answers the Callback ring when they lift the handset. When Callback Automatic Answer is disabled, the user must press the ringing line appearance to answer the Callback ring.

Conditions

An extension can leave only one Callback request at a time.

Default Setting

Enabled.

• Programming

15-02-11: Multi-Line Telephone Basic Data Setup - Callback Automatic Answer
   Enable (1) or disable (0) Callback Automatic Answer.

15-07-01: Programming Function Keys
   Assign a function key for Callback (code 35). This key is also the Camp-On key.

20-01-07: System Options - Callback Ring Duration Time
   Set the duration of the Callback ring (0-64800 seconds).

20-01-09: System Options - Callback/Trunk Queuing Cancel Time
   The system cancels Callback and Trunk Queuing requests after this interval (0-64800 seconds).

• Related Features

• Call Waiting (Camp-On)
   If an extension user initiates a Callback but does not hang up, their extension Camps-On to the busy extension.

• Programmable Function Keys
   Function Keys simplify Callback operation.
• **Operation**

**To place a Callback:**

1. Call unavailable (busy or unanswered) extension.
2. Dial 850 or Press Callback key (PGM 15-07 or SC 851: 35).
3. Hang up.
4. Lift handset when busy extension calls you back.

*If the unavailable extension was unanswered (not busy), the Callback goes through after your co-worker uses their phone for the first time. If you have Callback Automatic Answer, you automatically place a call to the formerly busy extension when you lift the handset. If you don’t have Callback Automatic Answer, you must press the ringing line appearance to place the call.*

**To cancel a Callback:**

1. At system phone, press a SPK key and Dial 870.
   OR
   - At system phone, press Camp-On key (PGM 15-07 or SC 851: 35).
   OR
   - At single line set, lift handset and dial 870.

**To test Callback at your single line phone:**

1. Lift the handset.
2. Dial 899.
3. Hang up.
4. When the phone rings, lift the handset.
   *You hear synthesized Music on Hold.*
5. Hang up.
Caller ID

• **Description**

Caller ID allows a display system phone to show an incoming caller’s telephone number (called the Directory Number or DN) and optional name. The Caller ID information is available as a post-answer or pre-answer display. Normally, the system provides the Caller ID pre-answer display.

With the post-answer display, the user sees the incoming caller’s number/name after they answer the call. With the pre-answer display, the user previews the caller’s number before picking up the ringing line. The pre-answer display is only available if the system has Automatic Handsfree for incoming line/loop keys disabled. Refer to the table on the following for the available Caller ID displays.

**Second Call Display**

While busy on a call, the telephone display can show the identity of an incoming trunk or Intercom call. For incoming trunk calls, the display will show the Caller ID or the trunk’s name if Caller ID is not enabled. For incoming Intercom calls, the display will show the calling extension’s name. You can set up the system to present the second call data automatically or allow the user to select the operation of second calls (with service code 779).

Caller ID supports the telco’s Called Number Identification (CNI) and Called Number Delivery (CND) service, when available. These services provide the Caller ID information (i.e., messages) between the first and second ring burst of an incoming call. There are two types of Caller ID message formats currently available: Single Message Format and Multiple Message Format. With Single Message Format, the telco sends only the caller’s phone number (DN). The DN is either 7 or 10 digits long. In Multiple Message Format, the telco sends the DN and the caller’s name. The DN for this format is also 7 or 10 digits long, and the name provided consists of up to 15 ASCII characters.

Telephone’s display can show up to 12 Caller ID digits.

Once installed and programmed, Caller ID is enabled for all types of trunk calls, including:

- Ring Group calls
- Calls transferred from another extension
- Calls transferred from the VRS
- Direct Inward Lines (DILs)

Caller ID temporarily stores 16 calls (total of abandoned and unanswered). New calls replace old calls when the buffer fills.

**Outputting Caller ID Data**

The system includes the Caller ID data on the SMDR report. The report provides the incoming call’s DN in the DIALLED NUMBER field. The CLASS field shows PIN (just like all other incoming calls).
**Caller ID Type (FSK/DTMF)**
The type of Caller ID received can be set for each analogue trunk with Program 14-02-16. The type of Caller ID sent to each SLT telephone can be set with Program 15-03-11.

**ISDN Calls Display Reason for No Caller ID Information**
With Caller ID enabled, the system will provide information for ISDN calls that do not contain the Caller ID information. If the Caller ID information is restricted, the telephone display will show “PRIVATE”. If the system is not able to provide Caller ID information because telco information is not available, then the display will show “No Caller Info”.

**Temporary Memory**
An unanswered call will the Call History key (PGM 15-07 or SC 851: 08) to flash, indicating a new call has been placed in the temporary memory. If enabled in programming, the telephone’s display will show “CHECK LIST”.

This Caller ID data from the temporary memory can be saved either in Abbreviated Dial bins or in One-Touch keys making them available for placing future calls.

**Caller ID to Abbreviated Dial Name Tagging**
If the received Caller ID number matches a number in the Abbreviated Dial bin the name assigned to the Abbreviated Dial bin will be displayed.

Note that if the received Caller ID includes the callers name then the Abbreviated Dial Name Tagging will not occur; the callers name will be displayed.

**Caller ID to Single Line Telephones**
The XN120 can send the caller ID to an analogue single line telephone (SLT) connected to one of the ST telephone ports. The system will also send the calling party number and name for internal calls to the SLT.

**Conditions**
To have pre-answer Caller ID from the voice mail, the call must be an unscreened transfer.

**Default Setting**
Receiving callers name and number is disabled for analogue trunks (to enable: set Program 14-02-10 for each trunk).

Sending caller ID (name and number) is disabled for SLT telephones (to enable: set Program 15-03-09 for each SLT telephone).

Sending callers name is enabled for SLT telephones (to disable: set Program 15-03-10 for each SLT telephone).

Receiving callers name and number is enabled for ISDN trunks, it cannot be disabled.

**Note:** When caller ID is enabled the ringing pattern is fixed at 2 Sec ON/4 Sec OFF for internal and external calls.

### Programming

**10-02-03: Location Setup – Other Area Access Code**

Enter the Other Area Access Code digits (default: 0) required to place an outgoing call (8 digits maximum: 0-9, *, #). This is the code which will be added to the Caller ID information for incoming trunk calls to allow the call to dial out if allowed in 20-19-03.

**14-01-19: Privacy Mode Toggle Option**

When enabled, post answer CCI display will not show CLI Number or Name on the second row of the LCD. If the Line Key is pressed while the line is set to private mode, CLI will then be displayed.

**14-01-20: Basic Trunk Data Setup - Block Outgoing Caller ID**

Allow (1) or prevent (0) the system from automatically blocking outgoing Caller ID information when a user places a call. If allowed (i.e., block enabled), the system automatically inserts the Caller ID block code (defined in Program 14-01-21) before the user Dialled digits (this requires Program 14-02-10 to be enabled). If prevented (i.e., block disabled), the system out-dials the call just as it was Dialled by the user.

**14-01-21: Caller ID Block Code**

Enter the code, up to 8 digits, that should be used as the Caller ID Block Code. This code is automatically inserted before Dialled digits if Program 14-01-20 is set to ‘1’.

**14-02-06: Receiving Type FSK / DTMF**

**14-02-10: Analogue Trunk Data Setup - Caller ID**

Enable (1) or disable (0) a trunk’s ability to receive Caller ID name/number information. If this option is set to ‘1’, the system will suppress ringing and lamping for trunk calls for the first ring in order to receive the Caller ID information.

**14-02-16: Caller-ID Type for Analogue Trunk**

Set the type of Caller ID received on each analogue trunk, FSK (0) or DTMF (1) (default = FSK).

**15-03-11: Caller-ID Type for External Module**

Set the type of Caller ID sent to each analogue telephone, FSK (0) or DTMF (1) (default = FSK).

**20-06-01: Class of Service for Extensions**

Assign Class of Service (1-15) to extensions.

**20-08-15: Class of Service (Outgoing Call Service) - Block Outgoing Caller ID**

<table>
<thead>
<tr>
<th>Without time and date</th>
<th>With absence reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Trunk name</td>
</tr>
<tr>
<td>2</td>
<td>Name Absence Code</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Without time and date</th>
<th>With absence reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Trunk name</td>
</tr>
<tr>
<td>2</td>
<td>NO CALLER INFO</td>
</tr>
</tbody>
</table>
Allow (1) or prevent (0) a user’s Class of Service from automatically blocking outgoing Caller ID information when a call is placed. If allowed (i.e., block enabled), the system automatically inserts the Caller ID block code (defined in Program 14-01-21) before the user Dialed digits (this requires Program 14-02-10 to be enabled). If prevented (i.e., block disabled), the system outdials the call just as it was Dialed by the user.

20-09-01: Class of Service Options (Incoming Call Service) - Second Call for DID/DISA/DIL

In an extension’s Class of Service, enable (1) or disable (0) forced second call. When enabled the user can not turn off second call indication by Service Code 779+0. When disabled the user can choose to receive/not receive second calls with Service Code 779+1.

20-09-02: Class of Service Options (Incoming Call Service) - Caller ID Display

In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to display incoming Caller ID name/number information.

20-09-04: Class of Service (Incoming Call Service) – Notification for Incoming Call List Existence

When enabled, “Check List” appears on a System Phone’s LCD for any new call received with Caller ID. This indicates that there is new Caller ID information to view in the Caller ID list. When disabled, this LCD indication is not provided, although the new Caller ID information can still be viewed in the Caller ID list.

20-13-06: Class of Service Options (Supplementary Service) Automatic Off-Hook Signal

In order for a display phone to show Caller ID information for a second incoming call, must be enabled (1).

20-19-01: System Options for Caller ID - Caller ID Display Formatting

Determine whether the first 10 digits (0) or last 10 digits (1) should be displayed when Caller ID exceeds 12 digits.

20-19-02: System Options for Caller ID - Caller ID Wait Timer

Determine how long an incoming CO call should wait for Caller ID information from telco before the system connects the call.

20-19-03: System Options for Caller ID - Edit Caller ID

In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to edit the stored Caller ID information. For ISDN incoming calls, the digits assigned in Program 10-02-03 are prefixed to the Caller ID number (default = 0) when Program 20-19-03 is enabled.

80-02-01: DTMF Tone Setup – Duration

80-02-02: DTMF Tone Setup – Pause

With Program 14-01-20 set to 1 and Program 14-02-10 set to 1, if the Caller ID block code is being sent too quickly for the telco to recognize, lengthen the pause and duration time for the DTMFs.

Related Features

- Automatic Route Selection
ARS can block outgoing Caller ID information on a call-by-call basis. To do this, insert the Caller ID block code (e.g., *67) in the ARS Dial Treatments.

• **Station Message Detail Recording**
  Caller ID information outputs on the SMDR report.
**Caller ID Sending**

- **Description**
  
  Caller ID sending allows the XN120 to send the calling party's telephone number (CGPN) for outgoing ISDN calls.

  The CGPN is passed on by the Network provider to the called party.

  Note - You may need to request this service with the ISDN Network provider.

  The CGPN number can be set for each trunk and/or each extension, when both are set the extension will take priority over the trunk CGPN.

- **Conditions**
  
  This service may be restricted by the Network provider.

- **Default Setting**
  
  CLIP sending is enabled.
  
  There are no entries for trunk or extension CLIP.

- **Programming**
  
  10-03-05: CLIP Information Sending - enable/disable for each ISDN BRI circuit

  15-01-04 : CLIP Information Sending - enable/disable for each extension

  20-08-13 : CLIP Information Sending - enable/disable per COS

  22-12-01 : ISDN Trunk CLIP - enter the CGPN to be sent for each ISDN trunk

  20-13-01 : Extension CLIP- enter the CGPN to be sent for each extension
Central Office Calls, Answering

• Description

The system provides flexible routing of incoming CO (trunks) calls to meet the exact site requirements. This lets trunk calls ring and be answered at any combination of system extensions. For additional information on making trunk ring, refer to the Ring Group feature.

Delayed Ringing
Extensions in a Ring Group can have delayed ringing for trunks. If the trunk is not answered at its original destination, it rings the DIL No Answer Ring Group (this ring group applies to DIL or non- DIL trunks). This could help a secretary that covers calls for their boss. If the boss doesn’t answer the call, it rings the secretary’s phone after a programmable interval.

Universal Answer
Universal Answer allows an employee to answer a call by going to any system phone and Dialling a unique Universal Answer code. The employee doesn’t have to know the trunk number or dial any other codes to pick up the ringing trunk. You’ll normally set up Universal Answer along with Universal Night Answer (see “Night Service”. When a Universal Night Answer call rings the External Paging, an employee can answer the call from the first available phone. You might also want to use Universal Answer in a noisy warehouse or machine shop where the volume of normal telephone ringing is not adequate. After hearing the ringing over the Paging, an employee can then easily pick up the call from a shop phone. See “Night Service” for more on Universal Night Answer.

The Automatic Answer of Universal Answer Calls option (Program 20-10-07) determines whether or not the extension has the Auto Answer feature for ringing calls. This option allows a user to simply lift the handset to answer a ringing call; they no longer need to dial the service code.

Display Reason for Transfer
When incoming DID, DDI, DISA, DIL or ISDN calls are transferred to another extension or ring group due to a Call Forward or DND setting, the reason for the transfer can be displayed on the phone receiving the transferred call. The extension user can then recognize why they are receiving the call. This feature requires a display telephone in order to view the message.

Conditions
None

Default Setting
Enabled.

• Programming

10-03-03: PCB Setup - Transmit CODEC Gain Type
10-03-04: PCB Setup - Receive CODEC Gain Type
Customise the transmit and receive levels of the CODEC Gain Types for single line telephones.

10-08-01: Pre-Ringing Setup
Enable (1) or disable (0) pre-ringing for outside calls.

14-01-02: Basic Trunk Data Setup - Transmit CODEC Gain Type

14-01-03: Basic Trunk Data Setup - Receive CODEC Gain Type
Customise the transmit and receive levels of the CODEC Gain Types for each trunk.

14-02-02: Analogue Trunk Data Setup - Ring Detect Type
For each trunk, enable delayed ringing (0) or immediate ringing (1).

14-05-01: Trunk Groups
For Universal Answer, assign trunks to trunk groups (1-25) then go to Program 14-06 below to set up Trunk Group Routing.

14-06-01: Trunk Group Routing
For Universal Answer, set up trunk routes (1-25) and then go to Program 23-03 below to assign the trunk routes to extensions. An extension user can use Universal Answer to answer a call if the ringing trunk is in its assigned route.

14-07-01: Trunk Access Map Setup
Set up the Trunk Access Maps (1-51). This sets the access options for trunks. Ring Group programming overrides Access Map programming.

15-06-01: Trunk Access Map for Extensions
Assign Trunk Access Maps (1-51) to extensions.

15-07-01: Programming Function Keys
To have outside calls ring specific keys, assign trunks to line keys (codes 1-51). You can also program function keys as trunk group or loop keys (*02 or *05). For additional loop key data, in Program 15-13 enter 0 (incoming only), 1 (outgoing only) or 2 (both ways).

20-02-09: System Options for Multi-Line Telephones - Disconnect Supervision
Enable (1) disconnect supervision for the system.

20-06-01: Class of Service for Extensions
For Universal Answer, assign a Class of Service (1-15) that enables Program to an extension.

20-10-07: Class of Service Options (Answer Service) - Automatic Answer of Universal Calls
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to use Auto-Answer to pick up Universal Answer calls. This allows a user to simply pick up the handset instead of Dialling a service code.

20-13-23: Class of Service Options (Supplementary Service) - Display the Reason for Transfer
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to display the Reason for Transfer message.

22-01-02: System Options for Incoming Calls - Incoming Call Ring No Answer Alarm
Enable (1) or disable (0) the Incoming Call RNA Alarm. If enabled, the ring cadence will change for a call that rings longer than the interval set in 22-01-03.

**22-01-03: System Options for Incoming Calls - Ring No Answer Alarm Time**
Set the Ring No Answer Alarm interval (0-64800 seconds). If a trunk rings a system phone-system phone longer than this interval, the system changes the ring cadence.

**22-01-04: System Options for Incoming Calls - DIL No Answer Time**
If an incoming trunk call rings longer than this interval, it reroutes to the Ring Group set in Program 22-08.

**22-03-01: Trunk Ring Tone Range**
Assign Ring Tone Ranges to trunks. Trunks ring extensions according to the Ring Tone Range selected in 22-03-01.

**22-04-01: Incoming Extension Ring Group Assignment**
To have trunks ring extensions, assign extensions to ring groups (1-25). For each extension in the Ring Group, indicate in Program 22-06 if trunks should ring (1) or not ring (0).

**22-05-01: Incoming Trunk Ring Group Assignment**
To have the trunks ring extensions, assign trunks to a Ring Group.

**22-06-01: Normal Incoming Ring Mode**
Indicate whether the trunks in the Ring Group assigned in 22-04 should ring (1) or not ring (0).

**22-08-01: DIL/IRG No Answer Destination**
If an incoming trunk call rings longer than the DIL No Answer Time (Program 22-01-04), it routes to the destination you specify in this option. Determine if the destination should be a Ring Group (1-25) or DSPDB Voice Mail (101)

**23-03-01: Universal Answer/Auto Answer**
For Universal Answer, assign trunk routes (1-25) set in Program 14-06 to extensions. An extension user can use Universal Answer to answer a call if the ringing trunk is in its assigned route.

**Related Features**

- **Central Office Calls, Answering Call Forward/DID/DIL/DisA/Do Not Disturb/ISDN**
  The Reason for Transfer option should be set for each type of trunk which will use the Reason for Transfer message.

- **Directed Call Pickup/Group Call Pickup**
  Using these features, ringing calls can be picked up regardless of access map programming.

- **Direct Inward Line**
  Direct Inward Lines ring an extension directly, without Ring Group or Access Map programming.

- **Line Preference**
  An extension user can answer an outside call just by lifting the handset.

- **Long Conversation Cutoff/Warning Tone for Long Conversation**
Long Conversation Cutoff can disconnect incoming and outgoing CO calls after a set time period. Using the Warning Tone for Long Conversation feature allows users on outgoing calls to hear a warning tone prior to the call disconnecting.

- **Microphone Mute**
  In order to mute the handset transmitter, set up a Microphone Mute Programmable Function Key.

- **Night Service**
  Use Universal Answer to pick up Universal Night Answer calls.

- **Programmable Function Keys**
  Line keys and loop keys simplify answering outside calls.

- **Selectable Text Messaging**
  If the Absent text message has been set by the originating extension, the destination extension will display the assigned text message instead of the Reason for Transfer message.

• **Operation**

  **To answer an incoming trunk call:**
  1. Lift handset.
  2. At system phone, press flashing line key.

    *If you don’t have a line or loop key for a trunk call ringing your phone, it rings an a CALL key. If you have Ringing Line Preference, lifting the handset answers the call. You can dial after answering the call. This allows you, for example, to respond to computer-generated incoming calls.*

    OR

  1. If you know the specific line number, dial 772 + Line number (01-51).

  **To use Universal Answer to answer a call ringing over the Paging system:**
  1. At system phone, press a SPK key.
    OR
    At single line set, lift handset.

    *Depending on system programming, this may answer the call and you can skip Step 2.*

  2. Dial 872.

    *If you hear error tone, your extension’s Class of Service prevents Universal Answer.*
Central Office Calls, Placing

• Description

The system provides flexibility in the way each extension user can place outgoing trunk calls. This lets you customise the call placing options to meet site requirements and each individual’s needs.

A user can place a call by:
- Pressing Line Keys or “Loop Keys”
- Pressing a Trunk Group (i.e., loop) key
- Pressing a Trunk Group Routing (dial 0) key
- Dialling a code for a specific trunk (805 + the trunk number)
- Dialling a code for a Trunk Group (804 + group number)
- Dialling a code for Trunk Group Routing or ARS (0)
- Dialling an Alternate Trunk Route Access Code (which you must define)

Conditions
None

Default Setting
Enabled.

• Programming

10-03-03: PCB Setup - Transmit CODEC Gain Type
Customise the transmit and receive levels of the CODEC Gain Types for single line telephones.

10-03-04: PCB Setup - Receive CODEC Gain Type
Customise the transmit and receive levels of the CODEC Gain Types for single line telephones.

11-01-01: System Numbering
Set up a Service Code for Alternate Trunk Route Access.

11-09-01: Trunk Access Code
If required, change the single-digit Trunk Access Code (normally 0). If you change this code, you must also review the settings in 11-01 for the new code selected.

11-09-02: Trunk Access Code - Alternate Trunk Route Access Code
Assign the Service Code set up in 11-01 for Alternate Trunk Route Access.

11-12-01: Service Code Setup (for Service Access)
To simplify placing calls, assign function keys for placing trunk calls: Trunk Group Routing/dial 0 keys (code 804).

14-01-01: Basic Trunk Data Setup - Trunk Name
To make identifying calls easier, assign a name to each trunk.

14-01-02: Basic Trunk Data Setup - Transmit CODEC Gain Type

14-01-03: Basic Trunk Data Setup - Receive CODEC Gain Type
Assign a CODEC Gain Type to each trunk. This sets the amount of gain (amplification) for the selected trunk.

14-01-07: Basic Trunk Data Setup - Outgoing Calls
For each trunk, allow (1) or prevent (0) outgoing calls.

14-01-10: Basic Trunk Data Setup - DTMF Tones for Outgoing Calls
For each trunk, enable (1) or disable (0) DTMF tones for outgoing trunk calls.

14-07-01: Trunk Access Map Setup
Set up the Trunk Access Maps (1-51). This sets the access options for trunks.

15-06-01: Trunk Access Map for Extensions
Assign Trunk Access Maps (1-51) to extensions.

15-07-01: Programming Function Keys
To simplify placing calls, assign function keys for placing trunk calls: Line keys (1-51) and Trunk Group/loop keys (code *02 + group).

20-02-06: System Options for Multi-Line Telephones – Pre-selection Time
Set the preselection interval (0-64800 seconds). When a system phone user preselects a line key, the system remembers the preselection for this interval.

20-02-09: System Options for Multi-Line Telephones - Disconnect Supervision
Enable (1) disconnect supervision for the system.

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to extensions.

20-08-02: Class of Service Options (Outgoing Call Service) - Trunk Calls
In an extension’s Class of Service, enable (1) or disable (0) trunk calling.

21-15-01: Alternate Trunk Route for Extensions
Designate the trunk route accessed when a user dials the Alternate Trunk Route Access Code. Refer to “Trunk Group Routing” to set up outbound routing.

81-01-01: Analogue Trunk Data Setup
Review the Analogue Trunk Timers for compatibility with the connected telco.

- Related Features
  - Alphanumeric Display/Call Timer
    If the trunk name seize display is enabled in programming (Program 20-09-04=1), Call Timer starts automatically after the user places a trunk call. Disabling the trunk name seize display (Program 20-09-04=0) also disables the Call Timer.
  - Automatic Route Selection
    The system can automatically select the correct type of line to use based on the number dialled and the time.
  - Handsfree
With Automatic Handsfree, an extension user can press a line key to place a trunk call without first lifting the handset or pressing SPK. Users without Automatic Handsfree can preselect a line key before lifting the handset or pressing SPK.

- **Long Conversation Cutoff/Warning Tone for Long Conversation**
  Long Conversation Cutoff can disconnect incoming and outgoing CO calls after a set time period. Using the Warning Tone for Long Conversation feature allows users on outgoing calls to hear a warning tone prior to the call disconnecting.

- **Loop Keys**
  Loop keys simplify placing Central Office Calls.

- **Microphone Mute**
  In order to mute the handset transmitter, set up a Microphone Mute Programmable Function Key. The MIC key will only mute the Handsfree microphone.

- **Programmable Function Keys**
  Line keys and loop keys simplify placing outside calls.

- **Trunk Group Routing**
  Trunk Group Routing sets outbound call routing options for users that dial the Trunk Group Routing code (0) for trunk calls.

- **Trunk Groups**
  Use trunk group programming to set the order in which users access trunks within a specific trunk group.

**Operation**

**To place a call over a trunk group:**

1. At system phone, press a SPK key.
   OR
   At single line set, lift handset.

2. Dial 804.

3. Dial line group number (01-25).

4. Dial number.
   OR
   1. At system phone, press trunk group key (PGM 15-07 or SC 851: "02 + group).
      
      *Also see the “Loop Keys” feature.*

2. Dial number.

**To place a call using Trunk Group Routing:**

1. 1. At system phone, press a SPK key.
    OR
    At single line set, lift handset.

2. Dial 0.
   
   *If your system has an Alternate Trunk Route Access code, you may dial that instead.*

3. Dial number.
   OR
   1. At system phone, press Trunk Group Routing key (PGM 15-07 or SC 852: "05).
      
      *Also see the “Loop Keys” feature.*

2. Dial number.
To place a call over a specific trunk:

1. At system phone, press a SPK key.
   OR
   At single line set, lift handset.

2. Dial 805.

3. Dial line number (e.g., 05 for line 5).

4. Dial number.
   OR

1. At system phone, press line key (PGM 15-07 or SC 852: 01 to 51).

   Also see the "Loop Keys" feature.

2. Dial number.
Class of Service

• Description

Class of Service (COS) sets various features and Dialling options (called items) for extensions. The system allows any number of extensions to share the same Class of Service. An extension can have a different Class of Service for each of the Night Service modes. This lets you program a different set of Dialling options for daytime operation, night time operation and even during lunch breaks. An extension’s Class of Service can be changed in system programming or via a Service Code (normally 777).

Conditions

None

Default Setting

• The attendant (port 01/extension 200 and port 02/extension 201) have Class of Service 1 in all Night Service modes. All other extensions have Class of Service 2 in all Night Service modes.

• See the Charts for the default settings of the individual options.

If changing Class of Service via Service Code:

• The password required to change Class of Service via Service Code 777 is 0000 (Program 90-02-02 = 0000).

• An extension can use Service Code 777 to change another extension’s Class of Service (Program 20-13-28 = 1).

• An extension automatically blocks another extension’s attempt to change their Class of Service via Service Code 777 (Program 20-13-28 = 0).

• The default Service Code for this option is 777 (Program 11-11-24 = 777).

• Programming

11-11-24: Service Code Setup (for Setup/Entry Operation) - Change Extension Class of Service

If required, use this option to change the Service Code a user dials to change an extension’s Class of Service.

20-06-01: Class of Service for Extensions

Assign a Class Of Service to extensions (1-15). Any Class of Service assignments you change using Service Code 777 (see below) automatically update this program.

20-07 through 20-14 : Class of Service Options

Set the options in a Class of Service.
If changing Class of Service via Service Code:

**20-13-28: Class of Service Options (Supplementary Service) - Allow Station COS to be Changed**

Use this option to permit (1) or block (0) another extension from changing this extension's Class of Service via Service Code 777.

• Related Features

• Night Service
   An extension can have a different Class of Service for each Night Service mode: Day 1, Night 1, Midnight 1, Rest 1, Day 2, Night 2, Midnight 2, or Rest 2.

• Operation
   To change an extension’s Class of Service (via Service Code 777):
   1. Press a SPK key.
   2. Dial 777.
   3. Dial the extension number you want to change.
      You see: MODE1:nn
      Press HOLD to leave the current value unchanged. The extension you dial may be set to block your attempt to change their Class of Service.
   4. Enter the Day 1 Mode Class of Service for the extension you selected in step 3 and press HOLD.
      You see: MODE2:nn
      Press HOLD to leave the current value unchanged.
   5. Enter the Night 1 Mode Class of Service for the extension you selected in step 3 and press HOLD.
      You see: MODE3:nn
      Press HOLD to leave the current value unchanged.
   6. Enter the Midnight 1 Mode Class of Service for the extension you selected in step 3 and press HOLD.
      You see: MODE4:nn
      Press HOLD to leave the current value unchanged.
7. Enter the Rest 1 Mode Class of Service for the extension you selected in step 3 and press HOLD.
   
   You see: MODE5:nn
   Press HOLD to leave the current value unchanged.

8. Enter the Day 2 Mode Class of Service for the extension you selected in step 3 and press HOLD.
   
   You see: MODE6:nn
   Press HOLD to leave the current value unchanged.

9. Enter the Night 2 Mode Class of Service for the extension you selected in step 3 and press HOLD.
   
   You see: MODE7:nn
   Press HOLD to leave the current value unchanged.

10. Enter the Midnight 2 Mode Class of Service for the extension you selected in step 3 and press HOLD.
   
   You see: MODE8:nn
   Press HOLD to leave the current value unchanged.

11. Enter the Rest 2 Mode Class of Service for the extension you selected in step 3 and press HOLD.
   
   You see: Enter Sta#-

12. Go to step 3 and enter another extension number.
    OR
    Press SPK to hang up.
Conference

• Description

The conference feature lets an extension user add additional inside and outside callers to their conversation. With Conference, a user may set up a multiple-party telephone meeting without leaving the office. The system provides 32 Conference circuits, and allows up to 8 internal or external parties to be conferenced. This means that one extension can Conference up to 7 internal and/or external parties together (the originator would be the 8th party).

Split (From Conference)
Split allows a user to alternate (i.e., switch) between their callers in Conference. This will allow a dispatcher, for example, to control a telephone meeting between themselves, a customer and a service technician. The dispatcher can meet together with all parties, privately set up a service strategy with the technician and then meet again to set the schedule.

Split cycles through the Conference in the same order in which the Conference was initially set up. If a user places an outside call, conferences extension 202 followed by extension 203, Split will cycle from the trunk, to 202 and finally to 203. The Split cycle then repeats.

Barge Into Conference
If a user’s extension has Barge In capability enabled, they can also Barge In on an established Conference. This permits, for example, an attendant or supervisor to join a Conference in an emergency. It also allows a co-worker to leave a conference -- and then rejoin the telephone meeting when it is convenient to do so.

Transfer Call Into Conference
An extension with Barge In capability can Transfer a call into an existing Conference. This would allow, for example, an attendant to locate co-workers and then Transfer them into an existing telephone meeting. There is no need for the attendant to locate all the parties at the same time and sequentially add them into the Conference.

Conditions
A. Up to four eight-party conferences may be established simultaneously.
B. Conference circuits may be used by other facilities, such as barge in, conversation recording and tandem trunking.

Default Setting
Enabled.

• Programming

11-12-08: Service Code Setup (for Service Access) - Barge In
If required, use this program to change the code users dial to Barge In to a Conference call. This code is normally 810.

11-12-47: Service Code Setup (for Service Access) - Call Waiting Answer / Split Answer for SLT
If required, use this program to change the code users dial to Split while on a Conference call. This code is normally 894.

11-16-02: Program 11-16 : One-Digit Service Code Setup - Barge In
If required, use this program to define the single digit service code users dial to Barge In to a Conference call.

**14-01-04: Basic Trunk Data Setup - Transmit Gain Level for Conference and Transfer Calls**
CODEC gain set at 0 dB (14-01-04 = 32 [CODEC Gain Type 2]) can be used to set the CODEC gain type for multi-line Conference calls.

**15-07-01: Programming Function Keys**
Assign a function key for Conference (code 07).

**20-06-01: Class of Service for Extensions**
Assign a Class Of Service (1-15) to an extension.

**20-13-08: Class of Service Options (Supplementary Service) – Conference**
In an extension’s COS, enable (1) or disable (0) the extension’s ability to initiate a Conference.

**20-13-15: Class of Service Options (Supplementary Service) - Barge In Initiate**
In an extension’s COS, enable (1) or disable (0) the extension’s ability to Barge In to a call.

**20-13-16: Class of Service Options (Supplementary Service) - Barge In Receive**
In an extension’s COS, enable (1) or disable (0) the extension’s ability to receive a Barge In on a call.

**20-14-11: Class of Service Options For DISA - DISA Trunk Barge In**
Determine if DISA users should have the ability to dial a service code to Barge In to a Conference call (0=disabled, 1=enabled).

**Related Features**
- **Central Office Calls, Placing**
  Define the outgoing call options for each trunk and user.
- **Conference, Voice Call**
  Set up a Conference with a co-worker in your immediate work area.
- **Direct Inward System Access (DISA)**
  DISA users may use the Barge In feature on a Conference call if they know the service code and are permitted in their DISA Class of Service.
- **Meet Me Conference**
  Meet Me Conference lets an extension user set up a Conference via Paging.
- **Meet Me Paging**
  Meet Me Paging lets an extension user set up a two-party meeting via Paging.
- **Programmable Function Keys**
  In order for system phone to have Conference, it must have a Conference function key.
- **Tandem Trunking**
  A user can set up an Unsupervised Trunk-to-Trunk Conference and then drop out of the call, allowing the remaining parties to continue the conversation.
• Operation

To establish a Conference:

System Phone

1. Establish Intercom or trunk call.
2. Press CONF or Conference key (PGM 15-07 or SC 851: 07).
3. Dial extension you want to add.
   OR
   Access outside call
   OR
   Retrieve call from Park orbit.
   To get the outside call, you can either press a line key or dial a trunk/trunk group code. You can optionally go back to step 2 to add more parties to your Conference.
4. When called party answers, press CONF or Conference key twice.
   If you cannot add additional parties to your Conference, you have exceeded the system’s Conference limit.
5. Repeat steps 2-4 to add more parties.

Single Line Set

1. Establish Intercom or trunk call.
2. Hookflash and dial 826.
3. Dial extension you want to add.
   OR
   Access trunk call.
   OR
   Retrieve call from Park orbit.
   Hookflash and repeat step 3 to add more parties.
   OR
   Hookflash twice to set up the Conference.
   If you cannot add additional parties to your Conference, you have exceeded the system’s Conference limit.

To exit a Conference without affecting the other parties:

System Phone

1. Hang up.
   If you press Hold while on a call with two outside callers, the outside callers hear Music on Hold.

Single Line Set

1. Hang up.
   If you are not permitted to use Tandem Trunking, outside callers may hear Music on Hold.

To Barge In to Conference Call:

1. Pick up the handset or press SPK and dial the service code (810=default).
   If the telephone doesn’t have the proper COS, a warning tone is sent. After the user hangs up, the system will automatically place a Callback to the extension.
2. Dial the extension number or press a DSS key of a telephone within a Conference call.
   When a new call is added to the conference, an intrusion tone is heard by all parties in the Conference, depending on system programming, and all display system phones show the joined party. If a Conference is not possible:
   - the extension user will hear a warning tone
   - the DISA user will be rerouted to the defined ring group
   OR

Not available for DISA trunks:
1. Dial the extension number of the internal party.

2. Dial the single digit service code.

   Instead of the single digit service code, the service code 810 can also be Dialled at this point.

To join a Conference Call via Privacy Release:

   A. When invited to join Conference call, press the indicated Line Key.
Conference, Voice Call/Privacy Release

• Description

Voice Call Conference lets extension user’s in the same work area join in a trunk
Conference. To initiate a Voice Call Conference, an extension user just presses the
Voice Call Conference key and tells their co-workers to join the call. The system
releases the privacy on the trunk, and other users can just press the trunk’s line key to
join the call.

Voice Call Conference does not use the telephone system features to announce the
call. The person initiating the Voice Call Conference just announces it “through the air.”

Privacy Mode Toggle Option

The Privacy Mode Toggle option allows an extension user to quickly change an outside
call from the non-private mode to the private mode. This would help a workgroup
supervisor, for example, that needed to quickly monitor any group member’s call. If the
supervisor wanted to make a “secure” call, however, they could quickly switch the line’s
mode and be assured that their call would not be monitored. If the outside call is on a
line key, the user just presses the line key to switch modes. If the call is on a loop key,
the user presses their Privacy Release function key instead.

For systems using the Privacy Mode Toggle option, trunks initially have the privacy
released. If privacy is desired for a trunk, use the toggle option or press the Privacy
Release function key to switch modes.

Conditions

none

Default Setting

Disabled.

• Programming

14-01-19: Basic Trunk Data Setup - Privacy Mode Toggle Option

Determine if a trunk should be able to be toggled to a private/non-private
line (0=disabled, 1=enabled).

15-07-01: Programming Function Keys

Assign a function key for Voice Call Conference (code 32).

20-06-01: Class of Service for Extensions

Assign a Class Of Service (1-15) to an extension.

20-13-09: Class of Service Options (Supplementary Service), Privacy Release

In an extension’s COS, enable (1) or disable (0) an extension’s ability to
use Privacy Release allowing for a Voice Call Conference. The trunk
must be programmed to allow this feature in Program 14-01-19.

31-01-04: System Options for Internal/External Paging - Privacy Release

Time

Set the interval users have to join a Voice Call Conference after it is
announced. (Note that this interval is also used for Meet Me Confer-
ence.)
• Related Features
  
  • Conference
  Set up a multiple-party telephone meeting without leaving the office.

  • Programmable Function Keys
  Voice Call Conference requires a Voice Call Conference function key and line keys.

  • Single Line Telephones
  This feature is not available at single line telephones.

• Operation

To join a Voice Call Conference (if invited):
1. After Conference request, press indicated line key.

To exit a Voice Call Conference without affecting the other parties:
1. Press SPK to hang up.

To make your trunk call Private (Privacy Mode Toggle Option Enabled):
2. Press the Line Key.
   – OR –
   Press the Privacy Release key (PGM 15-07 or SC851: 32) if call is on a loop key.
Continued Dialling

• Description

Continued Dialling allows an extension user to dial a call, wait for the called party to answer and then dial additional digits. This helps users that need services like Voice Mail, automatic banking and Other Common Carriers (OCCs).

There are two types of Continued Dialling:

• Continued Dialling for Intercom Calls
  Depending on an extension’s Class of Service, a system phone user may be able to dial additional digits after their Intercom call connects. In systems with Voice Mail, for example, Continued Dialling lets extension users dial the different options after the Voice Mail answers. Without Continued Dialling, extension users cannot access these Voice Mail options.

• Continued Dialling for Trunk Calls
  Continued Dialling gives a user access to outside services like automatic banking, an outside Automated Attendant, bulletin boards and Other Common Carriers (OCCs). After the outside service answers, the user can dial digits for whatever options the services allow. Without Continued Dialling, the system’s Toll Restriction will cut off the call after a specific number of Dialled digits. See Programming below for additional information.

NOTICE
Continued Dialling may make the system more susceptible to toll fraud.

Conditions
None

Default Setting
Enabled.

• Programming

20-06-01: Class of Service for Extensions
  Assign a Class Of Service (1-15) to an extension.

20-13-13: Class of Service Options (Supplementary Service) - Continued Dialling
  In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to use Continued Dialling for Intercom calls to 2500 type devices.

21-04-01: Toll Restriction Class
  Assign a Toll Restriction Class (1-15) to an extension.

21-05-04: Toll Restriction Class - Maximum Number of Digits Table Assignment
  Assign Program 21-06-03 entries to each Toll Restriction class.
• Related Features
  • Toll Restriction
    The ability to use Continued dialling on trunk calls is set by Toll Restriction programming.

• Operation
  To use Continued Dialling:
  1. Place Intercom or trunk call.
  2. Continue Dialling after call connects.

  Toll Restriction and Class of Service programming may limit Continued Dialling.
Cost Centre Codes

• Description

Certain Network providers can accept a Cost Centre Code (CCC) that will be used to provide an itemised bill from their Network provider. The CCC is inserted automatically by the XN120 before the dialled digits and is stripped off by the Network provider. There are two methods that the XN120 can send CCC to the Network:
Send the CCC to the direct carrier.
OR
Send the CCC within the Least Cost Routing (LCR) access codes. You can then get extension billing from the indirect carrier.

Conditions

You must confirm the quantity of CCC digits required by the Network provider otherwise calls will not route correctly.

Confirm with the Network provider that Cost Centre Codes are supported if you also have Carrier Pre-Select (CPS) operation.

Default Setting

Disabled.

• Programming

14-01-23 : LCR Mode - Select type 2: LCR ON(Cost Centre Code only).
26-07-01 : Cost Centre Codes - Set the CCC for each extension.

• Related Features

• LCR - Least Cost Routing
  Cost Centre Codes can be combined with the LCR operation.

• Operation

The operation is automatic and cannot be bypassed.
Department Calling

• **Description**

With Department Calling, an extension user can call an idle extension within a pre-programmed Department Group by dialling the group's pilot number. The call would ring the first available extension in the group. For example, this would let a caller dial the Sales department just by knowing the Sales department's pilot number. The caller would not have to know any of the Sales department's extension numbers. The system allows up to 32 Department Calling Groups.

**Department Group Name**

When an internal extension is queued at a busy department group the name will be displayed at the system phone's display. The user will see: WAITING (group name). The group name is set by Program 16-01-01.

**Department Group Routing**

There are two types of routing available with Department Calling: Priority Routing and Circular Routing.

With Priority Routing, an incoming call routes to the highest priority extensions first. Lower priority extensions ring only if all higher priority extensions are busy. Priority routing is selected by Program 16-01-02.

With Circular Routing, each call rings a new extension, providing an easy type of Uniform Call Distribution (UCD).

For example, in a Department Group set for circular routing with extensions 210 (Priority 1), 211 (Priority 2) and 212 (Priority 3).

• The first call rings 210.
• The second call rings 211.
• The third call rings 212.
• The fourth call rings 210 and the cycle repeats.

**Note:** When programming, the high priority extensions have low priority numbers. For example, priority 1 has a higher priority than priority 10.

**Overflow Routing**

Department Calling also provides overflow routing for extensions within the group. If a user directly dials a busy extension within a Department Group, the system can optionally route the call to the first available group member. Overflow routing is set by Program 16-01-03.

**Hunting Mode**

Ringing calls can step around members of the group once only and stop at the last member or repeatedly search for a free member. Hunting mode is set by Program 16-01-04.

**Simultaneous Ringing**

All idle members of the department group can ring simultaneously for internal and outside calls to the pilot number. Calls do not cycle between group members.

Simultaneous ringing can be automatic (all members ring when the call is placed to the pilot number) or manual (the call to the pilot number will step around each member of
the group until the caller selects simultaneous ring mode). The automatic/manual option is selected by Program 16-01-05. To select manual mode the user must either dial the service code 780 (set by Program 11-12-09) or the single digit service code set by Program 11-16-10.

Note, when automatic is selected the operation of Program 16-01-10 is effected. Calls to the pilot number will not receive ringback tone if all members are busy, they will receive busy tone and will not wait for a member to become free.

Recall Restriction
Calls transferred to the pilot number that do not get answered will recall at the extension that transferred the call. The transfer recall can be restricted (turned off) by Program 16-01-07. When the transfer recall is restricted the transferred call will ring the group until it is answered or the caller clears down.

Maximum Queuing Limit
The quantity of ISDN DDI trunk calls queuing at a busy Department Group can be limited when all members of the group are busy. When the queue limit is reached further calls will receive busy indication. The number of calls in the queue can be set by Program 16-01-08.

If the queue limit is set to 0 then no ISDN DDI calls will be queued.

Note that the queue limit will be ignored if enhanced hunting is set in Program 16-01-10 or you have enabled Busy step on for the DDI in Program 22-11-04.

No Answer Step On Time
An un-answered call ringing at a member of a department group will step on to the next available member after a preset time, set by Program 16-01-09. If the timer is set to 0 the step on will be disabled.

Enhanced Hunting
Department Calling is enhanced with expanded hunting capabilities. Hunting sets the conditions under which calls to a Department Group pilot number will cycle through the members of the group. The hunting choices are:

- Normal Hunting (Program 16-01-10 = 0)
  A call to the pilot number will hunt past a busy group member to the first available extension. The call will continue to ring the extension until it is answered or the calling party hangs up, it will also step on to the next available member after the No Answer Step On Time, timer 16-01-09. Calls to the group when all members are busy will receive busy tone.

- Busy (Program 16-01-10 = 1)
  A call to the pilot number will ring the first idle member of a Department group, following the priority or circular routing. The call will continue to ring the extension until it is answered or the calling party hangs up, it will not step on to the next available member. If the Department Group has Priority Routing enabled, and the highest priority member is busy, the call will step on to the next available member. Calls to the group when all members are busy will receive ring back tone and wait for a member to become free.

- No Answer (Program 16-01-10 = 2)
  A call to the pilot number will ring the first idle member of a Department group, following the priority or circular routing. The call will continue to ring the extension until it is answered or the calling party hangs up, it will also
step on to the next available member after the No Answer Step On Time, timer 16-01-09. If the Department Group has Priority Routing enabled, and the highest priority member is busy, the call will wait for the extension to become free and will not step on to the next available member. Calls to the group when all members are busy will receive ring back tone and wait for a member to become free.

- **Busy & No Answer (Program 16-01-10 = 3)**

A call to the pilot number will ring the first idle member of a Department group, following the priority or circular routing. The call will continue to ring the extension until it is answered or the calling party hangs up, it will also step on to the next available member after the No Answer Step On Time, timer 16-01-09. If the Department Group has Priority Routing enabled, and the highest priority member is busy, the call will step on to the next available member and continue to step on after the No Answer Step On Time. Calls to the group when all members are busy will receive ring back tone and wait for a member to become free.

Note that enhanced hunting will effect the operation of simultaneous ringing and maximum queue limit.

**Queue Announcements**

If a call in queue is an outside call, and the system has DSPDB daughter board installed for VRS, the queued caller can hear a customer recorded announcement. Up to two different announcements can be given to the queued caller.

There is also a pre-recorded announcement, "Please hold on. All lines are busy. Your call will be answered when a line becomes free."

The queue announcements are assigned by Program 22-15 for each group.

Note, DDI calls will not receive the queue announcement if the queue limit is set to 0 in Program 16-01-08, enhanced hunting is set to normal hunting in Program 16-01-10 and the DDI has no transfer set in Program 22-11-05 as calls will not queue at the busy group. You must set either a queue limit greater than 0 or set enhanced hunting to allow calls to queue at a busy group or set a transfer option in 22-11-05.

**User Log In/Log Out**

An extension user can log out and log in to a Department Calling Group. By logging out, the user removes their extension from the group. Once logged out, Department Calling bypasses their extension. When they log back in, Department Calling routes to their extension normally. All users can dial a code to log in or log out of their Department Calling Group. A system phone can optionally have a function key programmed for one-button log in and log out operation.

**Secondary Group Allocation**

An extension can be a member of one Department Group by allocation in Program 16-02-01. An extension can also be a secondary member of other Department Groups by allocation in Program 16-03-01. Each Department Group can have up to 16 secondary members.

When a Department Group contains a secondary member allocated in Program 16-03-01 then the simultaneous ring option (automatic and manual) is not available.
Conditions
When a DIL rings to a Department Group, the DIL will not follow overflow programming (Programs 22-01-04 and 22-08).
If an extension sets call forward it will be removed from any department groups.
Department group calls cannot follow the call forward.
If an extension sets DND External it will not receive any outside calls to the department group.
If an extension sets DND Internal it will not receive any internal calls to the department group.
If an extension sets DND All it will not receive any outside or internal calls to the department group.

Default Setting
Disabled.

• Programming

11-07-01: Department Group Pilot Numbers
Assign pilot numbers to the Extension (Department) Groups you set up in Program 16-02.

15-07-01: Programming Function Keys
Assign a Department Calling key so extension users can install or remove themselves from the Department Calling Group.

16-01-01: Department Group Basic Data Setup - Department Name
Assign a name to the Extension (Department) Groups you set up in Program 16-02.

16-01-02: Department Group Basic Data Setup - Department Calling Cycle
Set the routing cycle for calls into a department (i.e., when a user dials the department pilot number). The system can ring the highest priority extension available (Priority Routing, 0) or cycle in circular order through the group (Circular Routing, 1).

16-01-03: Department Group Basic Data Setup - Department Routing When Busy
Set how the system routes an Intercom call to a busy Department Group member. The caller can hear busy tone (0) or overflow to the first available Department Group member (1). This option is for Intercom calls to an extension, not a pilot number.

16-01-09: Department Group Basic Data Setup - Department Hunting No Answer Time
Set the duration a Department Group call will ring at an extension before it steps on to the next available member.

16-01-10: Department Group Basic Data Setup - Hunt Type
Set the operation of department group calls.
1 No Hunting: Calls step around the group. Calls to a busy group receive busy tone.
2 Busy Hunting: Calls do not step around the group. Calls will step to the next member if the priority extension is busy. Calls to a busy group receive ring back tone.
3 No Answer Hunting: Calls step around the group. Calls will not step on if the priority extension is busy. Calls to a busy group receive ring back tone.

4 Busy/No Answer Hunting: Calls step around the group. Calls will step on if the priority extension is busy. Calls to a busy group receive ring back tone.

16-02-01: Department Group Assignment for Extensions
Assign extensions to Department Groups (1-32) and set the priority assignment.

16-03-01: Secondary Department Group
You may assign extensions to a second Department Group.

20-06-01: Class of Service for Extensions
Assign extension to more than one department group. Each group can have up to 16 secondary members. Adding a secondary member will disable simultaneous ring mode for the group.

20-13-14: Class of Service Options (Supplementary Service) - Department Calling
In an extension’s Class of Service, allow (1) or prevent (0) Department Calling.

22-02-01: Incoming Call Trunk Setup
If you want a trunk to be a DIL to a Department Group, assign Service Type 4 for each Night Service Mode. Also see 22-07 below.

22-07-01: DIL Assignment
For each trunk assigned Service Type 4 in 22-02 above, assign the DIL destination as the Department Group pilot number (385-416 for Department Groups 1-32).

• Related Features
  • Department Step Calling
    Easily step call to an idle Department Group member if the member called is busy.
  • Multiple Directory Numbers / Call Coverage
    A virtual extension can be programmed allowing a Call Coverage key to receive multiple calls which can camp on to the extension - no analogue port is required.
  • Transfer
    An extension user can Transfer a call to a Department Group master number. If unanswered, the call will recall the transferring extension after the Transfer Recall Time (Program 24-02-04).
  • Voice Mail Integration
    Voice Mail Integration uses one Department Group for voice mail.

• Operation
  To call a department:
  1. At system phone, press a SPK key.
     OR
     At single line set, lift handset.
  2. Dial department's extension number.
The system routes the call to the first free phone in the department.

To log out of your Department Calling Group:
While you are logged out, Department Calling cannot route calls to your extension.

1. Press a SPK key.
2. Dial 750 + 1.
   OR
1. Press Department Calling Log In key (PGM 15-07 or SC 851: 46).
   The key lights while you are logged out.

To log back in to your Department Calling Group:
While you log back in, Department Calling will route calls to your extension.

1. Press a SPK key.
2. Dial 750 + 0.
   OR
1. Press Department Calling Log In key (PGM 15-07 or SC 851: 46).
   The key goes out when you log back in.
Department Group - Call Forward

•Description

Department Group Call Forward allows a user to set call forward for calls routed to a department group.

The forward can be set for each department group and each department group can have its own destination number that the calls are forwarded to. The destination can be either an internal extension/ pilot number or an off premise number.

The feature will operate for calls via ISDN trunk ports that are set as DDI (Type 3 in Program 22-02-01) and internal calls to the pilot number.

The call forward is controlled by service codes and function keys. The destination can also be changed by the user for each night mode (1-8).

When call forward is set all incoming calls to the department group will be forwarded immediately or after a delay. Call forward after a delay can only be set via function key 59 and will only operate for incoming DDI calls to the department group. The delay time is set by Program 24-02-08.

The destination of the call forward is saved in an Abbreviated Dial bin, the bin is defined by Program 24-05-01. If a different call forward destination is required for each night mode then a different Abbreviated Dial bin must be defined for each night mode. To route the call off premise you must enter a trunk access digit (e.g. 9) before the destination number. If there is no trunk access digit the call will route internally. The internal number can be an extension or another department group pilot number.

It is also possible to chain the call forwards, for example if department group 01 is forwarded to department group 02 and group 02 is also forwarded extension 250 then calls to department group 01 will ring at extension 250.

A call that is forwarded off premise will be disconnected after timers 25-07-07 & 08.

The outgoing trunk route is defined by Program 21-03-01. A free trunk within this route will be used when a call is forwarded off premise.

Conditions

Analogue trunks must have disconnect clear enabled when call forward off premise is set, this is to ensure the lines are cleared when a call is disconnected.

The call forward destination cannot be set from an analogue SLT via Service Code 704.

Default Setting

The service code to enable department group forwarding is 702.

The service code to disable department group forwarding is 703.

The service code to set/change the destination number is 704.
Abbreviated Dial bin 1999 is used as the call forward destination for all night modes.

The disconnect timers are set to give a warning tone after 30 seconds and then disconnect after another 15 seconds.

The outgoing trunk route is not defined.

Disconnect clear is not set.

Trunk to trunk call forward setting is enabled in Class of Service.

**Programming**

11-11-25 : Service Code - 702  
11-11-26 : Service Code - 703  
11-10-08 : Service Code - 704  
13-04-01 : Abbreviated Dial Name and Number  
14-01-13 : Trunk to Trunk Transfer  
15-07-01 : Programming Function Keys (Codes 58 and 59)  
20-11-07 : Class of Service  
21-03-01 : Trunk Route for Automatic Trunk to Trunk Routing  
24-04-01 : Destination Abbreviated Dial Bin Number (bin 1999 is used at default)  
25-07-07 & 08 : DISA Conversation Timers

**Related Features**

- Department Calling  
- Trunk to Trunk Transfer  
- Call Forward Off Premise  
- Call Forward to Abbreviated Dial Bin  
- Programmable Function Keys

**Operation**

To set the destination number for each department group.

(Cannot be set from an analogue SLT.)

1. Press SPK to go off hook.
2. Dial 704.
3. Dial the department group number (01 to 64).
4. Dial the night mode number (1 to 8).
5. Dial the off premise destination number (include any trunk access digits for off premise).
6. Press HOLD to set the destination for other night modes.
7. Press SPK to hang up.
Note that at step 5 the destination number will be saved to the Abbreviated Dial bin number specified by Program 24-05-01 for the chosen night mode.

If the same Abbreviated Dial bin is also used for other night modes then you do not need to set them separately. For example at default bin number 1999 is used for all night modes so when a night mode destination number is set for any night mode it will be used for all night modes.

**To set the call forward for incoming calls to a department group:***
1. Press SPK to go off hook.
2. Dial department group call forward service code - 702.
3. Dial the department group number (01 to 64).
4. Press SPK to hang up.
5. Repeat steps 1 to 4 for further department groups.

**Or**

6. Press the department group call forward function key (851+58+group number). The key will flash red when the call forward is set.

**To cancel the call forward for incoming calls to a department group:**
1. Press SPK to go off hook.
2. Dial department group call forward cancel service code - 703.
3. Dial the department number (01 to 64).
4. Press SPK to hang up.
5. Repeat steps 1 to 4 for further department groups.

**Or**

6. Press the department group call forward function key (851+58+group number). The key will go out when the call forward is cancelled.

**To set delayed call forward for incoming DDI Calls:**
1. Press the department group delayed call forward function key (851+59+group number). The key will flash red when the call forward is set.
2. Incoming DDI calls will ring at the department group until a timer expires (Program 24-02-08).
3. When the timer expires the call to the department group will forward to the destination number.

**To cancel delayed call forward for incoming DDI Calls:**
1. Press the flashing department group delayed call forward function key (851+59+group number). The key will go off when the call forward is cancelled.
Department Step Calling

• Description

After calling a busy Department Calling Group member, an extension user can have Department Step Calling quickly call another member in the group. The caller does not have to hang up and place another Intercom call if the first extension called is unavailable. Department Step Calling also allows an extension user to cycle through the members of a Department Group.

Conditions

None

Default Setting

Enabled.

• Programming

11-16-01: Single Digit Service Code Setup

If required, use this option to change the Department Step Calling Single Digit Service Code.

15-07-01: Programming Function Keys

Assign a function key Department Step Calling (code 36).

20-06-01: Class of Service for Extensions

Assign a Class Of Service (1-15) to an extension.

20-08-12: Class of Service Options (Outgoing Call Service) - Department Step Calling

In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to use Department Step Calling.

• Related Features

• Department Calling

An extension user can call an idle extension within a pre-programmed Department Group by dialling the group’s pilot number. Department Calling also provides overflow routing for extensions within the group - which simulates Step Calling.

• Programmable Function Keys

Function keys simplify Department Step Calling operation.

• Operation

To make a Step Call:

You step through Extension Groups set in Program 16-02.

1. Place call to busy Department Group member.
   OR
   Place call to Department Group pilot number.

2. Press Step Call key (PGM 15-07 or SC 851: 36).

3. Repeat step 2 to call other Department Group members.
Dial Number Preview

• Description

Dialling Number Preview lets a display system phone user dial and review a number before the system dials it out. Dialling Number Preview helps the user avoid Dialling errors.

Conditions

An extension user cannot edit the displayed number.

Default Setting

Enabled.

• Programming

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-08-05: Class of Service Options (Outgoing Call Service) - Dial Number Preview
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to use Dial Number Preview.

• Related Features

• Central Office Calls, Placing
In order to place an outgoing call, an extension user must have outgoing access to a line, loop or trunk group key.

• Operation

To use Dial Number Preview to place a call (system phone only):

1. Do not lift the handset or press a SPK key.

2. To preview any number, press *.
   To preview an Abbreviated Dial number, press DC.

3. Dial number you want to call.

The number displays.

4. To dial out the displayed trunk number, press a line/loop/trunk group key.

   If the previewed number as a trunk access code (e.g., 0), you can press CALL instead.

OR

To dial out the displayed Intercom number, press a SPK key.

OR

To cancel the number without Dialling it out, press HOLD.
**Dial Pad Confirmation Tone**

- **Description**

For an extension with Dial Pad Confirmation Tone enabled, the user hears a beep each time they press a key. This is helpful for Intercom calls and Dial Pulse trunk calls, since these calls provide no Call Progress tones.

**Conditions**

None

**Default Setting**

Disabled

- **Programming**

  20-06-01: Class of Service for Extensions  
  Assign a Class Of Service (1-15) to an extension.

  20-18-05: Service Tone Timer - System Phone Confirmation Tone  
  If required, change the Dial Pad Confirmation Tone frequency and duration.

- **Related Features**

  - **Single Line Telephones**  
    Dial Pad Confirmation Tone does not apply to single line telephones.

- **Operation**

  **To enable Dial Pad Confirmation Tone:**

  1. Press a SPK key
  2. Dial 824

  **To disable Dial Pad Confirmation Tone:**

  1. Press a SPK key
  2. Dial 824
Direct Inward Dialling (DID)

- **Description**

Direct Inward Dialling (DID) lets outside callers directly dial system extensions. DID saves time for callers who know the extension number they wish to reach. To place a DID call, the outside caller dials the number to ring the telephone system extension. For example, DID number 926-5400 can directly dial extension 400. The caller does not have to rely on attendant or secretary call screening to complete the call.

**Note:** Direct Inward Dialling requires DID service from the Network Provider.

In addition to direct dialling of system extensions, DID provides:

- DID Dialed Number Translation
- Flexible DID Service Compatibility
- DID Intercept
- DID Camp-On

**DID Dialed Number Translation**

DID allows different tables for DID number translation. This gives you more flexibility when buying DID service from telco. If you can't buy the exact block of numbers you need (e.g., 301-556 200-499), use the translation tables to convert the digits received. For example, a translation table could convert digits 501-756 500-799 to extension numbers 301-556 200-499.

The Topaz system has 2000 DID Translation Table entries that you can allocate among the 20 DID Translation Tables. There is one translation made in each entry. For a simple installation, you can put all 2000 entries in the same table. For more flexibility, you can optionally distribute the 2000 entries among the 20 tables.

In addition to number conversion, each DID Translation Table entry can have a name assigned to it. When the DID call rings the destination extension, the programmed name displays.

**Flexible DID Service Compatibility**

You can program the system to be compatible with up to 8 digit DID service. Be sure to program your system for compatibility with the provided telco service. For example, if the telco sends four digits, make sure you set up the translation tables to accept the four digits.

For analogue DID, the system is compatible with Dial Pulse (DP) and DTMF DID signalling. DID trunks can be either wink start or immediate start.

**DID Camp-On**

DID Camp-On sets what happens to DID calls to busy extensions when you have Busy Intercept disabled (22-11-04). With DID Camp-On enabled, a call to a busy extension camps-on. If Program 22-11-04 is set for No Answer step on, the call will step on after the DID Ring No Answer Time interval (22-01-06). It will step on to the programmed DID Intercept extension ring group or Voice Mail (22-11-05/06). Without DID Camp-On, the caller to the busy extension just hears busy tone.
DID Routing Through the VRS
DID calls can optionally route through the VRS. The DID caller hears an initial Automated Attendant Greeting explaining their dialling options. If the caller misdials, they can hear a second greeting with additional instructions. For example, the first Automated Attendant Greeting can be, “Thank you for calling. Please dial the extension number you wish to reach or dial 0 for the operator.” If the caller inadvertently dials an extension that doesn’t exist, they could hear, “The extension you dialled is unavailable. Please dial 0 for assistance or dial # to leave a message so we can call you back.”

You assign Automated Attendant greetings (i.e. VRS Messages) to the numbers in each Translation Table. This provides you with extensive flexibility when determining which greetings the system should play for which dialled numbers. You could, for example, set up 926 5401 through 926 5449 to route to extensions 301-349, and have 926 5450 route to the automated attendant.

SMDR Includes Dialed Number
The SMDR report can optionally print the trunk’s name (entered in system programming) or the number the incoming caller dialled (i.e., the dialed DID digits). This gives you the option of analysing the SMDR report based on the number your callers dial. (This option also applies to an ISDN trunk as well.)

DID Intercept
DID Intercept automatically reroutes DID calls under certain conditions. There are three types of DID Intercept:

- Vacant Number Intercept
  If a caller dials an extension that does not exist or misdials, Vacant Number Intercept can reroute the call to the programmed DID Intercept extension ring group or Voice Mail. Without Vacant Number Intercept, the caller hears error tone after misdialling.

- Busy Intercept
  Busy Intercept determines DID routing when a DID caller dials a busy extension. If Busy Intercept is enabled, the call immediately routes to the programmed DID Intercept extension ring group or Voice Mail. If Busy Intercept is disabled, the call follows DID Camp-On programming (see below).

- Ring-No-Answer Intercept
  Ring-No-Answer Intercept sets the routing options for DID calls that ring unanswered at the destination extension. With Ring-No-Answer Intercept enabled, the unanswered call reroutes to the DID Intercept extension ring group or Voice Mail after the DID Ring-No-Answer Time interval. If Ring-No-Answer Intercept is disabled, the unanswered call rings the destination until the outside caller hangs up.

DID Intercept Destination for Each DID Number
With this feature the system allows you to program a DID Intercept destination for a DID number which receives no answer or busy call. The system can be programmed to use a trunk ring group, the VRS or the voice mail as the programmed destination. Each DID number can have two destinations. The first destination is for an invalid DID number, busy or no answer extension. The second destination is for a no answer trunk ring group.
This feature works for DID trunks with a trunk service type 1 in Program 22-02. Other types of trunks may use the DID table, but the new DID intercept feature is not yet supported.

With the DID Intercept for each DID number feature, when the primary destination (Program 22-11-05) is set to Voice Mail, the Voice Mail protocol is:

1. Busy Intercept = Forward Busy
2. Ring-No-Answer Intercept = Forward RNA

When the secondary destination (Program 22-11-06) is set to Voice Mail, the Voice Mail protocol is based on the first destination's routing. When the incoming call is forwarded to the first destination by a busy intercept, the Voice Mail protocol will be that it forwards busy calls. When the incoming call is routed to the first destination by a ring-no-answer intercept, the protocol will be that it forwards ring-no-answer. The Voice Mail will transfer the calls to the mailbox number defined in Program 22-11-02.

**Note:** Any valid DID number must be entered in the DID table (Program 22-11). If a valid DID number is not entered, there will be no ring destination for any incoming calls to that number (the calls will not ring any extension in the system).

**Conditions**

A. DID service must be purchased from your local telephone company
B. DID Intercept for each DID number works for DID trunks with a trunk service type 1 in Program 22-02. Other types of trunks may use the DID table, the DID intercept feature is not supported
C. BRI DID requires a BRI PCB and Option Box.

**Default Setting**

Disabled.

**Programming**

14-05-01 : Trunk Groups
Put DID trunks in the same trunk group (other than group 1).

15-07-01 : Programming Function Keys
You can assign line keys for DID trunks (01-50). Without line keys, DID calls ring line appearance (CALL) keys.

20-09-01 : Class of Service Options (Incoming Call Service) - Second Call for DID/ DISA/ DIL
Enable (1) or disable (0) an extension’s ability to receive a second call from a DID, DISA or DIL, caller.

22-01-06 : System Options for Incoming Calls - DID Ring-No-Answer Time
Set the DID Ring-No-Answer (RNA) Intercept interval (0-64800 seconds). In systems with RNA Intercept, the DID call rings the destination extension for this interval and then rings Intercept Ring Group. This also sets how long the system should let an unanswered DID ring before transferring the call to the DID Intercept’s first destination.
22-02-01 : Incoming Call Trunk Setup
For each Night Service Mode, enter service type 3 when the trunk should be a DID trunk.

22-04-01 : Incoming Extension Ring Group Assignment
Assign extensions to Ring Groups. Calls ring the extensions according to programming in 22-06.

22-09-01 : DID Basic Data Setup - Expected Number of Digits
For each DID Translation Table (1-20), enter the number of digits the table expects to receive from the CO (8 maximum). For example, for a table used with 3-digit DID service, enter 3.

22-09-02 : DID Basic Data Setup - Received Vacant Number Operation
Selectively enable (1) or disable (0) Vacant Number Intercept based on each DID Translation Database (Program 22-11-01 and 22-11-02).

22-10-01 : DID Translation Table Setup
Assign the start and end range of DID Translation Table entries (1-2000) to each DID Translation Table (1-20).

22-11-01 : DID Translation Table Number Conversion - Received Number
For each DID Translation Table entry (1-2000), specify the digits received by the system (eight max.).

22-11-02 : DID Translation Table Number Conversion - Target Number
For each DID Translation Table entry (1-2000), specify the extension the system dials after translation (36 digits max.)

22-11-03 : DID Translation Table Number Conversion - Dial-In Name
For each DID Translation Table entry (1-2000), specify the name that should show on the dialled extension’s display when it rings (twelve characters max.)

22-11-04 : DID Translation Table Number Conversion - Transfer Operation Mode
For each DID Translation Table entry (1-2000), specify the condition required to transfer to the call to the destination defined in 22-11-05 and 22-11-06.

22-11-05 : DID Translation Table Number Conversion - Transfer Destination 1
22-11-06 : DID Translation Table Number Conversion - Transfer Destination 2
For each DID Translation Table entry (1-2000), specify the first and second Transfer Destinations if the callers receives a busy or no answer (action defined in 22-11-04).
(Destination Options: 0 = No setting, 01-25 = Incoming Group, 101 = DSPDB Voice Mail, 201-232: Department Group, 400 = VRS/AA, 401 = DISA, 1000-1999 = Abbreviated Number (000-999))
If the Transfer Destinations are busy or receive no answer, those calls are transferred to the final transfer destination (Program 22-10).

22-11-07 : DID Translation Table Number Conversion - Call Waiting (DDI Camp On)
For each DID Translation Table entry (1-2000), specify whether Call Waiting should be allowed (0=disable, 1=enable).
22-11-08 : DID Translation Table Number Conversion - Maximum Number of Calls
For each DID Translation Table entry (1-2000), specify the maximum number of DID calls (00-51).

22-11-09 : DID Translation Table Number Conversion - MOH Source
For each DID Translation Table entry (1-2000), specify the source of music to be used for DID trunks (0=MOH port, 1=BGM port, 2=Music Source port).

22-11-10 : DID Translation Table Number Conversion - Music Source Port Number
For each DID Translation Table entry (1-2000), if item 2 is selected in 22-11-09, specify the port to be used for the source of music heard on DID trunks.

22-12-01 : DID Intercept Ring Group
For each DID Translation Table, program the DID Intercept destination. The destination can be a Ring Group (01-25), or DSPDB Voice Mail=101. This program is used when there is no destination programmed in Program 22-12-05. It is unrelated to Program 22-12-06.

22-13-01 : DID Trunk Group to Translation Table Assignment
Assign the DID trunk groups (01-25) to translation tables. If all the DID trunks use the same type of DID service, you may have only one DID trunk group and one DID Translation Table (with many entries).

• Related Features

  • Central Office Calls, Answering
    When a call is transferred because of Call Forwarding No Answer, Call Forwarding Busy, or DND, the Reason for Transfer option can display to the transferred extension why the call is ringing to their phone.

  • Direct Inward Line (DIL)
    DILs also provide a way for outside callers to dial a system extension, virtual extension or Department Group directly.

  • Direct Inward System Access (DISA)
    DISA also allows outside callers to dial system extensions directly.

  • Off Hook Signalling
    The Off Hook Signalling provide DID calls with signalling options. Refer to this feature for the specifics.

  • Programmable Function Keys
    To simplify answering DID calls, assign function keys as line keys for the DID trunks.

  • Station Message Detail Recording
    SMDR can print trunk port names or received dialled number for ANI/DNIS or DID trunks. If enabled, DNIS digits can be printed on the SMDR reports instead of the trunk name.
• **Operation**

DID calls ring extensions like normal trunk calls.
Direct Inward Line (DIL)

• Description

A Direct Inward Line (DIL) is a trunk that rings an extension, virtual extension or Department Group directly. Since DILs only ring one extension or group (i.e., the DIL destination), employees always know which calls are for them. For example, a company operator can have a Direct Inward Line for International Sales Information. When outside callers dial the DIL’s phone number, the call rings the operator on the International Sales line key. The DIL does not ring other extensions.

DIL Delayed Ringing

Extensions in a Ring Group can have delayed ringing for another extension’s DIL. If the DIL is not answered at its original destination, it rings the DIL No Answer Ring Group. This could help a Technical Service department, for example, that covers calls for an Inside Sales department. If the Inside Sales calls are not answered, they ring into the Technical Service department.

Conditions

A. If unanswered, a DIL without delayed ringing rings an extension until the outside party hangs up.
B. If a DIL rings a Department Group and all agents are busy, the system routes the call as follows:
   1. The trunk rings the overflow destination assigned in 22-08.
   2. If there is 22-08 assignment or PC Attendant, the call rings according to the Ring Group assignments in 22-04 and 22-05.
   3. If none of the destinations in steps 1-3 above are available, the call continues to ring until a destination becomes free.
C. The DIL follows call forwarding programming, even to voice mail.

Default Setting

Disabled.

• Programming

14-07-01: Trunk Access Map Setup

Set up the Trunk Access Maps. All extensions should have at least Hold access to the DIL (entry 3). Without Hold access, transferred DILs and DILs on hold can be answered only while they are ringing or recalling.

15-06-01: Trunk Access Map for Extensions

Assign Trunk Access Maps to extensions (1-51).

15-07-01: Programming Function Keys

To have the DIL ring a key, program a line key for the DIL trunk.

20-09-01: Class of Service Options (Incoming Call Service) - Second Call for DID/ DISA/ DIL

Enable (1) or disable (0) an extension’s ability to receive a second call from a DID, DISA or DIL, caller.

22-01-04: System Options for Incoming Calls - DIL No Answer Time

Set the DIL No Answer Time (0-64800 seconds). If DIL Delayed Ringing is set in program 22-08, this option sets the DIL Delayed Ring interval.

22-02-01: Incoming Call Trunk Setup
Assign each DIL Service Type 4. Make an entry for each Night Service mode.

22-04-01: Incoming Extension Ring Group Assignment
Assign the extensions that should receive the overflow to the ring group programmed in 2208. Set the ringing in Program 22-06 (0=trunks don’t ring [just flash line keys], 1=trunks ring).

22-07-01: DIL Assignment
Set the destination extension port for each DIL - for each Night Service mode. The destination can be an extension port, virtual extension port, or Department Group.

22-08-01: DIL/IRG No Answer Destination
For each DIL with delayed ringing, enter the DIL No Answer Ring Group. An unanswered DIL rings this group after the DIL No Answer Time. Make an entry for each Night Service mode (Ring Group (1-25) or DSPDB Voice Mail=101).

22-11-11: DID Translation Number Conversion, Ring Group Transfer
Enable (1) or disable (0) each conversation tables’ ability to follow the Ring Group programming defined in Program 22-12-01: DID Intercept Ring Group. If Program 22-11-05: DID Translation Number Conversion, Transfer Destination Number 1 and Program 22-11-06: DID Translation Number Conversion, Transfer Destination Number 2 are set, the priority of transferring will be in this order: Program 22-11-05 then Program 22-11-06 then if Program 22-11-11 is enabled, Program 22-12-01.

25-01-01: DID/DISA Line Basic Data Setup - DID/DISA Dial-In Mode
Determine whether the system should use option 0 (Extension number/Service code specify) or option 1 (Use dial conversion table) for calls.

25-01-03: DID/DISA Line Basic Data Setup - DID/DISA Transfer Alarm
Determine whether the system should use option 0 (Normal) or option 1 (Alarm) for calls.

If VRS facility (DSPDB Unit) is available:

25-02-01: DID/DISA VRS Message
For each DID/DISA trunk port (1-51) and each night mode (1-8), select the message source (0=No Message, 1=VRS, 2=ACI, 3=SLT) and assign the VRS message number to be used as the Automated Attendant Message for each trunk which is assigned as a DID/DISA (Additional data required with VRS=01-48 [VRS message number], with ACI=1-4 [ACI group number], and with SLT=1-32 [Station group number]).

25-03-01: DID/DISA Transfer Ring Group With Incorrect Dialling
For each trunk port (1-51), set what happens to a call when the DISA or Automated Attendant caller dials incorrectly or waits too long to dial. The call can either disconnect (0) or Transfer to an alternate destination (Ring Group=1-25 or DSPDB Voice Mail=101). When setting the DISA and DID Operating Mode, you make an entry for each Night Service mode (1-8).

25-04-01: DID/DISA Transfer Ring Group With No Answer/Busy
For each trunk port (1-51), set the operating mode of each DISA trunk. This sets what happens to the call when the DISA or Automated Attendant caller calls a busy or unanswered extension. The call can either disconnect (0) or Transfer to an alternate destination (Ring Group=1-25 or DSPDB Voice Mail=101). When setting the DISA and DID Operating Mode, you make an entry for each Night Service mode (1-8).

**25-05-01 :DID/DISA Error Message Assignment**
For each trunk that will be answered by the VRS, enter the VRS message number (1-48) the outside caller hears if they dial incorrectly after answer. If you enter 0, the call reroutes according to Program 25-03 and Program 25-04. Make one entry for each Night Service mode.

**25-06-02 :DID/DISA One-Digit Code Attendant Setup**
Set up single digit dialling for Automated Attendant callers. For each VRS Message programmed to answer outside calls, specify:
- The digit the Automated Attendant caller dials (0-9, *, #). (Keep in mind that if you assign destinations to digits used for extension numbers, outside callers will not be able to dial system extensions.)
- The destination reached (four digits maximum) when the caller dials the single digit code.

**25-07-01 :System Timers for DID/DISA - VRS Dial Tone Time**
After answering a DID/DISA trunk, the system waits this interval for the caller to dial the first digit of the DISA password. If the caller fails to dial within this interval, the system drops the call (0-64800).

**25-07-02 :System Timers for DID/DISA - DID/DISA No Answer Time**
A DID/DISA caller can ring an extension for this interval before the system sets the call as a Ring No Answer. After this interval expires, the call follows the programmed Ring No Answer routing (set in Program 25-03 and 25-04) (0-64800).

**25-07-04 :System Timers for DID/DISA - Calling Time to Automatic Answering Telephone Set**
Set the answering waiting time of the automatic answering extension when an incoming DID trunk call is received (0-64800).

**25-07-05 :System Timers for DID/DISA - Duration Time for Guidance Message by Automatic Answering Telephone Set**
Set the announcement time of the automatic answering extension after which in incoming DID trunk caller is disconnected (0-64800).

**25-07-06 :System Timers for DID/DISA - Duration Time for Guidance Message by ACI**
Set the announcement time by the ACI after which an incoming DID trunk caller is disconnected (0-64800).

**25-07-11 :System Timers for DID/DISA - DID/DISA Answer Delay Timer**
Set up the interval time the system will wait after receiving an incoming DID/DISA call until the system will automatically answer the call (0-64800).

**25-07-13 :System Timers for DID/DISA - DID/DISA Busy Tone Interval**
If a DISA or Automated Attendant caller dials a busy extension (and Program 25-04-01 = 0), the system plays busy tone for this interval before disconnecting (0-64800).

25-07-14 :System Timers for DID/DISA - Delayed DID Answer Timer
Assign the delay time from switching from a normal incoming status to DID mode. If this time is set to '0', the call will switch to DID mode immediately (0-64800).

• Related Features
  • Call Forwarding
    Call Forwarding reroutes DILs.
  • Central Office Calls, Answering
    When a call is transferred because of Call Forwarding No Answer, Call Forwarding Busy, or DND, the Reason for Transfer option can display to the transferred extension why the call is ringing to their phone.
  • Central Office Calls, Placing
    You can place DILs in trunk groups to make outgoing DIL calls easier.
  • Department Calling
    A DIL can have an Extension (Department) Group as its destination.
  • Do Not Disturb
    If a DIL's destination extension is in DND, an incoming call rings according to Ring Group programming.
  • Group Call Pickup
    A user can activate Group Call Pickup to intercept a DIL ringing another extension.
  • Name Storing
    Program a name for a DIL. This makes it easier to identify the incoming call.
  • Private Line
    To simulate Private Line operation, create a unique Access Map for the DIL that allows full access only for the destination. Give all other extensions only Hold access.
  • Off Hook Signalling
    If a system phone’s first channel is busy, a DIL always signals the idle second channel if available. If the second channel already has a call waiting, DIL waits in line for a channel to become free. The outside caller hears ringback tone while this occurs.
  • Programmable Function Keys
    If an extension has a line key for a DIL, the call will ring the key. If not, the call rings an available line appearance. For other extensions, the DIL indicates as busy.
  • Ring Groups
    A DIL will ring its assigned extension without Ring Group programming. A DIL only rings its assigned extension. It will not ring other extensions in a Ring Group.
• Operation

To answer a call on your Direct Inward Line:

1. Lift handset.
2. At system phone, press flashing line key for DIL.
   
   If you don't have a line key for the DIL, the DIL rings a CALL key.
   
   If you have Ringing Line Preference, lifting the handset answers the call.
   
   If you don't answer the call, it may ring other extensions (i.e., the DIL No Answer Ring Group).

To place a call on your Direct Inward Line:

1. Lift handset.
2. At system phone, press line key for DIL
   
   OR
   Dial 805 and the DIL trunk number (e.g., 05).
   
   OR
   Dial 804 and the DIL trunk group number (e.g., 05).
   
   OR
   Dial 0 for Trunk Group Access
3. Dial number.
**Direct Inward System Access (DISA)**

- **Description**

DISA permits outside callers to directly dial system extensions, trunks and selected features. This could help an employee away from the office that wants to directly dial co-workers or use the company's trunks for long distance calls. To use DISA, the employee:

- Dials the telephone number that rings the DISA trunk
- Waits for the DISA trunk to automatically answer with a unique dial tone
- Dials the 6-digit DISA password (access code)
- Waits for a second unique dial tone
- Accesses a system trunk, uses a selected feature or dials a system extension

DISA calls ring system extensions like other outside calls. If an extension has a line key for the DISA trunk, the call rings that key. If the extension does not have a line key, the call rings a CALL key.

You can set DISA operation differently for each Night Service mode. For example, a trunk can be a normal trunk during the day and a DISA trunk at night. You can also set the routing for DISA trunks when the caller dials a busy or unanswered extension, dials incorrectly or forgets to dial.

**DISA Class of Service**

DISA Class of Service provides features and Dialling restrictions for DISA callers. This allows you to control the capabilities of the DISA callers Dialling into your system.

When a DISA caller first accesses the system, they must enter a DISA password before proceeding. The system associates the password entered with a specific user number, which in turn has a Class of Service. If the Class of Service allows the action (such as making outgoing trunk calls), the call goes through. If the DISA Class of Service doesn't allow the action, the system prevents the call. The DISA Class of Service options are:

- **Trunk Group Routing/ARS Access**
  When a DISA caller dials into the system, they may be able to dial 0 and place outside calls. Any toll charges are incurred by the system. The call follows the system's Trunk Group Access or Automatic Route Selection - whichever is enabled.

- **Trunk Group Access**
  DISA callers may be able to access a specific trunk group for outgoing calls through the system. To access a Trunk Group, the user dials Service Code 804 followed by the Trunk Group number (e.g., 01). This allows the DISA caller to place an outgoing call over the selected group. Trunk Group Access bypasses the system's Trunk Group Routing/ARS/Trunk Access Maps. As with dial 0 access, any toll charges are incurred by the system. Also see Direct Trunk Access below.

- **Common Abbreviated Dialling**
  The system's Common Abbreviated Dialling bins may be available to DISA callers. This could save the DISA caller time when Dialling.

- **Operator Calling**
  A DISA caller may be able to dial 9 for the system's operator.
• Paging
  Internal and External Paging may be available to DISA callers. This allows co-workers in adjacent facilities, for example, to broadcast announcements to each other.

• Direct Trunk Access
  DISA callers may be able to select a specific trunk for outgoing calls through the system. To directly access a trunk, the user dials Service Code 805 followed by the trunk’s number (e.g., 01). This allows the DISA caller to place an outgoing call over the selected trunk. Direct Trunk Access bypasses the system’s Trunk Group Routing/ARS/Trunk Access Maps. As with dial 0 access, any toll charges are incurred by the system. Also see Trunk Group Access above.

• DISA Trunk Barge In
  The DISA Trunk Barge In option allows a caller to break into another extension’s established call. This sets up a three-way conversation between the intruding party and the two parties on the initial call.

**DISA Toll Restriction**
The digits a DISA caller dials for an outgoing call may be subject to the system’s Toll Restriction.

**DISA Operating Modes**
The DISA Operating Modes determine what happens when a DISA caller forgets to dial, calls a busy or unanswered extension or dials incorrectly. The system can either drop the call or send it to a preset Ring Group (called a DISA Transfer Destination).

**Department Calling with Overflow Message**
If a DISA caller dials a busy Department Calling Group, the system can periodically play the voice prompt, “Please hold on. All lines are busy. Your call will be answered when a line becomes free.” while the caller waits. The interval between the voice prompts is the DISA Overflow Message Time. When an extension in the Department Group becomes available, the call automatically goes through. If the Department Calling Group remains busy past the DISA No Answer Time, the DISA call routes to the overflow destination or disconnects. (What happens to the unanswered call is set by the DISA Operating Mode). The Overflow Message requires a VRS.

**DISA Dial in Mode**
You can select the method that the digits dialled by a DISA caller are routed by the system by Program 25-01-01.

You can select Intercom mode where the received digits are used to route the DISA caller or you can select Convert mode where the received digits are passed to the DDI Conversion table.

When you select the Convert mode the operation of the DISA call is the same as a DDI call, as follows:

The trunk port that the DISA call is received on will define the trunk group number (Program 14-05-01).
The trunk group number will define the DDI table area for each night mode (Program 22-13-01).

The DDI table area is defined by Program 22-10-01. You now have the DDI conversion table to be used as the convert table.

The quantity of digits that the DISA caller must dial is defined by Program 22-09-01 (default is 4 digits).

The digits received are then compared to the receive dial entries of the DDI table (Program 22-11-01), if an exact match is found the call will be routed to the DDI target number (Program 22-11-02). If a match is not found the DISA call will be disconnected.

If the DDI target number is invalid the call will not use the DISA option for Wrong Dial (Program 25-03-01). If the DDI target is invalid the options for the DDI will be used (Program 22-11-06 & 06).

If the DDI target number is busy/no answer the call will not use the DISA option for Busy/RNA (Program 25-04-01). If the DDI target is busy/RNA the options for the DDI will be used (Program 22-11-04).

**DISA Password/User ID**
You can enable/disable the DISA password per trunk port by Program 25-01-02. When enabled all DISA callers must enter a valid 6-digit password before the call can proceed; the passwords are defined in Program 25-08-01. The DISA password is used to assign a DISA Class of Service.

If the DISA password is disabled the incoming caller does not need to enter any password to access all of the DISA options.

Care should be taken when the password is disabled as any DISA caller can access outgoing trunks and paging zones etc.

**Warning Tone for Long DISA Calls**
You can set up the system to provide a warning tone to DISA callers that have been on a call too long. The warning tone can be just a reminder (which the caller can ignore) or can be followed by a forced disconnect of the call. When the DISA caller hears the warning tone, they have the option of Dialling a code to continue the conversation or disconnect.

**Conditions**

A. The DISA caller must use a DTMF dial telephone. DISA is compatible with calling devices that meet the DTMF signalling requirements of EIA Specification RS-464. DISA trunks must be supervised loop start.

B. When accessing Topaz from a remote location via a DISA trunk, a specific DISA tone will first be heard when the system answers (a fast alternating tone). After the correct password is entered to allow system access, the tone changes to a mono tone. It is at this time that allowable system features can be accessed, e.g., access code for internal paging. If the caller enters the wrong password (a warning tone will be heard), they can repeat the password entry up to 3 times before being disconnected.

**Default Setting**

Disabled.
• **Programming**

  **10-09-01: DTMF and Dial Tone Circuit Setup**
  Reserve at least one circuit for DTMF reception (entry 0 or 2).
  - Use the following as a guide when allocating DTMF receivers:
    - In light traffic sites, allocate one DTMF receiver for every 10 devices that use them.
    - In heavy traffic sites, allocate one DTMF receiver for every five devices that use them.

  **11-01-01: System Numbering**
  Set up a Service Code for Alternate Trunk Route Access.

  **11-09-02: Trunk Access Code - Alternate Trunk Route Access Code**
  Assign the Service Code set up in 11-01 for Alternate Trunk Route Access.

  **14-01-02: Basic Trunk Data Setup - Transmit CODEC Gain Type**
  Customise the CODEC gains (transmit and receive levels 1-63) for DISA trunks.

  **14-01-13: Basic Trunk Setup - Loop Disconnect Supervision**
  If DISA caller can place outgoing calls through the system (see Program 20-14), enable loop supervision (1) for the DISA trunk. If DISA caller cannot use the system’s trunks for outgoing calls, enter 0 to disable loop supervision.

  **20-01-05: System Options - DTMF Receiver Active Time**
  After answering the call, the system attaches a DTMF receiver to the DISA trunk for this interval (0-64800 seconds).

  **20-09-01: Class of Service Options (Incoming Call Service) - Second Call for DID/DISA**
  Enable (1) or disable (0) an extension’s ability to receive a second call from a DID, DISA, or DIL caller.

  **20-14-01 - 20-14-11: Class of Service Options for DISA**
  Enable (1) or disable (0) the following options for each DISA Class of Service (1-15).
  - First Digit Absorption (Item 1)
  - Trunk Group Routing/ARS Access (Item 2)
  - Trunk Group Access (Item 3)
  - Common Abbreviated Dialling (Item 4)
  - Operator Calling (Item 5)
  - Internal Paging (Item 6)
  - External Paging (Item 7)
  - Direct Trunk Access (Item 8)
  - Forced Trunk Disconnect (Item 9)
  - Call Forward Setting by Remote Via DISA (Item 10)
  - DISA Trunk Barge In (Item 11)

  **21-15-01: Alternate Trunk Route for Extensions**
Designate the trunk route accessed when a user dials the Alternate Trunk Route Access Code. Refer to “Trunk Group Routing” to set up outbound routing.

22-01-11: System Options for Incoming Calls - VRS Waiting Message Interval Time
Setup the sending duration time of the Auto-Attendant & Queuing. The message is repeatedly sent out within the specified time (0-64800 seconds).

22-02-01: Incoming Call Trunk Setup
For DISA operation, set the trunk service type to 02. You can have a different service type for each Night Service mode.

22-04-01: Incoming Extension Ring Group Assignment
Assign the extensions that should receive the overflow. Set the ringing in Program 22-06 (0=trunks don’t ring [just flash line keys], 1=trunks ring).

25-03-01: DID/DISA Transfer Ring Group With Incorrect Dialling
Assign the extensions that should receive the overflow. Set the ringing in Program 22-06 (0=trunks don’t ring [just flash line keys], 1=trunks ring).

25-04-01: DID/DISA Transfer Ring Group With No Answer/Busy
Set the operating mode of each DISA trunk. This sets what happens to the call when the DISA caller calls a busy or unanswered extension. The call can either disconnect (0), transfer to an alternate ring group destination (1-25), or transfer to DSPDB Voice Mail (101).

25-07-01: System Timers for DID/DISA - DISA Dial Tone Time
After answering the DISA trunk, the system waits this interval (0-64800 seconds) for the caller to dial the first digit of the password. If the caller fails to dial within this interval, the system drops the call.

25-07-02: System Timers for DID/DISA - DID/DISA No Answer Time
A DISA caller can ring an extension for this interval (0-64800 seconds) before the system sets the call as a Ring No Answer. After this interval expires, the call follows the programmed Ring No Answer routing (see Program 25-04 below).

25-07-07: System Timers for DID/DISA - DISA Conversation Warning Tone Time
Determine the length of time a DISA caller can talk before the Long Conversation tone is heard (0-64800 seconds).

25-07-08: System Timers for DID/DISA - DISA Long Conversation Disconnect
This timer determines how long the system will wait before disconnecting a call after the Long Conversation tone is heard (0-64800 seconds).

25-07-09: System Timers for DID/DISA - DISA Internal Paging Time
This is the maximum length of an Internal Page placed by a DISA caller. If the Page continues longer than this interval (0-64800 seconds), the system terminates the DISA call.

25-07-10: System Timers for DID/DISA - DISA External Paging Time
This is the maximum length of an External Page placed by a DISA caller. If the Page continues longer than this interval (0-64800 seconds), the system terminates the DISA call.

25-07-13: System Timers for DID/DISA - DID/DISA Busy Tone Interval
If a DISA caller dials a busy extension (and Program 25-04 = 0), the system plays busy tone for this interval before disconnecting.

25-08-01: DISA User ID Setup
For each DISA user, set the 6-digit password.

25-09-01: Class of Service for DISA Users
Assign a DISA Class of Service for each user. The DISA Class of Service cannot be 0. You cannot use the 20-xx-xx and 42-xx-xx programs to assign Class of Service to DISA trunks (15 users, with one password and DISA Class of Service (1-15) for each user).

25-10-01: Trunk Group Routing for DISA
Use this program to assign the Trunk Group Route (1-25) chosen when a user places a DISA call into the system and dials 0. Set Trunk Group Routing in Program 14-06. If the system has ARS, Dialling 0 accesses ARS. The route chosen is based on the DISA Class of Service, which is determined by the password the caller dials.

25-11-01: DISA Toll Restriction Class
If the system uses Toll Restriction, enter a Toll Restriction Class (1-15) for each DISA user (1-15). The system uses the Toll Restriction Class you enter in Program 21-05. The Toll Restriction Class assigned to a DISA call is based on the DISA Class of Service, which is determined by the password the caller dials. You cannot use Program 21-04 to assign Toll Restriction to DISA trunk.

25-12-01: Alternate Trunk Group Routing for DISA
Assign the trunk route that DISA Caller’s access if they dial the Alternate Trunk Route Access Code. Refer to “Central Office Calls, Placing” for more on setting up Alternate Trunk

- Related Features
  - Automatic Route Selection
    In a system with ARS enabled:
    When a DISA caller dials 0 for an outside call (if allowed), the system routes the call via ARS.
    In a system with ARS disabled:
    When a DISA caller dials 0 for an outside call (if allowed), the system uses the routes programmed for Trunk Group Routing.
  - Central Office Calls, Answering
    When a call is transferred because of Call Forwarding No Answer, Call Forwarding Busy, or DND, the Reason for Transfer option can display to the transferred extension why the call is ringing to their phone.
  - Direct Inward Dialling (DID) / Direct Inward Line (DIL) / Voice Response System (VRS)
    These features also allow outside callers to directly access system extensions.
  - Long Conversation Cutoff
Long conversation cutoff is controlled separately for DISA.

- **Voice Response System (VRS)**
  Department Calling with Overflow Message requires a DSP daughter board for VRS.

**Operation**

To place a DISA call into the system (from any DTMF dial telephone):

1. Dial the telephone number that rings the DISA trunk.
2. Wait for the DISA trunk to automatically answer with a unique dial tone.
3. Dial the 6-digit DISA password (access code).
4. Wait for a second unique dial tone.
   - OR
   - OR
   - OR
   - OR
   - OR
   - OR
   - OR
   - OR
   - OR
   - OR
   Dial 0 for Trunk Group Routing or ARS.
   Dial 804 + a trunk group number (1-25) for an outside call.
   Dial 805 + a trunk number (1-51) for an outside call.
   Dial 813 + Common Abbreviated Dialling bin number.
   Dial 9 for the operator.
   Dial 801 + an Internal Paging Zone number (0, 1-6,00,01~32).
   Dial 803 + an External Paging Zone number (1-2 or 0 for All Call).
   Dial 810 + a busy extension number to barge in to a call.
   Dial 828 to set the time + two digits for two digits for hour (24 hour clock, 13=1:00 PM) + two digits for minutes.
Direct Station Selection (DSS) Console

• Description

The DSS Consoles (64-Button, 24-Button) gives a system phone user a Busy Lamp Field (BLF) and one-button access to extensions, trunks and system features. This saves time for users that do a lot of call processing (e.g., operators or dispatchers). The DSS Console simplifies:

- Calling extensions and Doorphones
- Placing, answering and transferring outside calls
- Making an External or Internal Page
- Switching the Night Service mode
- Activating DSS Console Alternate Answer

The 64 button DSS Console also provides DSS Console Alternate Answer. This lets a system phone user with a DSS Console quickly reroute their calls to a co-worker.

You can also program the DSS Console keys to store Function codes. This provides the DSS Console user with many of the features available on Programmable Feature Keys.

The maximum number of DSS Consoles allowed is 9. There is no limit on the number of 64-button DSS consoles per extension, but an extension can have only one 24-button DLS console. An extension can, however, have both a 24-button DSS and 64-button DLS console(s) installed.

Installation of the Consoles

The 64-button console plugs into the eight port of the 308M/308E/008E unit and is assigned to a system phone in Program 30-02. The keys are set in Program 30-03, each key has a function number and optional additional data.

The 24-button console plugs into any display-type system phone via the socket in the base of the phone, it does not take a port on the system. The keys are set either via Program 15-07 or by service codes 851/852 from the system phone it is plugged into. Each key has a function number and optional additional data.

Conditions

A. Changing flash patterns for DSS Consoles will also change them for Hotline keys.
B. When installing a DSS, the system must auto-detect the console in order for the LEDs to function correctly. When connecting the DSS to a extension previously defined with another circuit type, redefine the circuit type (enter 00 in Program 10-03 for the extension number), then connect the DSS Console.
C. To program the keys on a 24-Button DLS in Program 15-07, use the extension number to which the DLS is installed and, regardless of the type of system phone connected, **start programming the DLS keys at key number 23.**
Default Setting

- No 64-button DSS Consoles assigned (in Program 30-02).
- All 64-button DSS Console key ranges are DSS/One Touch for extension numbers 200-295.
- Once a 64-button DSS Console is enabled, the console's keys are DSS/One Touch keys (Program 30-03).
- Once a 24-button console is attached the keys are Not Defined (Program 15-07).

• Programming

10-03-01: Terminal Type
The system automatically assigns the terminal type (10) for the port which has a 64-button DSS console installed.

10-03-09: PCB Setup

15-07-01: Programming Function Keys
Assign function keys to the DSS consoles. When programming a 24-Button DSS key, use the extension number to which the DSS is installed and, regardless of the type of system phone connected, start programming the DSS keys at key number 25 (Key 25=DSS key 1).

20-06-01: Class of Service for Extensions
Assign Class of Service (1-15) to extensions.

30-02-01: DSS Console Extension Assignment
Designate the 64-button DSS Console installations (i.e., the extensions that have 64-button DSS Consoles assigned to them).

30-03-01: DSS Console Key Assignment
Customise 64-button DSS Console keys to function as DSS keys and Function Code keys.

• Related Features

- Central Office Calls, Answering and Placing
A DSS Console can have line keys for placing and answering calls.

- Doorphone
The 64-button DSS Console provides one-touch calling and a Busy Lamp Field for Doorphones. Refer to the Doorphone Feature when programming Doorphone.

- Night Service
The 64-button DSS Console provides one-touch Night Service switching. Refer to the Night Service feature when programming Night Service options.

- Paging, External and Internal
The 64-button DSS Console provides one-touch External and Internal Page zone access. Refer the External Paging and Internal Paging features when programming Paging.

- Programmable Function Keys
You can program the DSS Console keys with function codes to provide the functions of many of the Programmable Function keys.
• Operation

Calling an extension from your DSS Console:
Optional for 64-Button Consoles.

1. Press DSS Console key.
   If the call voice-announces, you can make it ring by Dialling 1.
   If you don’t have Handsfree, you must lift handset to speak.

Placing a trunk call from your 24-Button DSS Console:

1. Press DSS Console key assigned to trunk.
2. Dial outside number.
   If you don’t have Handsfree, you must lift the handset to speak.

Answering a trunk call from your DSS Console:

1. Press flashing DSS Console key assigned to trunk.
   If you don’t have Handsfree, you must lift the handset to speak.

Calling a Doorphone from your 64-button DSS Console:

1. Press DOOR1 or DOOR2.
2. Press DSS Console key for Doorphone you want to call (1-6).
   If you don’t have Handsfree, you must lift the handset to talk to the Doorphone.

Transferring a call using your DSS Console:

1. Place or answer call.
   If you are on an Intercom call, press HOLD before going to the next step.
2. Press DSS key for extension that will receive transfer.
   You cannot Transfer to an extension that is busy or in Do Not Disturb.
3. (Optional) Announce call.
   If called party doesn’t want the call, press flashing line or CALL key to retrieve it.
4. Press SPK to hang up.

Making a External Page using your 64-button DSS Console:

1. Press DSS Console External Page zone key (EZ1, EZ2 or EAZ).
   If the zone you want is busy, try again later.
   If you don’t have Handsfree, lift the handset to make your announcement.

Making an Internal Page using your 64-button DSS Console:

1. Press DSS Console Internal Page zone key (IZ1 – IZ4).
   If the zone you want is busy, try again later.
   If you don’t have Handsfree, lift the handset to make your announcement.

Switching the Night Service mode from your 64-button DSS Console:

1. Press Night Service (NT) key.
Using a DSS Console key as a Programmable Function Key:

You can store Function codes under DSS Console keys.

1. Press DSS Console key for function.

For example, you can Forward your calls by pressing DSS Key + 1 + destination. Your DSS key must have been previously programmed for the Call Forward feature.
Directed Call Pickup

• Description

Directed Call Pickup permits an extension user to intercept a call ringing another extension. This allows a user to conveniently answer a co-worker’s call from their own telephone. With Directed Call Pickup, an extension user can pick up:

• Trunk calls (i.e., Ring Group calls)
• Direct Inward Lines
• Transferred trunk calls
• Transferred Intercom calls
• Ringing and voice-announced Intercom calls

Conditions

A. Directed Call Pickup does not pick up calls recalling an extension (such as Hold and Transfer recalls) or calls on Hold.

B. An extension can use Directed Call Pickup to intercept calls to which it is denied access in Programs 14-07 and 15-06.

Default Setting

Enabled.

• Programming

20-10-05: Class of Service Options (Answer Service) - Directed Call Pickup for Own Group

Enable (1) or disable (0) an extension’s ability to use Directed Call Pickup for calls ringing their own group.

• Related Features

For other features which let you cover a co-worker’s calls, refer to:

• Department Calling
• Group Call Pickup
• Hotline
• Multiple Directory Numbers
• Secretary Call Pickup

Hold/Transfer

Calls which were on hold or transferred which recall the extension can be answered using Directed Call Pickup.

Park

Personal Park also uses the Directed Call Pickup code.

Voice Mail

Voice Mail Park and Page also uses the Directed Call Pickup code.

• Operation

To use Directed Call Pickup to intercept a call to a co-worker’s extension:
1. At system phone, press a SPK key.
   OR
   At single line set, lift handset.

2. Dial 715.

3. Dial number of extension whose call you want to intercept.

   If more than one call is coming in, the system sets the priority for which call it will answer first.
Do Not Disturb

• Description

Do Not Disturb blocks incoming calls and Paging announcements. DND permits an extension user to work by the phone undisturbed by incoming calls and announcements. The user can activate DND while their phone is idle or while on a call. Once activated, incoming trunk calls still flash the line keys. The user may use the phone in the normal manner for placing and processing calls.

There are five Do Not Disturb options available at each extension:

1 = Incoming trunk calls blocked

2 = Paging, incoming Intercom, Call Forwards and transferred trunk calls blocked

3 = All calls blocked

4 = Incoming Call Forwards blocked

0 = Do Not Disturbed cancelled

Conditions

If there is no Call Forwarding key (Program 15-07: 10 - 17), the DND key will blink when the extension is forwarded.

Default Settings

Enabled for all extensions.

• Programming

11-12-01: Service Code Setup (for Service Access) - Call Forwarding/DND Override

In order to use the DND Override service code if voice mail is installed, the single digit service code (11-16-09) must be deleted or changed as it conflicts with the DND Override code.

11-16-06: Single Digit Service Code Setup - DND/Call Forward Override

If a single digit service code is to be used, assign an available code number.

20-06-01: Class of Service for Extensions

Assign a Class Of Service (1-15) to an extension.

20-13-04: Class of Service Options (Supplementary Service) - Call Forward/ DND Override

Determine whether or not an extension should be able to override DND (0=denied, 1=allowed).

• Related Features

• Call Forwarding

If an extension user activates DND option 4, the system prevents other extensions from forwarding calls to them. If an extension already receiving forwarded calls activates DND option 4, callers to the forwarded extension hear DND tone.
• **Call Forwarding/Do Not Disturb Override**
  An extension user can override Call Forwarding or Do Not Disturb at another extension.

• **Central Office Calls, Answering**
  When a call is transferred because of Call Forwarding No Answer, Call Forwarding Busy, or DND, the Reason for Transfer option can display to the transferred extension why the call is ringing to their phone.

• **Direct Inward Line (DIL)**
  DND modes 1-3 will cause calls to follow 22-08 programming even if the extension is forwarded.

• **Distinctive Ringing, Tones and Flash Patterns**
  Set up DND flash patterns for DSS and Hotline keys.

**Operation**

To activate or deactivate Do Not Disturb while your extension is idle:

**System Phone**

1. Do not lift the handset.
2. Press DND key.
   OR
   Press a SPK key and dial 847.
3. Dial the DND option code.
   0 = Cancel DND
   1 = Incoming trunk calls blocked
   2 = Paging, incoming Intercom, Call Forwards and transferred trunk calls blocked
   3 = All calls blocked
   4 = Call Forwards blocked

**Single Line Telephone**

1. Lift handset.
2. Dial 847.
3. Dial the DND option code.
   0 = Cancel DND
   1 = Incoming trunk calls blocked
   2 = Paging, incoming Intercom, Call Forwards and transferred trunk calls blocked
   3 = All calls blocked
   4 = Call Forwards blocked
Doorphone

• Description

The Doorphone is a self-contained Intercom unit typically used to monitor an entrance door. A visitor at the door can press the Doorphone call button (like a door bell). The Doorphone then sends chime tones to all extensions programmed to receive chimes. To answer the chime, the called extension user just lifts the handset. This lets the extension user talk to the visitor at the Doorphone. The Doorphone is convenient to have at a delivery entrance, for example. It is not necessary to have company personnel monitor the delivery entrance; they just answer the Doorphone chimes instead. Any number of system extensions can receive Doorphone chime tones.

Each Doorphone has a pair of normally open relay contacts that can connect to an electric door strike. Use these contacts to remotely control the entrance door. After answering the Doorphone chimes, a system phone user can press FLASH to activate the Doorphone contacts. This in turn releases the electric strike on the entrance door. The device connected to the Doorphone contacts cannot exceed the contact ratings shown in the table below:

<table>
<thead>
<tr>
<th>Doorphone Relay Contact Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contact Configuration</td>
</tr>
<tr>
<td>Maximum Load</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

The system can have up to two Doorphones.

Conditions
Refer to the system hardware manual for additional details.

Default Setting
Enabled

• Programming

10-03-01: PCB Setup - Channel 1 Terminal Type
Set the terminal type to “8” for Doorphone usage.

32-01-01: Doorphone Timers - Doorphone Answer Time
Set the interval within which a user must answer the Doorphone chimes.

32-01-02: Doorphone Timers - Door Lock Cancel Time
Set the length of time the Doorphone strike stays open when the single line user hook flashes or system phone user presses Flash.

32-02-01: Doorphone Ring Assignments
Determine which Doorphones (1-6) should ring which extensions.

32-03-01: Doorphone Basic Setup - Chime Pattern
Set the chime pattern (0-6) for each Doorphone.

32-03-02: Doorphone Basic Setup - CODEC Transmit Gain Setup
Setup 32-03-03: Doorphone Basic Setup - CODEC Receive Gain Setup
Select the CODEC gain types (1-63) for each Doorphone (1-6).

• **Related Features**
  • **Single Line Telephones, Analogue Single Line Sets**
    Doorphones can ring single line phones if allowed in programmed.

• **Operation**

  **To call a Doorphone:**

  **System Phone**
  1. Press a SPK key.
  2. Dial 802.
  3. Dial Doorphone Number (1-6).

  **Single Line Telephone**
  1. Lift handset.
  2. Dial 802.
  3. Dial Doorphone Number (1-6).

  **To activate the Doorphone strike:**

  **System Phone**
  1. While talking to the Doorphone, press the Flash key.

  **Single Line Telephone**
  1. While talking to the Doorphone, hookflash.

  **To answer a Doorphone chime:**
  1. Lift handset.
Fax Machine Compatibility

• Description

Fax Machine Compatibility lets you integrate a customer-provided fax machine into your telephone system. You have the following options:

• Transfer to Fax
  Transfer to Fax allows an extension user to Transfer their active voice call to a company fax machine. After the Transfer completes, the user’s outside caller can start their fax machine and send the fax. This would benefit a salesperson on the road, for example. The salesperson could call their secretary and give a general report - and then fax detailed figures when the conversation is over.

• Direct Inward calling to Fax
  DIL/DID provide direct routing to fax machines installed as system extensions. Use a DIL/DID for a “fax only” line for unattended sending and receiving of faxes.

Conditions
None

Default Setting
Disabled.

• Programming

Refer to Central Office Calls, Answering and Central Office Calls, Placing for trunk programming.

• Related Features

• Central OfficeCalls, Answering / Central Office Calls, Placing
  The fax machine should be programmed with incoming and outgoing access options.

• Direct Inward Line
  Use DILs to route system trunks directly to fax machines installed as extensions.

• Direct Inward Dialling
  Use DID to route calls directly to fax machines installed as extensions.

• Ring Groups
  Ring Groups can also be used to direct calls to the fax machine.

• Single Line Telephones - Analogue/Digital
  Set up incoming and outgoing access for the fax telephone line.

• Voice Response System (VRS)
  When using a VRS, set up a single digit dialling code which can be used to transfer callers to the fax machine.

• Voice Mail
  When using voice mail, you can provide the digit to be dialled to transfer the call to the analogue port which is connected to the fax machine.
• Operation

To transfer a call to the fax machine:

**System Phone**

1. Press HOLD.
   
   You hear *Transfer dial tone*.

2. Dial fax machine extension number.
   
   *If you have Automatic On Hook Transfer and the extension you call is busy, pressing CALL returns you to the call.*
   
   *If the called extension doesn’t answer, you can dial another extension number or press CALL to return to the call.*

3. Hang up.
   
   *If you don’t have Automatic On Hook Transfer, you must press the TRF Key to Transfer the call.*

**Single Line Set**

1. Hookflash.

2. Dial fax machine extension number.
   
   *If the called extension doesn’t answer, you can dial another extension number or hookflash to return to the call.*

3. Hang up.
Flash

• Description

Flash allows an extension user to access certain CO and PBX features by interrupting trunk loop current. Flash lets an extension user take full advantage of whatever features the connected telco or PBX offers. You must set the Flash parameters for compatibility with the connected telco or PBX.

Conditions
None.

Default Setting
Enabled.

• Programming

14-02-03: Analogue Trunk Data Setup – Flashing
Make sure this item is set for open loop Flash (0).

14-02-04: Analogue Trunk Data Setup - Flash for Timed Flash or Disconnect
For each trunk, indicate if Flash is for Flash (0) or open loop disconnect (1).

15-02-05: System Telephone Basic Data Setup - Transfer Key Operation Mode
If CONF (TRF) key should access Flash, enter 2. Otherwise, enter 0 or 1.

15-03-04: Single Line Telephone Basic Data Setup – Flashing
In a single line telephone’s Class of Service, enable (1) or disable (0) the ability to hookflash for system feature access.

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

81-01-14: Analogue Trunk Initial Data Setup - Hookflash 1
Set the Flash duration (16-4080mS) for analogue trunk circuits.

81-01-15: Analogue Trunk Initial Data Setup - Hookflash 2
Set the open loop disconnect duration (16-4080mS) for analogue trunk circuits.

• Related Features

• PBX Compatibility
If the system is behind a PBX, Flash normally gives the extension user access to many PBX features.

• Toll Restriction
The system applies Toll Restriction (if applicable) to the number a user dials after flashing a trunk.

• Voice Mail Integration
If Voice Mail Integration ports are to flash outside calls, change the Single Line Flash Service Code (11-12-42). Dialling “#” from voice mail ports lights the Message Waiting lamp.

• Operation

To flash the trunk you are on:

System Phone and Digital Single Line

1. Press FLASH.

Single Line Set

1. Hookflash.
2. Dial 806.
Flexible System Numbering

• Description

Flexible System Numbering lets you reassign the system’s port-to-extension assignments. This allows an employee to retain their extension number if they move to a different office. In addition, factory technicians can make comprehensive changes to your system’s number plan. You can have factory technicians:

- Set the number of digits in internal (Intercom) functions. For example, extension numbers can be up to four digits long.
- Change your system’s Service Code numbers
- Assign single digit access to selected Service Codes

Talk to your sales representative to find out if this program is available to you.

You can also use Flexible System Numbering to change the system’s Trunk Group Routing code. Although the default code of 0 is suitable for most applications, you can alter the code if you have to.

The system provides a completely flexible system numbering plan. Refer to the chart below and the Programming section for more details.

<table>
<thead>
<tr>
<th>Program</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>11-01 : System Numbering</td>
<td>Set the system’s internal (Intercom) numbering plan. The numbering plan includes the digits an extension user must dial to access features and other extensions.</td>
</tr>
<tr>
<td>11-09-01 : Trunk Access Code</td>
<td>Assign the single-digit trunk access code (normally 0). This is the code users dial to access Automatic Route Selection or Trunk Group Routing.</td>
</tr>
<tr>
<td>11-16 : Single Digit Service Code Setup</td>
<td>Assign the Single Digit Service Codes. These are the post-Dialling codes a user can dial after placing an Intercom call to a co-worker.</td>
</tr>
</tbody>
</table>

Conditions

A. Programming follows a telephone’s extension number, not the port number in most cases. If you relocate a phone, you may need to change additional programming.

B. If the extension numbering plan is changed from ‘2xx’ to ‘1xx’, and you would like to consecutively press two DSS keys without toggling the hookswitch, Program 11-16-05 must be removed. If not, pressing the second DSS key will actually change voice/ringing call to the first extension.
C. Since making changes in Program 11-01 does not automatically make any other changes in any other program, changing the number plan after the system is in operation may cause problems in the following programs:

<table>
<thead>
<tr>
<th>11-01 Type 2 (Extension Number)</th>
<th>11-01 Type 1 (Service Codes)</th>
</tr>
</thead>
<tbody>
<tr>
<td>11-02 11-04 11-06 11-07</td>
<td>11-10 11-11 11-12 11-15</td>
</tr>
<tr>
<td>11-08 15-01-01 15-07 15-12</td>
<td>15-14 21-11 30-03</td>
</tr>
<tr>
<td>15-14 21-11</td>
<td></td>
</tr>
</tbody>
</table>

D. Any feature which requires Dialling a code or extension number can be affected.

**Default Setting**

Extensions are numbered consecutively (Program 11-02 and 11-04) from: 200 (port 01) to 223 (port 24)

• **Programming**

  11-01-01: System Numbering  
  Customise the system's internal (Intercom) numbering plan.

  11-02-01: Extension Numbering  
  Assign extension numbers to extension ports. The telephone's programming identity follows the port number - not the extension number.

  11-09-01: Trunk Access Code  
  Assign the single-digit trunk access code (normally 0) for ARS/Trunk Group Routing.

  11-10-01: Service Code Setup (for System Administrator)

  11-11-01: Service Code Setup (for Setup/Entry Operation)

  11-12-01: Service Code Setup (for Service Access)  
  Customise the Service Codes.

  11-16-01: Single Digit Service Code Setup  
  Assign the Single Digit (post-dialling) Service Codes.

• **Related Features**

  None
Forced Trunk Disconnect

• Description

Forced Trunk Disconnect allows an extension user to disconnect (release) another extension’s active outside call. The user can then place a call on the released trunk. Forced Trunk Disconnect lets a user access a busy trunk in an emergency, when no other trunks are available. Maintenance technicians can also use Forced Trunk Disconnect to release a trunk on which there is no conversation. This can happen if a trunk does not properly disconnect when the outside party hangs up.

CAUTION

Forced Trunk Disconnect abruptly terminates the active call on the line. Only use this feature in an emergency and when no other lines are available.

Conditions

None

Default Setting

Disabled.

• Programming

20-06-01: Class of Service for Extensions

Assign a Class of Service (1-15) to an extension.

20-07-11: Class of Service Options (Administrator Level) - Forced Trunk Disconnect

In an extension’s Class of Service, enable (1) or disable (0) the ability to use Forced Trunk Disconnect.

• Related Features

• Central Office Calls, Placing

A user can use Forced Trunk Disconnect only for trunks to which it would normally have access.

• Operation

To disconnect a busy trunk:

System Phone

1. Press line key for trunk.
   OR
   Dial trunk access code (805 + trunk number).
   You hear busy tone. Trunk numbers are 01-51.

2. Dial 724.
   You hear confirmation beeps as the system disconnects the trunk.
   You can now place a call on the free trunk.

3. Press line key for the trunk disconnected in Step 2.
   OR
   Dial the trunk access code (805 + trunk number) for the trunk disconnected in Step 2.
**Single Line Telephone**

1. Dial trunk access code (805 + trunk number).
   
   You hear busy tone. Trunk numbers are 01-51.

2. Dial 724.
   
   You hear confirmation beeps as the system disconnects the line.

3. Hookflash.
   
   You can now place a call on the free line.

Dial the trunk access code (805 + trunk number) for the trunk disconnected in Step 2.
Group Call Pickup

• Description

Group Call Pickup allows an extension user to answer a call ringing an extension in a Pickup Group. This permits co-workers in the same work area to easily answer each other's calls. The user can intercept the ringing call by Dialling a code or pressing a programmed Group Call Pickup key. If several extensions within the group are ringing at the same time, Group Call Pickup intercepts the call based on the extension's priority within the Pickup Group.

With Group Call Pickup, a user can intercept the following types of calls:

- A call ringing another pickup group when the user knows the group number
- A call ringing another pickup group when the user doesn't know the group number
- A call ringing the user's own pickup group

Conditions

A Call Pickup Group cannot have an associated name.

Default Setting

Enabled.

• Programming

15-07-01: Programming Function Keys
Assign Group Call Pickup keys: Code 24 for an extension's own Pickup Group and ring group calls (Service Code 867) Code 25 for a phone ringing in another Pickup Group (Service Code 869) - used when the caller doesn't know the group number Code 26 (+ group) for a phone ringing in another specific Pickup Group (Service Code 868)

20-06-01: Class of Service for Extensions
Assign a Class Of Service to an extension (1-15).

20-10-01: Class of Service Options (Answer Service) - Group Call Pickup Within Group
In an extension's Class of Service, enable (1) or disable (0) an extension's ability to pick up calls ringing their pickup group (Service Code 867).

20-10-02: Class of Service Options (Answer Service) - Group Call Pickup from Another Group
In an extension's Class of Service, enable (1) or disable (0) an extension's ability to pick up calls ringing telephones that are not in their pickup group (Service Code 869)

20-10-03: Class of Service Options (Answer Service) - Group Call Pickup for Specific Group
In an extension's Class of Service, enable (1) or disable (0) an extension's ability to pick up calls ringing a specific group (Service Code 868).

20-10-04: Class of Service Options (Answer Service) - Group Call Pickup
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to use Group Call Pickup.

**20-10-05: Class of Service Options (Answer Service) - Directed Call Pickup for Own Group**
Enable (1) or disable (0) an extension’s ability to use Directed Call Pickup for calls ringing their own group.

**23-02-01: Call Pickup Groups**
Assign extensions to Pickup Groups. Also, use this option to assign an extension’s priority within a Pickup Group (Call Pickup Groups 1-9 or 01-32, Priority Number 1-999).

### Related Features
- **Central Office Calls, Answering**
  Users can pickup of calls regardless of their access map programming.
- **Directed Call Pickup**
  Directed Call Pickup provides another way of answering a co-worker’s call.
- **Hold / Park**
  Group Call Pickup can not be used to answer calls recalling from Hold or Park.
- **Multiple Directory Numbers / Call Coverage**
  Group Call Pickup keys can not be used to answer calls ringing Multiple Directory Number or Call Coverage keys.
- **Programmable Function Keys**
  Function keys simplify Group Call Pickup operation.

### Operation

**To answer a call ringing another phone in your Pickup Group:**

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. (System Phone only) Press Group Call Pickup key (PGM 15-07 or SC 851: 24).
   OR
   Dial 856 or 867.

   *Service Code 867 can pick up any call in the group, plus any Ring Group calls. Service Code 856 cannot pick up Ring Group calls.*

**To answer a call ringing a phone in another Pickup Group when you don’t know the group number:**

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. (System Phone only) Press Group Call Pickup key (PGM 15-07 or SC 851: 25).
   OR
   Dial 869.
To answer a call ringing a phone in another Pickup Group when you know the group number:

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. (System Phone only)
   Press Group Call Pickup key (PGM 15-07 or SC 851: 26 + group).
   OR
   Dial 868 and the group number (1-9 or 01-32).
Handsfree and Monitor

• Description

Handsfree allows a system phone user to process calls using the speaker and microphone in the telephone (instead of the handset). Handsfree is a convenience for workers who don’t have a free hand to pick up the handset. For example, a terminal operator could continue to enter data with both hands while talking on the phone.

The system provides three variations of Handsfree operation:

<table>
<thead>
<tr>
<th>Handsfree</th>
<th>User can place and answer calls by pressing SPK instead of using the handset.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Automatic Handsfree</strong></td>
<td>User can press a line or line appearance key without first lifting the handset or pressing SPK. An extension can have Automatic Handsfree for just outgoing calls or both outgoing calls and incoming line/loop key calls. Automatic Handsfree can also be used with the Call Coverage or Park features. Normally, extensions without speakerphones should have Automatic Handsfree for outgoing calls only.</td>
</tr>
<tr>
<td>Monitor</td>
<td>User can place a call without lifting the handset, but must lift the handset to speak.</td>
</tr>
</tbody>
</table>

Conditions

A. Keysets are half-duplex which may cause the speaker to turn off (clip) during conversations, giving preference to the outside party.
B. Handsfree operation during outside trunk calls is only supported by display-type system phones.

Default Setting

Enabled.

• Programming

20-06-01: Class of Service for Extensions
Assign Class of Service (1-15) to extensions.

• Related Features

• Central Office Calls, Answering / Central Office Calls, Placing
  Extensions should be programmed for incoming and outgoing access, ringing, etc.

• Handsfree Answerback
  Answer Intercom calls without lifting the handset - just speak toward the phone.

• Microphone Mute
  For privacy, mute the phones microphone while on a call.

• Single Line Telephones
  Automatic Handsfree and Monitor are not available to single line telephones.

• Prime Line Selection
  Prime Line Selection affects how incoming and outgoing calls are handled and thus determines what happens when the user presses the SPK key.
• Operation

To talk Handsfree:
  1. Press SPK, CALL key or line key.
  2. Place call.
  3. Speak toward phone when called party answers.

To change a handset call into a Handsfree call:
  1. Press SPK.
  2. Press SPK to hang up.

To change a Handsfree call into a handset call:
  1. Lift handset.
Handsfree Answerback/Forced Intercom Ringing

• Description

Handsfree Answerback permits an system phone user to respond to a voice-announced Intercom call by speaking toward the phone, without lifting the handset. Like Handsfree, this is a convenience for workers who don’t have a free hand to pick up the handset.

Conditions

Handsfree Answerback is not available at an analogue single line telephone.

Default Setting

Enabled.

• Programming

20-02-12: System Options for System Telephones - Forced Intercom Ringing
Enable (1) or disable (0) Forced Intercom Ringing. If disabled (0), Intercom calls voice-announce.

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-08-10: Class of Service Options (Outgoing Call Service) - Switching from Handsfree
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to toggle between Handsfree Answerback and Forced Intercom Ringing for outgoing Intercom calls (dial 1 or Service Code 812).

20-09-05: Class of Service Options (Incoming Call Service) Setting Handsfree answerback/Forced Intercom Ringing
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to set Handsfree Answerback (Service Code 821) and Forced Intercom Ringing (Service Code 823) for incoming Intercom calls.

• Related Features

• Handsfree and Monitor
A system phone user can process calls using the speaker and microphone in the telephone (instead of the handset).

• Microphone Mute
With Microphone Mute enabled, Handsfree Answerback callers to an extension hear a single beep (instead of two).

• Single Line Telephones
Incoming Intercom calls always ring single line telephones.

• Operation

To enable Handsfree Answerback for your incoming Intercom calls:
1. Press a SPK key.
2. Dial 821.
3. Press SPK to hang up.
To enable Forced Intercom Ringing for your incoming Intercom calls:

1. Press a SPK key.
2. Dial 823.
3. Press SPK to hang up.

This disables Handsfree Answerback.

To change the way your Intercom call signals the extension you are calling:

1. Dial 1.

If ringing, your call voice-announces. If voice-announced, your call starts to ring the destination. This option is also available at single line telephones.
Headset Operation

• Description
A system phone user can utilize a customer-provided headset in place of the handset. Like using Handsfree, using the headset frees up the user’s hands for other work. However, Headset Operation provides privacy not available from Handsfree.

An extension in the headset mode has two options for when it appears busy to incoming callers.

The headset extension can be:
• Busy to incoming callers when only one extension appearance is busy (i.e., Off-Hook Signalling prevented)
  OR
• Busy to incoming callers only when both extension appearances are busy (i.e., Off Hook Signalling allowed)

Conditions
A. While in the headset mode, the Headset function key becomes a release (disconnect) key and no dial tone is heard from the speaker.
B. While in the headset mode, the hook switch is not functional.
C. Only compatible headsets should be used.
   Plantronics S12 (Adapter and headset)
   Plantronics M12E Vista Base with any H-series headset
   Technical note: the Topaz handset has a dynamic microphone (as opposed to an Electret type) ensure the headset you connect is compatible with this type of microphone.

Default Setting
Disabled.

• Programming
11-11-43: Service Code Setup (for Setup/Entry Operation) – Headset Mode Switching
Assign a service code for Headset Ringing Mode Switching (default: 788)

15-07-01: Programming Function Keys
Assign a function key for Headset operation (code 05).

20-02-05: System Options for System Telephones - Headset Busy Mode
Set the conditions under which a headset extension is busy to incoming callers:
   The Headset extension is busy to incoming callers when only one extension appearance is busy (0).
   OR
   Headset extension is busy to incoming callers only when both extension appearances are busy (1).

20-02-12: System Options for Multi-Line Telephones - Forced Intercom Ringing
Determine whether intercom calls should ring or voice-announce extensions (0=voice, 1=ring).

20-02-14: System Options Key Telephones
Headset Ringing Cancel Timer 0-64800(sec.) 30

20-03-06: System Options for Single Line Telephone – Headset Ringing Start Time (for SLT)
Define the Headset ringing start time. After this timer expires from the time when a SLT is off hook, the system will set the SLT to headset ringing mode (Default: 5 seconds, Entries: 0-64800).

21-13-38: Class of Service Options (Supplementary Service) – Headset Ringing
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to use the Headset ringing (Default: 0 [disabled]).

30-03-01: DSS Console Key Assignment
When using a DSS Console, assign a function key for Headset operation (code 05).

• Related Features

  • Handsfree Answerback/Forced Intercom Ringing
    An extension with a headset can still receive voice-announced Intercom calls and respond Handsfree.

  • Programmable Function Keys
    A Headset Function key is required to answer or place a call in headset mode.

  • Single Line Telephones
    Single line telephones cannot use the Headset feature.

• Operation

To enable the headset:

1. Program a Headset key (PGM 15-07 or SC 851: 05).
   You hear a confirmation beep.

To use the headset:

The Headset key lights when you’re on a call. To disconnect, press the Headset key again.
The headset only activates when the Headset key is pressed.

Answer a ringing call by pressing the Headset key.
   OR

Press the Headset key and then a line key to make a trunk call.
   OR

Press the Headset key to get Intercom dial tone.
   OR

If on a call, press the Headset key to hang up.
Hold

• Description

Hold lets an extension user put a call in a temporary waiting state. The caller on Hold hears silence or Music on Hold, not conversation in the extension user’s work area. While the call waits on Hold, the extension user may process calls or use a system feature. Calls left on Hold too long recall the extension that placed them on Hold. There are four types of Hold:

- System Hold
  An outside call a user places on Hold flashes the line key (if programmed) at all other System Phones. Any system phone user with the flashing line key can pick up the call.

- Exclusive Hold
  When a user places a call on Exclusive Hold, only that user can pick up the call from Hold. The trunk appears busy to all other System Phones that have a key for the trunk. Exclusive hold is important if a user doesn’t want a co-worker picking up their call on Hold.

- Group Hold
  If a user places a call on Group Hold, another user in the Department Group can dial a code to pick up the call. This lets members of a department easily pick up each other's calls.

- Intercom Hold
  A user can place an Intercom call on Hold. The Intercom call on Hold does not indicate at any other extension.

Hold Recall to Operator

- Hold Recall to Operator enhances how the system handles calls that have been left on hold too long. With Hold Recall to Operator:
  - A trunk call recalls the extension that placed it on Hold after the Hold/Exclusive Hold Recall time.
  - The recalling trunk will ring the extension that placed it on Hold for the Hold/Exclusive Hold Recall Callback Time.
  - After the Hold/Exclusive Hold Recall Callback Time, the trunk call will ring the operator.

Hold Recall to Operator applies to trunk calls placed on System Hold, Exclusive Hold and Group Hold. It does not apply to Intercom calls.

Conditions

The called extension must lift the handset or press the SPK key before the call can be placed on hold.

Default Setting

Enabled.

• Programming

14-01-16: Basic Trunk Data Setup - Forced Release of Held Call
   Enable (1) or disable (0) Forced Release of Held Call.

14-07-01: Trunk Access Map Setup
Set up the Trunk Access Maps (1-51). This sets the access options for trunks on Hold.

15-02-06: System Telephone Basic Data Setup - Hold Key Operating Mode
Set the function of the extension’s HOLD key: System (0), Exclusive (1), or Park (2) Hold.

15-02-07: System Telephone Basic Data Setup - Automatic Hold for CO Line
Determine whether an extension will use Automatic Hold for CO calls (0) or if the call should disconnect (1).

15-06-01: Trunk Access Map for Extensions
Assign Trunk Access Maps (1-51) to extensions.

15-07-01: Programming Function Keys
Assign a function key for Exclusive Hold (code 45). If an extension has its fixed Hold key reassigned (in Program 15-02-06), assign a function key for System Hold (code 44).

16-02-01: Department Group Assignment for Extensions
Assign extensions to Department Groups (1-32).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-11-09: Class of Service Options (Hold/Transfer Service) - Group Hold Initiate
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to initiate Group Hold (Service Code 832).

20-11-10: Class of Service Options (Hold/Transfer Service) - Group Hold Answer
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to pick up a call placed on Group Hold (Service Code 862).

20-11-13: Class of Service Options (Hold/Transfer Service) - Hold Recall to Operator
Enable (1) or disable (0) Hold Recall to Operator. If enabled, a call recalling an extension longer than the Hold/Exclusive Hold Recall Callback Time will recall the operator (normally 200). If disabled, the call will continually recall the extension that placed it on Hold.

20-17-01: Operator’s Extension
Assign an operator’s extension number if Hold Recall to Operator will be used.

24-01-01: System Options for Hold - Hold Recall Time
Set the Hold Recall Time (0-64800 seconds). A call on Hold recalls the extension that placed it on Hold after this interval.

24-01-02: System Options for Hold - Hold Recall Callback Time
Set the Hold Recall Callback Time (0-64800 seconds). A trunk recalling from Hold rings an extension for this interval.

24-01-03: System Options for Hold - Exclusive Hold Recall Time
Set the Exclusive Hold Recall Time (0-64800 seconds). A call on Exclusive Hold recalls the extension that placed it on Hold after this interval.
24-01-04: System Options for Hold - Exclusive Hold Recall Callback Time
Set the Hold Recall Time (0-64800 seconds). A trunk recalling from Hold rings an extension for this interval. If still unanswered, the call changes to System Hold.

24-01-05: System Options for Hold - Forced Release of Held Calls Interval
Set the Forced Release of Held Calls interval (0-64800 seconds). If enabled in Program 14-01-16, the system disconnects a call if on Hold longer than this interval.

• Related Features
  • Music on Hold
    Callers on Hold hear Music on Hold, if programmed.
  • Programmable Function Keys
    An extension can have function keys for System Hold and Exclusive Hold.
  • Single Line Telephones
    Analogue single line telephones can only use Exclusive Hold and Group Hold. Digital single line phones can use System Hold as well.

• Operation

System Hold
To place an outside call on System Hold (System Phone only):
1. Press HOLD.
   A line/loop/CALL key flashes slowly while on Hold; flashes fast when recalling.
   OR
1. If you know the specific line number, dial 772 + Line number (01-51).

To pick up an outside call on System Hold:
   System Phone
1. Press flashing line/loop/CALL key.
   OR
1. If you know the specific line number, dial 772 + Line number (01-51).

Exclusive Hold
To place an outside call on Exclusive Hold:
   System Phone
1. Press Exclusive Hold key (PGM 15-07 or SC 851: 45).
   A line/loop/CALL key flashes slowly while on Hold, flashes fast when recalling.

To pick up an outside call on Exclusive Hold:
   System Phone
1. Press flashing line/loop/CALL key.

Group Hold
To place a call on Hold so anyone in your extension group can pick it up:
   System Phone
1. Press HOLD.
2. Dial 832.
3. Press SPK to hang up.

**Single Line Telephone**
1. Hookflash.
2. Dial 832.
3. Hang up.

**To pick up a call on Group Hold:**

**System Phone**
1. Press a SPK key.
2. Dial 862.

**Single Line Telephone**
1. Lift handset.
2. Dial 862.

**Intercom Hold**

**To place an Intercom call on Intercom Hold:**
1. Press HOLD.
   *The CONF/DND key flashes.*
2. Press SPK to hang up.

**To pick up an Intercom call on Intercom Hold:**
1. Press SPK.
   OR
   Press flashing CONF/DND key.
Hotline

• Description

Hotline gives a system phone user one-button calling and Transfer to another extension (the Hotline partner). Hotline helps co-workers that work closely together. The Hotline partners can call or Transfer calls to each other just by pressing a single key.

In addition, the Hotline key shows the status of the partner’s extension

<table>
<thead>
<tr>
<th>When the key is...</th>
<th>The extension is ...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>idle</td>
</tr>
<tr>
<td>On</td>
<td>Busy or ringing</td>
</tr>
<tr>
<td>Fast Flash</td>
<td>DND – All calls (option 3) or Intercom calls (option 2)</td>
</tr>
</tbody>
</table>

Conditions

An extension user cannot use Hotline to pick up a call ringing their partner’s extension.

Default Setting

Disabled.

• Programming

15-07-01: Programming Function Keys

Assign a function key for Hotline (code 01 + partner’s extension number).

20-06-01: Class of Service for Extensions

Assign a Class of Service to an extension (1-15).

• Related Features

• Distinctive Ringing, Tones and Flash Patterns
  Set up flash patterns for DSS and Hotline keys.

• Do Not Disturb
  Hotline does not override Do Not Disturb.

• Handsfree Answerback/Forced Intercom Ringing
  Hotline always follows the Handsfree Answerback/Forced Intercom Ringing mode set at the called extension. The Hotline caller can override the setting, if desired.

• Hotline, External
  External Hotline will automatically dial a telephone number or Common Abbreviated dialling number when the handset is lifted.

• Off Hook Signalling
  If the partner’s extension is busy, Hotline does not automatically activate Off Hook Signalling.

• Programmable Function Keys
  A Hotline is a uniquely programmed function key.
• Operation

To place a call to your Hotline partner:

1. Press Hotline key (PGM 15-07 or SC 851: 01 + partner’s extension number)
   
   You can optionally lift handset after this step for privacy.

To transfer your outside call to your Hotline partner:

1. 1. Press Hotline key.
2. 2. Announce call and hang up.

   OR
   
   Hang up to have the call wait at your Hotline partner unannounced.

   If unanswered, the call recalls like a regular transferred call.

To answer a call from your Hotline partner:

1. If you hear two beeps, speak toward phone.
2. OR
   
   If your telephone rings, lift handset.
Intercom

• Description
Intercom gives extension users access to other extensions. This provides the system with complete internal calling capability.

Handsfree Answerback/Forced Intercom Ringing
Handsfree Answerback permits an extension user to respond to a voice-announced Intercom call by speaking toward the phone, without lifting the handset. Like Handsfree, this is a convenience for workers who don’t have a free hand to pick up the handset. Refer to Handsfree Answerback/Forced Intercom Ringing for more.

Conditions
Preventing ICM calls does not affect Dialling other service codes, including Emergency calls.

Default Setting
Enabled.

• Programming
For Intercom . . .

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-08-01: Class of Service Options (Outgoing Call Service) - Intercom Calls
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to place Intercom calls.

20-17-01: Operator’s Extension
Assign the operator’s extension.

20-18-01: Service Tone Timer - Extension Dial Tone Time
Set the Extension Dial Tone Time (0-64800 seconds). After getting Intercom dial tone, a system phone user has this interval to dial the first digit of the Intercom call.

21-01-02: System Options for Outgoing Calls - Intercom Interdigit Time
Set the Intercom Interdigit Time (0-64800 seconds). When placing Intercom calls, users must dial each digit within this interval.

For Handsfree Answerback/Forced Intercom Ringing . . .

20-02-12: System Options for System Telephones - Forced Intercom Ringing
Enable (1) or disable (0) Forced Intercom Ringing. If disabled (0), Intercom calls voice-announce.

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-08-10: Class of Service Options (Outgoing Call Service) - Switching from Handsfree
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to toggle between Handsfree Answerback and Forced Intercom Ringing for outgoing Intercom calls (dialed 1 or Service Code 812).

**20-09-05: Class of Service Options (Incoming Call Service) - Setting Handsfree**

**Answerback/Forced Intercom Ringing**

In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to set Handsfree Answerback (Service Code 821) and Forced Intercom Ringing (Service Code 823) for incoming Intercom calls.

**• Related Features**

- **Handsfree Answerback/Forced Intercom Ringing**
  Intercom calls can ring or be voice-announced at the called extension.

- **Intercom Abandoned Call Display**
  Intercom Abandoned Call Display remembers the last five Intercom calls to an extension.

- **Line Preference**
  Ringing Line Preference can automatically answer ringing Intercom or trunk calls when the user lifts the handset.

- **Name Storing**
  An extension can have a name assigned that identifies the extension to callers.

**• Operation**

**To place an Intercom call:**

1. Press **SPK** key (or lift handset).
2. Dial extension number (or 9 for your operator).
3. Dial 1 to toggle between a Signalling (Ringing) Call and a Voice Call.

*If the extension you call is busy or doesn’t answer, you can dial another extension number or dial 2 to step to the next extension without hanging up.*

**To answer an Intercom call:**

1. If you hear two beeps (Voice Call), speak toward phone handsfree.
   - OR -
   If your telephone rings (Signalling Call), lift handset or press **SPK**.

**To check your extension information:**

*System Phone*

1. Press **CHECK**.
2. Press **CALL**.
   *Your display shows your telephone’s extension number, port number and Department Group.*
3. Press **CLEAR** to return the normal time/date display.

**To change how Intercom calls ring at your extension:**

1. Press the **CALL** key.
2. Dial 823 to have intercom calls ring at your extension (Signalling).
-OR-

3. Dial 821 to have intercom calls voice announce to your extension (Voice).
ISDN Compatibility

• Description

ISDN-BRI (Integrated Service Digital Network - Basic Rate Interface) is a telephone network service that provides two B-channels (2B+D) for voice call trunking. The B-channels are used to provide two CO/PBX type connections. Caller ID is a standard feature on ISDN-BRI provided trunks. Caller ID indication displays the calling party telephone number on the LCD of the Multiline Terminal for CO incoming calls. This interface provides voice communication path only.

Basic Rate Interface (BRI)
Your system also provides compatibility with ISDN Basic Rate (BRI) services, including:

- Basic BRI Call Control (BCC) for 2 or 4 interfaces
- 2 x 64kbps Clear B-Channel and 16kbps D-Channel (2B+D)
- Point-to-Point BRI Terminal Connection (no daisy-chaining)
- Multipoint BRI Terminal Connection (daisy-chaining)
- S-Bus (allows BRI PCB's to be used as either a trunk or station interface)

BRI services require the installation of BRI Interface PCBs (2BRIU or 4BRIU). Each 2BRIU Interface PCB has two BRI circuits, while the 4BRIU Interface PCB has four BRI circuits. The BRI Interface PCBs install into the slots of the 2OPBOX unit.

SMDR Includes Dialled Number
The SMDR report can optionally print the trunk’s name (entered in system programming) or the number the incoming caller dialled (i.e., the ISDN DDI digits). This gives you the option of analysing the SMDR report based on the number your callers dial. When using the SMDR reports for ISDN, all incoming BRI calls will be displayed under the CLASS column as “IVIN”.

Display Shows Why Caller ID is Not Available
With Caller ID enabled, the system will provide information for ISDN calls that do not contain the Caller ID information. If the Caller ID information is restricted, the telephone display will show “PRIVATE”. If the system is not able to provide Caller ID information because the telco information is not available, then the display will show “OUT OF AREA”.

Calling Party Number Notification
The system can provide calling party number notification for outgoing ISDN calls. When a call is made on an ISDN line by an extension, the system will send the identification for the extension placing the call, if it’s programmed. If there is no Extension Calling Number assigned, the system will send the calling number for the ISDN trunk. If both the extension and trunk information is programmed, the extension information will be sent as it takes priority. When the option for calling party sub-address is on, the extension number will be sent as the sub-address information. Both the calling party number and calling party sub-address are sent in a SETUP message as the calling party information element and a calling party sub-address information element.
Conditions
A. When Program 10-03-03 is changed between Point-Multipoint and Point-Point, the Topaz system must be reset (switch off then on again) before the service will operate.

Default Setting
Connection Type = Point-Multipoint.

• Programming

10-03 : System Configuration Setup – PCB Setup (BRIU)
Setup the Basic Configuration data for the BRI ISDN card, as follows:
10-03-01 : ISDN Line Mode (T-Point, S-Point, S-Point Leased Line).
10-03-02 : Logical Port Number.
10-03-03 : Connection Type (Point-Multipoint, Point-Point).
10-03-04 : Layer 3 Timer Type (1-5).
10-03-05 : CLIP Information Announcement (Disable, Enable).
Based on this setting, the system will include a “Presentation Allowed” (1) or “Presentation Restricted” (0) in the Setup message to allow or deny the Calling Party Number. Program 15-01-04 must also be set to a ‘1’ if this option is enabled.
10-03-06 : S-Point Connection Mode (Extended Passive Bus, Short Passive Bus).
10-03-07 : S-point DID digits (0-4).
10-03-08 : Dial Sending Mode (Enbloc sending, Overlap sending).
10-03-09 : Dial Information Element (Overlap Sending Mode) (Keypad Facility, Called Party Number).
If Overlap Sending is selected in Program 10-03-08, select either Keypad Facility (0) or Called Party Number (1) for the dial information element.
10-03-14 : S-Point Service Protocol (Keypad facility, Special Protocol for Topaz system).

10-06 : System Configuration Setup – ISDN BRI Setup
Specify the TEI selection and DID mode for DID callers when the BRI feature is used.
10-06-01 : TEI selection (Select by SPID number, Select by Channel ID Number).
10-06-02 : DID mode (Route by Called Party Number, Route by Redirecting Number).
10-06-03 : SPID1 (Up to 20 digits).
10-06-04 : SPID2 (Up to 20 digits).

15-01-04 : Basic Extension Data Setup – Calling Party Number Notification (ISDN Caller ID)
If both Program 15-01-04 and 10-03-05 are enabled (1), the system includes Caller ID in the Setup message as “Presentation Allowed”. If these options are disabled (0), it will be “Presentation Restricted”.

15-07-01 : Programmable Function Keys
Assign a Programmable Function Key for Caller ID Block for ISDN (Function Number 63), if required, to restrict the sending of Caller ID on outgoing calls.

20-06-01 : Class of Service for Extensions
Assign a Class of Service (1-15) to an extension.

20-13-23 : Class of Service Options (Supplementary Service) - Display the Reason for Transfer
Enable (1) or disable (0) an extension’s ability to display the reason (Call Forward, Busy, No Answer or DND) a VRS, DID, DISA, or ISDN call is being transferred to their extension.

20-08-13 : Class of Service Options (Outgoing Call Service) - ISDN CLIP
Determine if the ISDN calling line identity presentation and screening indicators are to be allowed (0=disabled, 1=enabled).

20-25 : System Option Setup – ISDN Options
Define the ISDN system options for the BRI ISDN card, as follows:
- 20-25-01 : Send Release Message After Subscriber Hang Up
- 20-25-02 : Progress Indicate Information element detect
- 20-25-03 : Bearer Capability select from SLT Outgoing (3.1kHz Audio, Speech)
- 20-25-04 : Send DT Until User Dials the First Digit (Overlap Sending Mode)
- 20-25-05 : T305 Timer Start After Sending Disconnect Message
- 20-25-06 : Call Proceeding Send Mode
- 20-25-07 : Busy Tone Mode Set When Disconnect Message Received
- 20-25-08 : Use of Low Layer Compatibility (LLC)
- 20-25-09 : Use of High Layer Compatibility (HLC) Sending
- 20-25-10 : S-Point Terminal Seizes Analogue Trunk
- 20-25-11 : Automatic Changing System Clock When Date/Time Information Element Received
- 20-25-12 : Forwarded Incoming Calls Return Connect Message when Outgoing Call Receives Alert Message
- 20-25-13 : Use busy tone when trunk call receives Release Message

21-08-04 : Time for Send Busy Tone for ISDN Trunk
Set the timer to send out Busy Tone on an ISDN line, when the called party is busy (0-64800sec).

21-12 : Outgoing Call Setup – ISDN Calling Party Number Setup for Trunks
Assign Calling Party Numbers for each trunk (maximum 16 digits per entry). When a call is made by an extension which does not have an Extension Calling Number assigned (Program 21-13), the system sends the calling number for the ISDN trunk defined in Program 21-12. Note: If the Calling Party Number is assigned in both Programs 21-12 and 21-13, the system sends the data in Program 21-13.

21-13 : Outgoing Call Setup – ISDN Calling Party Number Setup for Extensions
Assign each extension a Calling Party Number (maximum 16 digits per entry). The calling number is the subscriber number of the dial-in number. When a call is made by an extension which does not have an Extension Calling Number assigned (Program 21-12), the system sends the calling number for the ISDN trunk defined in Program 21-13. **Note:** If the Calling Party Number is assigned in both Programs 21-12 and 21-13, the system sends the data in Program 21-13.

**22-02-01: Incoming Call Trunk Setup**
Assign the incoming trunk type for each trunk. There is one item for each Night Service Mode.

**22-09 : Incoming Call Setup – DID Basic Data Setup**
For each trunk group, define the basic setting of Dial-In incoming calls for each trunk group.

- **22-09-01 :** Expected Number of Digits from Telco (1-8)
- **22-09-02 :** Received Vacant Number Operation (Disconnect, Transfer)
- **22-09-03 :** Sub-addressing Mode (Extension Number specify, DID Conversion Table)
- **22-09-04 :** DID Receiving Mode for ISDN (Enbloc Receiving, Overlap Receiving)
- **22-09-05 :** Local Code Digits (0-15)
- **22-09-06 :** Local Code (Max. 16 digits)
- **22-09-07 :** Pilot Code (1 digit, 0-9)
- **22-09-08 :** T302 Time-out Operation (Disconnect, Transfer)

**22-11-01: DID Translation Table Number Conversion**
Specify for each Translation Table entry (2000):

1. The digits received by the system (eight max.)
2. The extension the system dials after translation (24 digits max.)
3. The name that should show on the dialled extension’s display when it rings (twelve characters max.)
4. The Transfer Target - 1 and 2. If the Transfer Targets are busy or receive no answer, those calls are transferred to the final transfer destination (Program 2-10).
5. Operation mode

**Assigning an ISDN Interface as an S-Bus Extension**
In the following example, BRI Interface 1 will be assigned as an S-Bus extension. Connected to this S-Bus port may be a video conference unit, G4 fax machine or other ISDN device. Switch and Jumper settings referred to are located on the 2/4BRIU card.

**Setup:**

1. Set switch SW102 = S.
2. Set switch SW100 = ON.
3. Set both jumpers of CN102 = ON.
4. Assign Program 10-03-01 for BRI Interface 1 = S-Point.
5. If the cable length to the S-Bus device is between 200m and 500m, set Program 10-03-06 = 0. Otherwise leave at default (1).
Program 10-03-06 = 0 (Extended Passive Bus) - assigned when the distance to the last device is up to 500m. Up to 3 devices may be connected up to 50m apart.

Program 10-03-06 = 1 (Short Passive Bus) - assigned when the distance to the last device is less than 200m. Up to 6 devices may be connected.

6. Program 10-03-07 can be used to add digits to the end of the extension number to increase the size of the indial number range. If Program 10-03-07 = 0, the indial number to the S-Bus ports are the logical port extension numbers, e.g. 208 and 209. If Program 10-03-07 = 1, the indial number to the S-Bus ports will be, for example, 208X and 209X.

7. Program 10-03-14 (Service Protocol for S-point) should be left at default (0 = Keypad facility).

8. Determine the type of outgoing trunk the S-Bus device will select when it goes off-hook and dials the trunk access code (e.g. 0).

ISDN Trunks Only: Program 20-25-20 = OFF

ISDN or PSTN Trunks: Program 20-25-20 = ON

9. Incoming calls to the S-Bus device can be assigned like any other extension, e.g. intercom calls, trunk calls, direct in-dial.

Notes:

- Line Key appearance for ISDN interfaces set as S-Point is disabled.
- The ISDN interface set as S-Point will be assigned the next available extension numbers, e.g. in a basic default system, the S-Bus extension numbers will be 208 & 209.
- When the S-Bus lines are selected internal dial tone is provided. At this point all internal topaz extension numbers can be dialled or a trunk access code.
- Note that the BRI interface must be assigned as point-to-multipoint (default setting) when multiple devices are connected (Program 10-03-03 = 0).

- Related Features

  - **Caller ID**
    With Caller ID enabled, the system will provide information for ISDN calls that do not contain the Caller ID information. Outgoing calls on ISDN trunks can send extension based caller ID details with the call.

  - **Call Forward Off-Premise**
    This feature requires ISDN trunks, or loop start trunks with disconnect supervision. Off-Premise Call Forward for Doorphones can be transferred to the external party through ISDN lines only.

  - **Forced Trunk Disconnect**
    This feature only works on analogue trunk. ISDN trunks do not have the Forced Trunk Disconnect available.

  - **Station Message Detail Recording**
    SMDR records for incoming calls on ISDN trunks are tagged with IVIN.

  - **Tandem Trunking (Unsupervised Conference)**
    This feature requires ISDN trunks, or loop start trunks with disconnect supervision.

  - **Toll Restriction Dial Block**
This feature is not available for ISDN BRI S-Bus extensions.

- **Transfer**
  Transferred calls on DISA, DID, ISDN trunks, or from the VRS can display the reason a call is being transferred (Call Forward, Busy, No Answer, or DND).

- **Operation**

  Same as for analogue PSTN trunks.
Last Number Redial

• Description

Last Number Redial allows an extension user to quickly redial the last number Dialed. For example, a user may quickly recall a busy or unanswered number without manually Dialling the digits.

Last Number Redial saves in system memory the last 36 digits a user dials. The number can be any combination of digits 0-9, # and *. The system remembers the digits regardless of whether the call was answered, unanswered or busy. The system normally uses the same trunk group as for the initial call. However, the extension user can pre-select a specific trunk if desired.

Redial List
The system allows display telephones to have a Redial List. Up to 10 Dialed numbers (both external and internal destinations) are automatically stored in the Redial List. The user can display and select one of the stored numbers and then redial it. If more than 10 destination numbers are Dialed, the oldest number is automatically erased to make room for the new number.

Conditions
Redial List requires the use of a display telephone. Non-display and single line phones can not use this feature.

Default Setting
Enabled.

• Programming

11-12-12: Service Code Setup (for Service Access) - Last Number Dial
Assign a service code (816) to use Last Number Dial.

11-12-17: Service Code Setup (for Service Access) - Clear Last Number Dialing Data
Assign a service code (876) to clear the Last Number Dial.

15-02-13: System Telephone Basic Data Setup - Redial List Mode
Select the type of numbers that will be stored in the Redial List - Internal and External numbers (0) or External only (1).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

• Related Features

• Automatic Route Selection
When using Automatic Route Selection, ARS selects the trunk for the call unless the user preselects.

• Repeat Redial
The system can periodically redial an unanswered trunk call.

• Save
A user can save the number of an outgoing call to be accessed at a later time.
• **Operation**

**To redial your last call:**

1. Without lifting the handset, press LND.
   
   _The last dialled number is displayed._
2. To redial the last number, press #.
   
   OR
   
   Search for the desired number from the Redial List by pressing the LND or VOLUME 5 or VOLUME 6 keys.
3. Lift the handset or press SPK to place the call.
   
   _The system automatically selects a trunk from the same group as your original call and dials the last number dialled._
   
   OR
1. At system phone, press idle line key (optional).
   
   _The system automatically selects a trunk from the same group as your original call._
2. Press LND.
   
   OR
1. At system phone, press a CALL key.
   
   OR
   
   At single line telephone, lift handset.
2. Dial 816.
   
   _The system automatically selects a trunk from the same group as your original call and dials the last number dialled._

**To check the number saved for Last Number Redial:**

1. Press LND.
   
   _The stored number displays for six seconds. The stored number dials out if you:_
   
   - Lift the handset,
   - Press an idle line key,
   - Press a CALL key, or
   - Press SPK
2. Press HOLD.

**To erase the stored number:**

1. At system phone, press a SPK key.
   
   OR
   
   At single line telephone, lift handset.
2. Dial 876.
LCR – Least Cost Routing

• Description

Least cost routing allows the Topaz system to automatically select the indirect carrier defined by routing tables within the system.

An indirect carrier is accessed via the PSTN lines connected to the Topaz (these are the direct carrier lines), a special access code is used to select the indirect carrier, all dialled digits are passed to the indirect carrier for routing of the call to the destination.

The routing tables list the leading digits of numbers dialled by the users and the associated indirect carrier access code. It is possible to route calls to more than one indirect carrier.

Conditions

The PSTN numbers accepted by the indirect carrier may vary, consult the carrier for details.

Special attention must be given to Emergency calls (Police/Fire/Ambulance etc.), if you route emergency calls to an indirect carrier you must confirm that they will accept this type of call.

It is normal practice to have an ‘override code’ that the users can dial to route the call to a chosen carrier (direct or indirect) in the event of faults with the carrier.

F-Route/ARS operation takes place on the digits dialled by the user, before the trunk is seized. LCR will use the digits sent to line i.e. after any translation by F-Route/ARS.

Toll Restriction takes place on the digits dialled by the user. Toll restriction check will take place after any F-Route/ARS operation and before the LCR operation.

Local area calls can not be routed via an indirect carrier that also has Cost Centre Codes enabled. This is due to the order that the digits are dialled out by the Topaz. Local calls can be routed via an indirect carrier if Cost Centre Codes are not required.

Default Setting

Disabled.

• Programming

Before Least Cost Routing can take place each trunk must be enabled by Program 14-01-23.

Calls made via a trunk that is disabled will route to the direct carrier only.

14-01-23 : LCR Service

Set this item to 1 to enable least cost routing.

The operation of dialled numbers beginning with a digit 1 can changed by Program 26-01-04.
**26-01-04 : LCR Mode Option**  
Set to UK operation - numbers beginning with digit 1 will use Program 26-08-01 for manual override operation.

Set to Not UK operation - numbers beginning with digit 1 will use Program 26-02-01 i.e. not use manual override operation. Use this setting for typical Australian applications.

Outgoing calls via an LCR enabled trunk will check each dialled digit against the entries of Program 26-02-01.

If the digits dialled do not match an entry the call will use the default carrier set by 26-05 Carrier table 1.

**26-02-01 : Digit analyse Table**  
Enter the dialling code (normally just the STD code e.g. 01509), do not enter any trunk access digits (e.g. 901509).

There are 200 entries available, each entry can have up to 16 digits.

A wildcard can be entered. A wildcard means any dialled digit. Enter @ for a wildcard (press function key 01 during KeyTel Programming for a wildcard)

For each entry you must specify the carrier table to use by Program 26-02-06, the carrier table is 1-25 and is set by Program 26-05.

**26-02-06 : LCR Carrier Table**  
Enter the carrier table to use.

*Note.*

*There are no settings required in Program 26-02-02, 26-02-03, 26-02-04, 26-02-05, 26-03 & 26-04. These are used by ARS operation. Therefore you must ensure that ARS is disabled in Program 26-01-01 otherwise Program 26-02-02, 26-02-03, 26-02-04, 26-02-05, 26-03 & 26-04 will be enabled.*

In the LCR carrier table you can specify:

**26-05-01 : Delete Digits**  
Delete leading digits - This is used to delete an override code dialled by the user. Specify the quantity of leading digits to be deleted.

**26-05-02 : Access Code**  
Access Code - The access code of the indirect carrier. This is specified by the indirect carrier.

The access code can be up to 16 digits in length, it is possible to enter Pause (P) and Change to DTMF (@). A pause is entered with function key 01 and change to DTMF with function key 02 during KeyTel programming. Refer to Change to DTMF Operation for further details.

**26-05-03 : Authorisation table number**  
Authorisation code table - An optional PIN code. There are 10 entries available, they are specified in Program 26-06.
26-05-04: Cost Centre Code
Cost Centre Code - An optional code to identify the extension making the call for billing. The cost centre code is specified for each extension by Program 26-07.

If an Authorisation Code is required it is selected from Program 26-06. The authorisation code is used to identify the customer for billing. You must confirm the authorisation code with the indirect carrier otherwise all calls via the indirect carrier will fail.

26-06-01: Authorisation Code Table
There are 10 entries available each of up to 10 digits in length.

If a Cost Centre Code is required it is set by Program 26-07. The CCC is used to identify the user for billing. You must confirm the number of digits required by the indirect carrier.

26-07-01: Cost Centre Codes
There is an entry for each extension installed on the Topaz system. Each entry can be up to 6 digits in length.

You must ensure that every extension has a valid cost centre code otherwise calls will fail from extensions that do not have a valid CCC.

If the customer wants an override code to bypass the LCR routing it is entered using Program 26-08. For UK operation the override code must begin with a digit 1, refer to Program 26-01-04 for LCR operation mode.

26-08-01: Manual Override Access Code Table
There 10 entries each of up to 4 digits in length.

If you have entered any Manual Override codes in Program 26-08 you also have the option to prevent Emergency calls being made to an indirect carrier that cannot accept this type of call.

*This table is only required if you have entered an override code that will route to an indirect carrier that cannot accept Emergency calls.*

26-09-01: Manual Override Exemption Table
There are 25 tables each of up to 4 digits in length. There are default entries of 000 for Australian operation.

Change to DTMF Operation

In Program 26-05-02 the @ symbol will have different operation for Analogue trunks or ISDN trunks.

**Analogue Trunks**

At the point in the dialled digits where the @ appears the Topaz will revert to DTMF dialling. This is only required when the analogue trunk is set the Loop Disconnect dialling in Program 14-02-01.
ISDN Trunks

At the point in the dialled digits where the @ appears the Topaz will stop dialling and wait for the CONNECT from the indirect carrier. The Topaz will then continue to dial DTMF in the B-channel. The DTMF digits will be received by the indirect carrier for routing.

This is only required for indirect carriers that have a two stage setup process where the Access code is dialled in the D-channel to the direct carrier and all other digits are dialled as DTMF in the B-channel to the indirect carrier.

Order of LCR Routing Digits
When a user dials a number that is routed by LCR the individual LCR elements will be dialled to line as shown below.

<Access Code> <Authorisation Code> <CCC> <Delete leading digits> <Dialled digits>

14-01-23: LCR Service
Set the LCR Mode per trunk (0 : LCR Off, 1 : LCR On, 2 : LCR On - Cost Centre Code only).

26-01-04: Automatic Route Selection Service - LCR Mode
Use this option to define the operation of dialled numbers beginning with digit 1.
UK Mode – LCR Manual Override Access Code Tables (Program 26-08-xx) are followed.
Not UK Mode – ARS Dial Analysis Tables (Program 26-02-xx) are followed.

26-02-01: Dial Analysis Table for ARS – Dial
Enter the digits (16 digits maximum: 1-9, 0 * #, @; 200 separate entries) for the Dial Analysis Table which will be analysed by ARS/LCR. This table will be checked after any programmed F-Route operations have completed. The system will then refer to Program 26-02-02 and 26-02-03 to determine the routing for the call. To enter a wild card/don’t care digit, press Line Key 1 to enter an @ symbol. It is important to remember that the system checks the table numbers in numerical order. This means that entries for specific numbers should be entered first (such as your local area codes), then enter the items containing wild card digits. If the system sees an entry of “2@” then any table entries which follow will be ignored. For example, if 268, 269, and 270 are local exchanges, these would be the first three table entries which would route according to the settings made in Program 26-02-02 and 26-02-03 for each of the table entries. If the next entry is “2@”, then the system checks no further in this program and routes all other “2xx” numbers according to the entries made in Program 26-02-02 and 26-02-03 for this table entry.

26-02-06: Dial Analysis Table for ARS - LCR Carrier Table
For each Dial Analysis Table (1-200), set the LCR Carrier Table (0-25) to be used.

26-05-01: LCR Carrier Table - Delete Digits
26-05 defines the LCR Access Codes and routing options, including Authorization codes and Cost Centre Codes. Enter here the quantity of leading digits that need to be deleted.

26-05-02: LCR Carrier Table - Access Code
Enter the Access Code and Option to route to the Indirect Carrier.

26-05-03: LCR Carrier Table - Authorization Code Table
Enter the table number (0-10) that contains the correct Authorization code.

26-05-04: LCR Carrier Table - Cost Centre Code
Specify whether an optional cost centre code can be entered.

26-06-01: LCR Authorization Code Table
Define the optional Authorization code (or PIN code) required by the Indirect Carrier. The Authorization code is inserted if set in Program 26-05-03.

26-07-01: LCR Cost Centre Code Table
Define the optional cost centre code required by the Indirect Carrier. The cost centre code is set for each extension. The cost centre code is inserted if set in Program 26-05-04, or if “Cost Centre Code Only” is assigned in Program 14-01-23.

This code is dialled by the user to bypass the automatic selection.

26-08-02: LCR Manual Override Access Code - Carrier Table No.
Specify the carrier table number (0-25) defined in 26-05.

26-09-01: LCR Manual Override Exemption Table
Define the numbers that must not be sent via an indirect carrier when the user dials a Manual Override Access Code. The exemptions are normally Emergency Services that may not be supported by the indirect carrier.

• Related Features
  • Cost Centre Codes
    Send a cost center code for outgoing calls.
  • Automatic Route Selection (F-Route)
    ARS and F-Route Determine the appropriate trunk routing based on the digits dialled.

• Operation
Feature is automatic once programmed
Line Preference

• Description

Line Preference determines how a system phone user places and answers calls. There are two types of Line Preference: Incoming Line Preference and Outgoing Line Preference.

Incoming Line Preference

Incoming Line Preference establishes how a system phone user answers calls. When a call rings the system phone, lifting the handset answers either the ringing call (for Ringing Line Preference) or seizes an idle line (for Idle Line Preference). The idle line can provide either Intercom or trunk dial tone (see Outgoing Line Preference below). Ringing Line Preference helps users whose primary function is to answer calls (such as a receptionist). Idle Line Preference is an aid to users whose primary function is to place calls (such as a telemarketer).

Outgoing Line Preference

Outgoing Line Preference sets how a system phone user places calls. If a system phone has Outgoing Intercom Line Preference, the user hears Intercom dial tone when they lift the handset. If a system phone has Outgoing Trunk Line Preference, the user hears trunk dial tone when they lift the handset. Outgoing Line Preference also determines what happens at extensions with Idle Line Preference. The user hears either trunk (“dial 0”) or Intercom dial tone.

Auto-Answer of Non-Ringing Lines

With Auto-Answer of Non-Ringing Lines, an extension user can automatically answer trunk calls that ring other extensions (not their own). This would help a user that has to answer calls for co-workers that are away from their desks. When the user lifts the handset, they automatically answer the ringing calls based on Trunk Group Routing programming. The extension user’s own ringing calls, however, always have priority over calls ringing other co-worker’s extensions.

Conditions

If a system phone extension has more than one call ringing its line keys, Ringing Line Preference answers the calls on a first-in first-answered basis.

Default Setting

Enabled.

• Programming

14-05-01: Trunk Groups

For Auto-Answer of Non-Ringing Lines, assign trunks to trunk groups. This is part of Trunk Group Routing programming.

14-06-01: Trunk Group Routing

For Auto Answer of Non-Ringing Lines, program the Trunk Group Routing table. Auto Answer uses this table to determine the answer sequence for ringing calls.

14-07-01: Trunk Access Map Setup
For Outgoing Line Preference and Auto-Answer of Non-Ringing Lines, set up the Trunk Access Maps (1-51).

15-01-02: Basic Extension Data Setup - Outgoing Trunk Line Preference
Enable (1) or disable (0) Outgoing Trunk Line Preference for extensions.

15-02-09: System Telephone Basic Data Setup - Ringing Line Preference for Intercom Calls
Enable Idle (0) or Ringing (1) Line Preference for Intercom calls. See the table below for interaction.

15-02-10: System Telephone Basic Data Setup - Ringing Line Preference for Trunk Calls
Enable Idle (0) or Ringing (1) Line Preference for trunk calls. See the table below for interaction.

15-06-01: Trunk Access Map for Extensions
For Outgoing Line Preference and Auto-Answer of Non-Ringing Lines, assign trunk Access Maps to extensions.

20-10-07: Class of Service Options (Answer Service) - Automatic Answer of Universal Calls
Enable (1) or disable (0) an extension’s ability to use Universal Auto Answer for non-ringing lines.

22-01-01: System Options for Incoming Calls - Incoming Call Priority
Determine if ringing Intercom calls (0) or ringing trunk calls (1) should have answer priority. See the table below for interaction.

22-04-01: Incoming Extension Ring Group Assignment
Assign extensions to ring groups (1-25). Auto-Answer for Non-Ringing Lines only works for trunks that do not ring an extension.

22-05-01: Incoming Trunk Ring Group Assignment
Assign trunks to ring groups (1-25). Auto-Answer for Non-Ringing Lines only works for trunks that do not ring an extension.

23-03-01: Universal Answer/Auto Answer
For each extension, select the route that it will use for Auto-Answer for Non-Ringing Lines. The routes correspond to the Trunk Group Routing table set in Program 14-06.

• Related Features
  • Direct Inward Line
    DILs do not affect Incoming Line Preference operation.
  • Ring Groups
    Trunks ring extensions according to Ring Group programming.
  • Trunk Group Routing
    If an extension gets trunk dial tone when the user lifts the handset, the system uses the “dial 0” routing to select the trunk.

• Operation
  To answer a ringing call if your phone has Ringing Line Preference:
  1. Refer to the chart on the previous page.
To place a call if your phone has Outgoing Line Preference:

1. Refer to the chart on the previous page.
Long Conversation Cutoff

• Description

For incoming and outgoing central office calls, each trunk can be programmed to disconnect after a defined length of time. The timer begins when the trunk is seized and disconnects the call after the timer expires.

When used with the Warning Tone for Long Conversation feature, the system can provide a warning tone on outgoing trunks calls before the call is disconnected. This tone is not available to analogue single line telephone users nor is it available for incoming calls.

Conditions

None

Default Setting

Disabled.

• Programming

14-01-14: Basic Trunk Data Setup - Long Conversation Cutoff
Enable (1) or disable (0) a trunk’s ability to disconnect incoming and outgoing central office calls automatically.

14-01-15: Basic Trunk Data Setup - Long Conversation Alarm Before Cut Off
Enable (1) or disable (0) the Long Conversation Alarm for each trunk.

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to extensions.

20-13-02: Class of Service Options (Supplementary Service) - Long Conversation Cutoff Incoming
Enable (1) or disable (0) an extension’s class of service from using Long Conversation Cutoff for incoming calls.

20-13-03: Class of Service Options (Supplementary Service) - Long Conversation Cutoff Outgoing
Enable (1) or disable (0) an extension’s class of service from using Long Conversation Cutoff for outgoing calls.

20-21-03: System Options for Long Conversation - Long Conversation Cutoff Timer for incoming calls
Enter the time the system will wait before disconnecting incoming trunks (0-64800 seconds).

20-21-04: System Options for Long Conversation - Long Conversation Cutoff Timer for Outgoing Calls
Enter the time the system will wait before disconnecting outgoing trunks (0-64800 seconds).

• Related Features

• Central Office Calls, Answering/Central Office Calls, Placing
Long Conversation Cutoff can disconnect incoming and outgoing CO calls after a set time period.
• **Direct Inward System Access (DISA)**
  Long conversation cutoff is controlled separately for DISA.

• **Warning Tone for Long Conversation**
  Using the Warning Tone for Long Conversation feature allows users on outgoing calls to hear a warning tone prior to the call disconnecting.

• **Operation**

  Feature is automatic once programmed.
Loop keys

• Description

Loop keys are uniquely programmed function keys that simplify placing and answering trunk calls. Loop keys are used when the phone does not have a line key for the trunk. The loop key gives the user a key with lamp indication that makes holding/transferring of trunk calls easier. There are three types of loop keys: Incoming Only, Outgoing Only and Both Ways.

• Incoming Only Loop Keys

Incoming Only loop keys are for answering trunk calls. An extension can have an incoming loop key for a specific trunk group (fixed) or a “catch all” loop key for any trunk group (switched). Fixed loop keys allow an extension user to tell the type of call by the ringing key. Switched loop keys are ideal for an extension with a large number of feature keys. In addition, switched loop keys are a destination for any trunk not on a line key or fixed loop key. Without a switched loop key, calls not appearing on a line key or fixed loop key will ring only the CALL key. Incoming Only loop keys also receive Transferred trunk calls.

• Outgoing Only Loop Keys

Outgoing Only loop keys are for placing trunk calls. An extension can have outgoing loop keys for a specific trunk group or for ARS access. When a user presses the loop key, they get dial tone from the first available trunk in the group (or from ARS if programmed). Outgoing Only loop keys help ensure that an extension will always have a key available for placing calls.

• Both Ways Loop Keys

Both Ways loop keys combine the functions of both Incoming Only and Outgoing Only loop keys. Both Ways loop keys work well for extension users that handle a moderate amount of calls and don’t separate keys for incoming and outgoing calls. Both Ways loop keys also receive Transferred trunk calls.

An extension can have many loop keys - of any type. You can program an operator, for example, with four loop keys for incoming calls and four for outgoing calls.

Once a loop key call is set up, the user can handle it like any other trunk call. For example, the user can place the call on Hold, Transfer it to a co-worker or send it to a Park Orbit.

An incoming call will ring the first available loop key, beginning with the lowest numbered key. If keys 1-3 are loop keys, for example, the first incoming call rings key 1. If key 1 is busy, the next call rings key 2. If keys 1 and 2 are busy, the next call rings key 3. If all three keys are busy, additional incoming calls queue for the first available key. The telephone display will show “WAITING - LOOP KEY” if the user presses a loop key when there are additional calls waiting.

Conditions

None

Default Setting

Each system phone has a both way loop key assigned to key 22.
• Programming

14-05-01: Trunk Groups
Assign trunks to trunk groups (1-25). In general, loop keys access trunks within specific trunk groups.

14-07-01: Trunk Access Map Setup
Set up the Trunk Access Maps. For example, if an extension's loop key is for incoming and outgoing, make sure the Trunk Access Map allows incoming and outgoing access. Also see Program 15-06 below.

15-06-01: Trunk Access Map for Extensions
Assign Trunk Access Maps to extensions. Also see Program 14-07 above.

15-07-01: Programming Function Keys
Program function keys as trunk group/loop keys (*02 or *05). For additional data, in Program 15-13 enter 0 (incoming only), 1 (outgoing only) or 2 (both ways).

15-13-01: Loop Keys
For each loop key on an extension, program options for Data 1 and Data 2 (see the chart below).

20-07-10: Class of Service Options (Administrator Level), Programmable Function Key Programming (Appearance Level)
If an extension should be able to use Programmable Functions Keys to program a loop key, enable this option in the user’s Class of Service (1-15).

22-04-01: Incoming Extension Ring Group Assignment
Assign extensions to Ring Groups (1-25). An incoming loop key will ring only for those trunks programmed to ring. Also see Program 22-05.

22-05-01: Incoming Trunk Ring Group Assignment
Assign trunks to Ring Groups (1-25). An incoming loop key will ring only for those trunks programmed to ring. Also see Program 22-04 above.

• Related Features

• Automatic Route Selection (ARS) / Central Office Calls, Answering / Central Office Calls, Placing
Program incoming and outgoing access and routing options.

• Off Hook Signalling
If enabled, a user hears Call Waiting beeps if additional calls are waiting behind a loop key.

• Programmable Function Keys
If you have a line and loop key for the same trunk, the line key has precedence. An incoming call rings the line key, not the loop key. When you press the loop key for an outgoing call, the line key lights.

• Ring Groups
Trunks ring telephones according to their Ring Group assignments (Programs 22-04 and 22-05).
• **Direct Inward Dialling (DID) / Direct Inward Line (DIL) / Direct Inward System Access (DISA)**
  
  Transferred DID, DIL, and DISA calls do not require ring group programming.

**Operation**

**To place a call on a loop key:**

1. Press outgoing or both ways loop key.
   
   *You hear dial tone and the key lights green.*

2. Dial number.

**To answer a call on a loop key:**

1. Press loop key.
   
   *The key lights green and you connect to the call.*

   *If there are additional calls waiting to be answered, your display shows: WAITING - LOOP KEY*

**To program a loop key:**

1. Press the SPK key.

2. Dial 852.

3. Press the key you want to program as a loop key.

4. Dial *05.

5. Dial the loop key type:
   
   - **0** = Incoming only
   - **1** = Outgoing only
   - **2** = Both ways (incoming and outgoing)

6. Dial the loop key routing option for incoming, outgoing, or incoming and outgoing calls:
   
   - **000** = Trunk Group Routing or ARS (if installed)
   - **01-25** = Trunk Groups
     
     *If you selected option 2 in step 5 above, enter the incoming Trunk Group followed by the outgoing Trunk Group.*

7. Press SPK to hang up.
Meet Me Conference

• Description
With Meet Me Conference, an extension user can set up a Conference with their current call and up to 32 other internal or external parties (16 parties in total). Each party joins the Conference by dialling a Meet Me Conference code. Meet Me Conference lets extension users have a telephone meeting -- without leaving the office.

Conditions
A. Up to four eight-party conferences may be established simultaneously.
B. Conference circuits may be used by other facilities, such as barge in, conversation recording and tandem trunking.

Default Setting
Enabled.

• Programming
15-07-01: Programming Function Keys
Assign function keys for Conference (code 07), External Zone Paging (code 19 + zone), External All Call Paging (code 20), Internal Zone Paging (code 21 + zone) and Meet Me Conference/Paging Pickup (code 23).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-10-06: Class of Service Options (Answer Service) - Meet Me Conference and Paging
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to initiate a Meet Me Conference or Meet Me Page.

31-01-04: System Options for Internal/External Paging - Privacy Release Time
Set the Privacy Release Time (0-64800 seconds). Once the user initiates Meet Me Conference, the system waits this interval for the Paged party to join the conversation.

• Related Features
  • Conference
An extension user can also use other types of Conferences to join callers together.
  • Meet Me Paging
An extension user can have a telephone meeting with a co-worker on a Page zone.
  • Programmable Function Keys
Meet Me Conference requires a Conference key. In addition, Internal and External Paging keys simplify Meet Me Conference operation.

• Operation
Meet Me External Conference
To make a Meet Me external Conference:
System Phone

2. Dial 803 and the External Paging Zone code (1-3 or 0 for All Call)
   OR
   Dial 751 and the Combined Paging Zone code 1-3 (for Internal/External Zones 1-3) or 0 (for Internal/External All Call).
   OR
   Press Page key (PGM 15-07 or SC 851: 19 + zone & 20).

3. Announce the zone.

4. When co-worker answers your page, press the Conference key twice.

5. Repeat steps 1-4 for each co-worker you want to add.

**Single Line Telephone**

1. While on a call, hookflash and dial 826.

2. Dial 803 and the External Paging zone code (1-3 or 0 for All Call).
   OR
   Dial 751 and the Combined Paging Zone code 1-3 (for Internal/External Zones 1-3) or 0 (for Internal/External All Call).

3. Announce the zone.

4. When co-worker answers your page, press the hookflash twice.

5. Repeat steps 1-4 for each co-worker you want to add.

**To join a Meet Me External Conference:**

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.

2. Dial 865.

3. Dial the announced External Paging Zone code (0-3).
   
   You connect to the other parties.

**Meet Me Internal Conference:**

**To make a Meet Me Internal Conference:**

**System Phone**

2. Dial 801 and the Internal Paging Zone code (0-6 or 00-32).
   OR
   Dial 751 and the Combined Paging Zone code 1-6 (for Internal/External Zones 1-6) or 0 (for Internal/External All Call).

3. Announce the zone.

4. When co-worker answers your page, press the Conference key twice.

5. Repeat steps 1-4 for each co-worker you want to add.

**Single Line Telephone**

1. While on a call, hookflash and dial 826.

2. Dial 801 and the Internal Paging Zone code (0-6 or 00-32).
   OR
   Dial 751 and the Combined Paging Zone code 1-3 (for Internal/External Zones 1-3) or 0 (for Internal/External All Call).

3. Announce the zone.
4. When co-worker answers your page, press the hookflash twice.
5. Repeat steps 1-4 for each co-worker you want to add.

To join a Meet Me Internal Conference:
1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 863 (if your extension is in the zone called).
   OR
   Dial 864 and the zone number (if your extension is not in the zone called).
   OR
   Press the Meet Me Conference/Paging Pickup key (PGM 15-07 or SC 851: 23) if your extension is in the zone called.
Meet Me Paging

• Description

Meet Me Paging allows an extension user to Page a co-worker and privately meet with them on a Page zone. The Paging zone is busy to other users while the meeting takes place. While the co-workers meet on the zone, no one else can hear the conversation, join in or make an announcement using that zone. Meet Me Paging is a good way to talk to a co-worker when their location is unknown. If the co-worker can hear the Page, they can join in the conversation.

Conditions

One external paging zone is provided as a standard feature of the system. If more than one external paging zone is required, a 2PGDU unit must be installed in the system, providing an additional 2 zones.

Default Setting

Enabled.

• Programming

Note: For additional programming information on Paging, refer to the Paging External and Paging Internal features.

15-07-01: Programming Function Keys

Assign function keys for External Zone Paging (code 19 + zone), External All Call Paging (code 20), Internal Zone Paging (code 21 + zone) or Meet Me Conference/Paging Pickup (code 23).

20-06-01: Class of Service for Extensions

Assign a Class Of Service (1-15) to an extension.

20-10-06: Class of Service Options (Answer Service) - Meet Me Conference and Paging

In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to initiate a Meet Me Conference or Meet Me Page.

• Related Features

• Meet Me Conference

An extension user can set up a Conference with their current call and up to 7 other inside parties.

• Meet Me Paging Transfer

With Meet Me Paging Transfer, a user can page a co-worker and have the call automatically transfer when the co-worker answers the page.

• Paging, Internal / Paging, External

An extension’s access to internal and external page zones affects the Meet Me Paging feature.

• Programmable Function Keys

Internal and External Paging keys simplify Meet Me Paging operation.

• Operation

Meet Me External Page:
To make a Meet Me External Page:

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 803 and the External Paging Zone code (1-3 or 0 for All Call).
   OR
   Dial 751 and the Combined Paging Zone code 1-3 (for Internal/External Zones 1-3) or 0 (for Internal/External All Call).
3. Announce the zone.
   OR
   1. At system phone, press the External Paging Zone key (PGM 15-07 or SC 851: 19 + zone & 20).
   2. Announce the zone.

To join a Meet Me External Page:

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 865.
3. Dial the announced External Paging Zone (0-3).
   You connect to the other party.

Meet Me Internal Page

To make a Meet Me Internal Page:

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 801 and dial the Internal Paging Zone code (0-6, 00-32).
   OR
   Dial 751 and the Combined Paging Zone code 1-3 (for Internal/External Zones 1-3) or 0 (for Internal/External All Call).
3. Announce the zone.
   OR
   1. At system phone, press the External Paging Zone key (PGM 15-07 or SC 851: 19 + zone & 20).
   2. Announce the zone.

To join a Meet Me Internal Page:

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 863 (if your extension is in the zone called).
   OR
   Dial 864 and the zone number (if your extension is not in the zone called).
   OR
   Press the Meet Me Conference/Paging Pickup key (PGM 15-07 or SC 851: 23) if your extension is in the zone called.
Meet Me Paging Transfer

• Description

If a user wants to Transfer a call to a co-worker but they don’t know where the co-worker is, they can use Meet Me Paging Transfer. With Meet Me Paging Transfer, the user can Page the co-worker and have the call automatically Transfer when the co-worker answers the Page. Since Meet Me Paging Transfer works with both Internal and External Paging, a call can be quickly extended to a co-worker anywhere in the facility.

Conditions

One external paging zone is provided as a standard feature of the system. If more than one external paging zone is required, a 2PGDU unit must be installed in the system, providing an additional 2 zones.

Default Setting

Enabled.

• Programming

Note: For additional programming information on Paging, refer to the Paging External and Paging Internal features.

15-07-01: Programming Function Keys

Assign function keys for External Zone Paging (code 19 + zone), External All Call Paging (code 20), Internal Zone Paging (code 21 + zone) and Meet Me Conference/Paging Pickup (code 23).

20-06-01: Class of Service for Extensions

Assign a Class Of Service (1-15) to an extension.

20-10-06: Class of Service Options (Answer Service) - Meet Me Conference and Paging

In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to initiate a Meet Me Paging Transfer.

• Related Features

• Meet Me Conference

An extension user can set up a Conference with their current call and up to 7 other inside parties.

• Meet Me Paging

An extension user can Page a co-worker and meet with them on a Page zone.

• Paging, External

With External Paging, an extension user can broadcast an announcement over Paging equipment connected to external Paging zones.

• Paging, Internal

Internal Paging lets extension users broadcast announcements to other keysets.

• Programmable Function Keys

Function keys simplify Meet Me Paging Transfer operation.

• Operation
Meet Me External Paging Transfer

To make a Meet Me External Paging Transfer:
1. At system phone, while on a call, press HOLD.
   OR
   At single line telephone, while on a call, hookflash.
2. Press the External Paging Zone key (PGM 15-07 or SC 851: 19 + zone & 20).
   OR
   Dial 803 and the External Paging Zone code (1-3 or 0 for All Call).
   OR
   Dial 751 and the Combined Paging Zone code 1-3 (for Internal/External Zones 1-3) or 0 (for Internal/Internal All Call).
3. Announce the call.
4. When Paged party answers, hang up to Transfer the call to them.

To join a Meet Me External Paging Transfer:
1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 865.
3. Dial the announced External Paging Zone (0-3).
   You connect to the Paging party.
4. Stay on the line.
   After the Paging party hangs up, you connect to the transferred call.

Meet Me Internal Paging Transfer

To make a Meet Me Internal Paging Transfer:
1. At system phone, while on a call, press HOLD.
   OR
   At single line telephone, while on a call, hookflash.
2. Press Internal Paging Zone key (PGM 15-07 or SC 851: 20 + zone).
   OR
   Dial 801 and the Internal Paging Zone code (0-6 or 00-32).
   OR
   Dial 751 and the Combined Paging Zone code 1-3 (for Internal/External Zones 1-3) or 0 (for Internal/Internal All Call).
3. Announce the call.
4. When Paged party answers, hang up to Transfer the call to them.
   The answering party connects to the trunk call when you hang up.

To join a Meet Me Internal Paging Transfer:
1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 863 (if your extension is in the zone called).
   OR
   Dial 864 and the zone number (if your extension is not in the zone called).
   OR
   Press the Meet Me Conference/Paging Pickup key (PGM 15-07 or SC 851: 23) if your extension is in the zone called.
3. Stay on the line.
   After the Paging party hangs up, you connect to the transferred call.
Memo Dial

• Description

While on an outside call, Memo Dial lets a display system phone user store an important number for easy redialling later on. The telephone can be like a notepad. For example, a user could dial Directory Assistance and ask for a client's telephone number. When Directory Assistance plays back the requested number, the caller can use Memo Dial to jot the number down in the telephone's memory. They can quickly call the Memo Dial number after hanging up.

When a user enters a Memo Dial number, the dialled digits do not output over the trunk. Dialling Memo Dial digits does not interfere with a call in progress.

Conditions

When Memo Dial calls out, it dials out the entire stored number. Memo Dial does not automatically strip out trunk or PBX access codes if entered as part of the stored number.

Default Setting

Disabled.

• Programming

15-07-01: Programming Function Keys
Assign a function key for Memo Dial (code 31).

• Related Features

• Central Office Calls, Placing
A user's outgoing dialling options affect how a Memo Dial call is placed.

• Last Number Redial
Quickly redial the last outside number dialled.

• Single Line Telephones
Memo Dial is not available at single line telephones.

• Save Number Dialed
Save the last outside number dialled.

• Operation

To store a number while you are on a call:

1. While on a call, press Memo Dial key (PGM 15-07 or SC 851: 31).
2. Dial number you want to store.
3. Press Memo Dial key again and continue with conversation.

To call a stored Memo Dial number:

1. Do not lift the handset.
2. Press Memo Dial key (PGM 15-07 or SC 851: 31).
3. Press a CALL key.

The stored number dials out only if you store a trunk access code before the number.

OR

Press line key.
The stored number dials out.

To check to see the stored Memo Dial number:
1. Do not lift handset.
2. Press Memo Dial key (PGM 15-07 or SC 851: 31).
   The stored number displays.

To cancel (erase) a stored Memo Dial number:
1. Press a CALL key.
2. Press Memo Dial key (PGM 15-07 or SC 851: 31).
Message Waiting

• Description

An extension user can leave a Message Waiting indication at a busy or unanswered extension requesting a return call. The indication is a flashing MW lamp at the called extension and a steadily lit MW lamp on the calling extension. Answering the Message Waiting automatically calls the extension which left the indication. Message Waiting ensures that a user will not have to recall an unanswered extension. It also ensures that a user will not miss calls when their extension is busy or unattended. Additionally, Message Waiting lets extension users:

• View and selectively answer messages left at their extension (display system phone only)
• Cancel all messages left at their extension
• Cancel messages they left at other extensions

An extension user can leave Messages Waiting at any number of extensions. Also, any number of extensions can leave a Message Waiting at the same extension. A periodic VRS announcement may remind users that they have Messages Waiting.

Message Waiting on Single Line Telephones

The system provides 4 methods of indicating Message Waiting on a Single Line Telephone (with or without a MW lamp). These methods are:

1. Special dial tone
2. Intermittent ringing
3. VRS announcement
4. Message waiting lamp

Note the following items for this feature:

• This feature can apply to any analogue single line telephone.
• Since it’s possible that a user will pick up the handset and dial without listening for dial tone, the system is able to detect Dialling during a VRS message and special dial tone.
• All of the message waiting indication methods may be active at any SLT.
• Options are available based on a station’s class of service.
• A DSP daughter board must be installed for VRS messages.
• There is a programmable delay from the time a SLT goes off-hook until the VRS message begins. The default is set to 1 second.
• The time between intermittent rings is programmable. The default time is 1800 seconds (30 minutes). If this timer is set to “0” then the system rings once.
• These signalling methods are available to all analogue single line telephones, whether connected to an 308M/308ME card.
• If both the Message Wait dial tone and VRS message are active, the user will hear the VRS message first then hear the Message Wait dial tone. If the special dial tone is not set, then the user will hear regular dial tone.

Note: The regular dial tone may be different based on the phone’s status.
• The VRS announcement does not work when telephones have the following features set:
  1. Outgoing Trunk Line Preference
  2. Hot Line (Internal)
  3. Hot Line (External)

**Conditions**

Reminder messages require a DSP daughter board for VRS messages.

A. Message Waiting on a Single Line Telephone is not indicated by the MW lamp.
B. Message Waiting lamps at the SLT must be compatible with the Xen Topaz operation (24V to 100V switching at 500msec. interval).

**Default Setting**

Enabled.

**• Programming**

**15-07-01: Programming Function Keys**
Assign a function key for Message Waiting (code 38).

**20-06-01: Class of Service for Extensions**
Assign a Class Of Service (1-15) to an extension.

**20-13-07: Class of Service Options (Supplementary Service) - Message Waiting**
In an extension's Class of Service, enable (1) or disable (0) an extension's ability to leave Messages Waiting.

**24-02-05: System Options for Transfer - Message Wait Ring Interval Timer**
For SLTs without message waiting lamps, this timer determines the amount of time between intermittent ringing. If this timer is set to '0' then the system rings once.

**• Related Features**

• **Handsfree Answerback/Forced Intercom Ringing**
  When a user responds to a Message Waiting, the system does not cancel the Message Waiting indication if the called party uses Handsfree Answerback. The system cancels the indication only if the called party lifts the handset or presses SPK.

• **Programmable Function Key**
  A Message Waiting key simplifies this feature's operation.

• **Single Line Telephones**
  The intermittent ringing or stutter dial tone options may be used to indicate voice mail messages for single line sets which do not have a Message Waiting lamp.

• **Voice Response System**
  Reminder messages require a DSP daughter board for Voice Response System (VRS).

• **Voice Mail Integration**
  Telephone-to-telephone Message Waiting works when the voice mail is installed. The MW LED may be used to indicate voice mail messages if there is no extension number assigned to the voice mail key in system programming.
The MSG key at system phone can also be set as the Voice Mail Message key.

**Operation**

To leave a Message Waiting:

1. Call busy or unanswered extension.
2. Press Message Waiting key (PGM 15-07 or SC 851: 38)
3. Hang up.
   
   *With system phones, the MW LED lights.*

To answer a Message Waiting:

*When you have a message, your MW LED flashes fast for System Phones.*

1. At a system phone, press a SPK key and dial 841.
2. Press Message Waiting key (PGM 15-07 or SC 851: 38).
3. At single line telephones, lift the handset and dial 841.

   *If the called extension doesn’t answer, dial 0 or press your Message Waiting key to automatically leave them a message.*

   *Normally, your MW LED goes out. If it continues to flash, you have new messages in your “Voice Mail” mailbox or a new “General Message”. Go to “To check your messages” below.*

To cancel all your Messages Waiting:

*This includes messages you have left for other extensions and messages other extension have left for you.*

1. At system phone, press a SPK key.
2. At single line telephone, lift handset.
3. Dial 873.
4. Hang up.

To cancel the Messages Waiting you have left at a specific extension:

1. At system phone, press a SPK key.
2. At single line telephone, lift handset.
3. Dial 871.
4. Dial number of extension you don’t want to have your messages.
5. Hang up.

To check your messages:

1. Press CHECK
2. Dial 841.

*You can have any combination of the message types in the table below on your phone.*
3. Press VOL ▼ or VOL ▲ to scroll through your display.

4. When you find the message you want to answer, press a SPK key. You'll either:
   • Go to your Voice Mail mailbox.
   • Listen to the new General Message.
   • Automatically call the extension that left you a Message Waiting.

Single Line Telephones:

*With VRS message only:*

1. Lift handset.
2. After programmed delay, the extension user hears the VRS message “You have a message”.
3. Listen for dial tone.

*With special dial tone only:*

4. Lift handset.

   *The system provides the special Message Wait dial tone immediately.*

*With VRS and special dial tone:*

1. Lift handset.
2. After the programmed delay, the extension user hears the VRS message “You have a message”.

   *The system provides the special Message Wait dial tone immediately.*
Microphone Mute

• Description

Microphone Mute lets a system phone user turn off their phone’s handsfree or handset microphone at any time. When activated, Microphone Mute prevents the caller from hearing conversations in the user’s work area. The user may turn off the microphone while their telephone is idle, busy on a call or ringing. The microphone stays off until the user turns it back on.

Conditions
None

Default Setting
Enabled (using MIC key).

• Programming

15-07-01: Programmable Function Keys
If an extension needs handset microphone mute, program a Handset Transmission Mute key (code 40). To program a Mic Mute key, use code 02 as the entry. The Mic Mute key will mute conversation on a handsfree call, while the Handset Mute key will mute the handset transmission on a non-handsfree call.

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

• Related Features

• Handsfree Answerback/Forced Intercom Ringing
Microphone Mute does not operate if the user calls another extension and the called extension responds without lifting the handset or pressing SPK. With Microphone Mute enabled, Handsfree Answerback callers to an extension hear a single beep (instead of two).

• Programmable Function Keys
Handset Microphone Mute requires a uniquely programmed function key.

• Single Line Telephones
Single line telephones cannot use Microphone Mute.

• Operation

To mute your telephone’s handset or Handsfree microphone while on a call:

1. Press MIC.
   
   This only turns off the Handsfree microphone.
   
   OR
   
   Press Microphone Mute key (PGM 15-07 or SC 851: 40).
   
   This turns off both the handset and Handsfree microphone.

To turn your telephone’s microphone back on:

1. Press MIC.
   
   Use MIC only if you pressed it initially to turn off your Handsfree microphone.
   
   OR
Press Microphone Mute key (PGM 15-07 or SC 851: 40).

Use the Microphone Mute key only if you pressed it initially to turn off your handset or Handsfree microphone.
Multiple Directory Numbers / Call Coverage

• Description

Multiple Directory Numbers let a system phone have more than one extension number. Calls can route to the system phone’s installed number or to the system phone’s “virtual extension” Multiple Directory Number key. This helps users identify incoming calls. For example, an extension installed at 304 (Sales) could have a virtual extension for 460 (Service). Calls to 304 ring the extension normally. Calls to 460 ring the Multiple Directory Number key. This lets the user at extension 304 differentiate Sales calls from Service calls.

Call Coverage

A system phone can have Multiple Directory Number keys set up as Call Coverage keys for co-worker’s extensions. The Call Coverage key lights when the co-worker’s extension is busy and flashes slowly when the co-worker has an incoming call. The Call Coverage key can ring immediately when a call comes into the covered extension, ring after a delay or not ring at all. In addition, the system phone user can press the Call Coverage key to intercept their co-worker’s incoming call. The user can also go off hook and press the Call Coverage key to call the covered extension.

If the covered extension is busy and they receive a second call, the covering extension’s Call Coverage key will flash. The user just presses the flashing key to pick up the call.

The Call Coverage keys follow the extension’s Do Not Disturb and Off-Hook Signalling programming. These keys do not, however, indicate the lamping for extensions in DND. If this is required, a Hotline key can be used instead.

Place and Receive Calls on Call Coverage/Multiple Directory Number Keys

Multiple Directory Number keys/Call Coverage keys can be used three separate ways, depending on how the key is defined in Program 15-02-21.

• A DSS key to the extension and for receiving incoming calls
• Answering incoming calls with the ability to place outgoing ICM or CO calls
  OR
• Just for receiving incoming calls

A system phone can have Multiple Directory Number/Call Coverage keys for many different extensions and virtual extensions. In addition, co-workers can share the same Multiple Directory Numbers. For example, everyone in the Service Department could have a key for the Sales Department’s virtual extension.

Auto Off-Hook Answer and Ringing Line Preference for Call Coverage Keys

An extension’s Call Coverage Keys can be programmed to allow the user to simply pick up the handset to answer a ringing call. So as not to interfere with ringing trunk or Intercom calls, the system automatically assigns Call Coverage Key ringing with the lowest answering priority. If multiple Call Coverage Keys are ringing, answering priority is set first by the assigned ring pattern and then by the key position.
Virtual Extension vs. Ring Groups

As the system does not allow voice mail calls to ring Ring Groups, a virtual extension can be created which will allow you to direct calls to more than one extension. When you program a Call Coverage Key for that extension to ring, the next call can then be answered.

This could allow a voice mail caller to dial the virtual extension and have all the extensions with the same virtual extension key ring. The system can be programmed as follows:

- Program 11-04, 15-01-01: Assign a virtual extension number and name (example: virtual port 1, extension 5400, Sales).
- Program 15-07: Assign a Call Coverage key (*03) to an extension for the virtual extension number assigned.

The end user can then simply transfer the call to the virtual extension number (example: 5400). To allow calls to be queued at the virtual you must place the virtual within a Department Group and have the user transfer calls to the pilot number, the call is in placed in a queue and will be answered in turn as soon as the extension is available.

Conditions

A. More than one extension can share the same Multiple Directory Number.
B. An extension can have more than one Multiple Directory Number (limited only by the number of available function keys).

Default Setting

Disabled.

• Programming

11-04-01: Virtual Extension Numbering
Assign extension numbers to virtual extensions (virtual extension ports=1-50).

15-01-01: Basic Extension Data Setup - Extension Name
Assign names to virtual extensions.

15-02-21: System Telephone Basic Data Setup, Virtual Extension Access Mode
Determine whether an extension’s Virtual Extension/Call Coverage Key should be used as a DSS key to the extension and for receiving calls (0), answering incoming calls and ability to place outgoing ICM or CO calls (1), or just receiving incoming calls (2).

15-07-01: Programming Function Keys
Assign function keys for Multiple Directory Numbers (code *03 + extension number).

15-08-01: Incoming Virtual Extension Ring Tone Setup
Assign a ring tone (0-4) to each extension port and virtual extension port assigned to a Multiple Directory Number key. If ringing is enabled for the key in Program 15-09, the key rings with the tone set in this program. Each port can have one of four different rings.
15-09-01: Virtual Extension Ring Assignment
Individually program an extension’s Multiple Directory Number function keys to either ring (1) or not ring (0).

15-10-01: Incoming Virtual Extension Ring Tone Order Setup
Set the priority (1-4) for the Multiple Directory Number Ring Tones set in Program 15-08. When Multiple Directory Number calls ring an extension simultaneously, the tone with the highest priority (e.g., 1) rings. The other keys just flash.

15-11-01: Virtual Extension Delayed Ring Assignment
Individually program an extension’s Multiple Directory Number keys for Delayed Ringing (1) or Immediate Ringing (0). Also see Program 20-04-03 above.

20-04-03: System Options for Virtual Extensions - Call Coverage Delay Interval
Multiple Directory Number/Call Coverage Keys set for Delayed Ringing (see Program 15-11 below) ring the covering extension after this interval.

20-06-01: Class of Service for Extensions
Assign a COS to each extension (1-15).

20-07-10: Class of Service Options (Administrator Level) - Programmable Function Key
Determine whether an extension’s Class of Service allows a user to set up a Call Coverage key using service code 852 (Enable=1, Disable=0).

20-10-08: Class of Service Options (Answer Service) - Auto Off-Hook Answer for Call Coverage Keys
Determine whether an extension’s Call Coverage Key should be automatically answered when the handset is lifted (0=disabled, 1=enabled). With multiple ringing calls, Programs 1508, 15-10 and 23-04 determine which call is answered first.

23-04-01: Ringing Line Preference for Virtual Extensions
When an extension has a virtual extension assigned to a Programmable Function Key, this program determines the priority (1-4) for a Ring Group (1-25) for automatically answering the ringing calls when the handset is lifted. If “00” is selected for the Ring Group, when the user lifts the handset, the user will answer a ringing call from any group.

• Related Features
  • Class of Service
    Class of Service options apply to Multiple Extension Appearances.
  • Department Calling
    Multiple Extension Appearances can be in Department Calling Groups.
  • Do Not Disturb / Off-Hook Signalling
    A Call Coverage Key follows DND and Off-Hook Signalling programming for an extension.
  • Group Call Pickup
    Multiple Extension Appearances can be in Call Pickup Groups.
• **Line Preference**
  An extension user can answer an outside call on a Call Coverage Key just by lifting the handset.

• **Programmable Function Keys**
  This feature requires uniquely programmed function keys.

**Operation**

To answer a call ringing a Multiple Directory Number:

1. Press flashing Multiple Directory Number key (PGM 15-07 or SC 852: *03 + ext.).

To place a call to a Multiple Directory Number (including a Call Coverage key):

1. Press a CALL key.
2. Dial Multiple Directory Number number or press Multiple Directory Number key.

To place a call from a Multiple Directory Number (including a Call Coverage key):

1. Press the Multiple Directory Number key.
   
   *ICM dial tone is heard.*
2. Place an intercom call or dial a trunk access code to seize an outside line and place your call.

To set up a Call Coverage Key:

1. Press a SPK key.
2. Dial 852.
3. Press the programmable key you want to program.
   
   *The previously programmed entry displays.*
4. Dial *03.
5. Dial the number of the extension you want to cover.
6. Press HOLD once for Immediate Ring
   
   *To set for Delayed Ring, skip to Step 8.*
7. Dial the Mode number(s) in which the key will be used.
   
   1=Day 1
   2=Night 1
   3=Midnight 1
   4=Rest 1
   5=Day 2
   6=Night 2
   7=Midnight 2
   8=Rest 2
8. Press HOLD to set up Delayed Ring
   
   OR
   
   Skip to Step 10.
9. Dial the Mode number(s) in which the key will be used.
   
   1=Day 1
   2=Night 1
   3=Midnight 1
   4=Rest 1
   5=Day 2
   6=Night 2
   7=Midnight 2
   8=Rest 2
10. Press SPK to hang up.
Music on Hold

• Description

Music on Hold (MOH) sends music to calls on Hold and parked calls. The music lets the caller know that their call is waiting, not forgotten. Without Music on Hold, the system provides silence to these types of calls. The Music on Hold source can be internal (synthesized) or from a customer-provided music source (i.e., tape deck, receiver, etc.).

Note: In accordance with copyright law, a license may be required if radio, television broadcasts or music other than material not in the public domain are transmitted through the Music on Hold feature of telecommunications systems. NEC Business Solutions Ltd hereby disclaims any liability arising out of the failure to obtain such a license.

Music on Hold Source
There are 3 options available: (Program 10-04-01 & 10-04-02)

Internal Music Tune - The tune is set by Program 10-04-02.

External Source - Via the EXMOH input or audio input via a 2PGDU card.

Silence - Callers on hold hear silence.

Music on Hold per DDI Number
The music on hold source can be selected for individual DDI numbers by Program 22-11-09.

There are 3 options available:
0 - Use the music source set by Program 10-04-01.
1 - Back Ground Music input.
2 - ACI input via a 2PGDU card.
The music source will be used for incoming DDI calls only.

Music on Hold for Internal calls
The music source is set by Program 10-04-01.
It is not possible to have an input via a 2PGDU card for internal calls, the external input must be via the Topaz Main Unit (EXMOH input).

Music on Hold for non-DDI Trunk calls
The music on hold source is set per trunk port by Program 14-08
There are 3 options available:
0 - Use the music source set by Program 10-04-01
1 - Back Ground Music input on the NTCPU port
2 - ACI input via a 2PGDU card.
The music source will be used for outgoing trunk calls or incoming non-DDI calls only.

Conditions
A. Refer to the System Hardware Manual for instructions on how to install an external music source.
B. The system supports one External Music On Hold source input, via either the built-in music port or the 2PGDU card.
C. If a 2PGDU card is installed and has MOH assigned to one of its ports (Program
10-03-01 and 33-01-01=4), the built-in music port is no longer used for MOH, i.e. the 2PGDU card takes priority.

**Default Setting**

Music On Hold is provided from the internal (synthesised) music source.

**• Programming**

10-04-01: **Music on Hold Setup - Music on Hold Source Selection**
   Determine whether the system should use internal (0) or external (1) music source.

10-04-02: **Music on Hold Setup - Music Selection for Internal Source**
   Set the Music on Hold selection. The options are 0 (silence), 1-2 (synthesised music selections).

10-04-03: **Music on Hold Setup - Audio Gain Setup**
   Set the Music on Hold audio gain (1-64).

14-08-01: **Music on Hold Source for Trunks**
   For each trunk, set the Music on Hold source (0=Internal synthesized MOH, 1=Customer-provided source connected to BGM port, 2=Customer-provided source connected to ACI port).

14-08-02: **Music on Hold Source Port Number**
   If the MOH type is “2” in 14-08-01, for each trunk enter the ACI source port number (0 – 96).

20-06-01: **Class of Service for Extensions**
   Assign a Class Of Service (1-15) to an extension.

20-07-02: **Class of Service Options (Administrator Level) - Changing the Music on Hold Tone**
   In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to change the Music on Hold tone (Service Code 881).

22-11-09: **DID Translation Table Number Conversation - MOH Source**
   For each DID translation Table entry (1-2000), specify the source of music to be used for DID trunks (0=IC/MOH port, 1=BGM port, 2=ACI port).

22-11-10: **DID Translation Table Number Conversion - ACI Music Source Port**
   For each DID translation Table entry (1-2000), if item 2 is selected in 22-11-09, specify the port to be used for the source of music heard on DID trunks.

33-01-01: **ACI Port Type Setup**
   Set each ACI software port for input (1) or input (2). Use input ports for Music on Hold sources.

**• Related Features**

- **Single Line Telephones**
  Single line telephones cannot change the Music on Hold tone
• Operation

To change the Music on Hold tone:
1. Press a SPK key.
2. Dial 881.
3. Dial Music on Hold tone code:
   - 00 No Tone (Silence)
   - 01 MOH tone
4. Press SPK to hang up.

Service code 881 will change the music on hold tone for any call that is set to use Program 10-04-01 as the music on hold source. When Program 10-04-01 is not set as the MOH source then the music on hold tone played to the held caller is shown below.

<table>

</tbody>
</table>
Name Storing

• Description

Extensions and trunks can have names instead of just circuit numbers. These names show on a system phone’s display when the user places or answers calls. Extension and trunk names make it easier to identify callers. The user does not have to refer to a directory when processing calls. A name can be up to 12 digits long, consisting of alphanumeric characters, punctuation marks and spaces.

Conditions

Although you can setup up to 12 characters for the name there will be certain displays where all 12 cannot be displayed, in this case the name will be truncated. Try to keep names to 8 characters or less, this will prevent the names being truncated on the display.

Default Setting

Enabled.

• Programming

14-01-01: Basic Trunk Data Setup - Trunk Name
Program names for system trunks.

15-01-01: Basic Extension Data Setup - Extension Name
Program name for system extensions (up to 12 characters).

15-07-01: Programmable Function Keys
Assign an Extension Name Change key (55) to extensions:

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-09-02: Class of Service Options (Call Service) - Trunk Name Display, Incoming
In an extension’s Class of Service, enable (1) or disable (0) the displaying of a trunk’s name/ number when the trunk is ringing.

20-13-21: Class of Service Options (Supplementary Service) - Extension Name
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to program their name.

• Related Features

• Single Line Telephones
  Analogue extensions cannot program names.

• Operation

To program an extension’s name:

1. Press a SPK key.
2. Dial 800
   OR
   Press Extension Name Change key (PGM 15-07 or SC 851: 55).
3. Enter the extension number to be named.
4. Enter name (see below).

Your name can be up to 12 digits maximum.

5. Press HOLD.

<table>
<thead>
<tr>
<th>Use this keypad digit ...</th>
<th>When you want to ...</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Enter characters: 1 @ [ ¥ ] ^ _ ' {</td>

<td>0</td>
<td>Enter characters: 0 ! * # $ % &amp; ' ( )</td>
</tr>
<tr>
<td>*</td>
<td>Enter characters: * + , - . / : ; &lt; = &gt; ?</td>
</tr>
<tr>
<td>#</td>
<td># = Accepts an entry (only required if two letters on the same key are needed - ex: STA). Pressing # again = Space.</td>
</tr>
</tbody>
</table>

DND/CONF Clear the character entry one character at a time.

6. Press SPK to hang up.
Night Service

• Description

Night Service lets system users activate one of the Night Service modes. Night Service redirects calls to their night mode destination, as determined by Assigned and Universal Night Answer programming. The system allows Night Service to be enabled for each Night Service group (1–4), allowing each group to determine when their calls should switch modes. A user typically activates Night Service after normal working hours, when most employees are unavailable to answer calls. The system also provides external contacts to enable Night Service.

There are eight Night Service modes:
- Day 1 / Day 2 Modes - for normal working hours
- Night 1 / Night 2 Modes - after hours (usually evening)
- Midnight 1 / Midnight 2 Modes - late at night to early in the morning
- Rest 1 / Rest 2 Modes - interval usually used for lunch

Assigned Night Answer (ANA)

With Assigned Night Answer, Night Service has calls ring extensions directly. Assigned Night Answer provides an answering point for Night Service calls. For certain applications, this may be more appropriate than Universal Night Answer. For example, you could program trunks to ring the security station telephone during off hours.

Universal Night Answer (UNA)

Universal Night Answer makes incoming calls ring over the External Paging speakers. With UNA, an employee can go to a telephone and press the flashing line key or use “Universal Answer” to pick up the call. For more on setting up Universal Answer, turn to the “Central Office Calls, Answering” feature.

You may also be able to use Transfer to UNA. An extension user can Transfer their call to UNA (i.e., External Paging at night). Once transferred, the call will ring the External Paging speakers like any other UNA call and can be picked up at any extension. You can also set up Transfer to UNA through the VRS. This lets outside callers, answered by the VRS, dial a code to have their call ring External Paging.

Automatic Night Service

The system will allow or deny Automatic Night Service based on the extension’s class of service programming. If allowed, the calls will then route according to the service patterns programmed.

Conditions

A. The following programs are affected by Night Mode:

<table>
<thead>
<tr>
<th>Program</th>
<th>15-06</th>
<th>15-09</th>
<th>15-11</th>
<th>20-06</th>
<th>21-02</th>
<th>21-04</th>
</tr>
</thead>
<tbody>
<tr>
<td>22-05</td>
<td>22-07</td>
<td>22-08</td>
<td>22-12</td>
<td>22-13</td>
<td>23-03</td>
<td></td>
</tr>
<tr>
<td>25-04</td>
<td>25-05</td>
<td>25-08</td>
<td>25-09</td>
<td>25-10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>34-02</td>
<td>34-03</td>
<td>34-04</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Almost all features are affected by Night Mode except for the following:

- Flexible System Numbering
- SMDR
- Volume Control

**Default Setting**

System is always in the Day Mode.

Automatic Night Mode switching is disabled (Program 12-01-02=0). Manual Night mode switching is enabled on the system (Program 12-01-01=1) but disabled in the telephones Class of Service (Program 20-07-01=0).

**Programming**

11-10-01: Service Code Setup (for System Administrator) - Day / Night Mode Switching
Customize the service code (818) to be used for day/night mode switching.

11-10-12: Service Code Setup (for System Administrator) – Night Mode Switching (Other Groups)
Assign a service code Night Mode Switching of department groups other than your own (default: 718).

12-01-01: Night Mode Function Setup - Manual Night Service Enable
Allow (1) or prevent (0) Department Group extension members from activating Night Service.

12-01-02: Night Mode Function Setup - Automatic Night Service Enabled
Enable (1) or disable (0) Automatic Night Service for the system. Make sure to set the Service Patterns in 12-02, 12-03, and 12-04.

12-02-01: Automatic Night Service Patterns
Configure the Automatic Night Service patterns. Pattern 1 should begin at 00:00 (midnight). Make sure to include the mode information for each time period as the system assigns the Day Mode (0) to all time periods not assigned to modes 1-3.

12-03-01: Weekly Night Service Switching
Assign one of the ten Automatic Night Service patterns programmed in 12-02 to each day of the week.

12-04-01: Holiday Night Service Switching
Assign one of the ten Automatic Night Service patterns to holidays.

12-05-01: Night Mode Group Assignment for Extensions
Assign a Day/Night Mode Group (1-4) for each extension.

12-06-01: Night Mode Group Assignment for Trunks
Assign a Day/Night Mode Group (1-4) for each trunk port (1-51).

12-07-01: Text Data for Night Mode
Create an original text message for each day/night mode group (1-4) which will be displayed on an LCD of system phone telephone in each Night Mode.

14-07-01: Trunk Access Map Setup
To allow for UNA answering, set up the Trunk Access Maps (1-51). For UNA, extension must have incoming access to trunk ringing the External Paging speakers.

15-06-01: Trunk Access Map for Extensions
For UNA answering, assign Trunk Access Maps (1-51) to extensions. Make one entry for each Night Service mode.

15-07-01: Programmable Function Keys
Assign Night Service function keys (09) to extensions and set the key for the proper mode (Day, Night, Rest, etc.).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-07-01: Class of Service Options (Administrator Level) - Manual Night Mode Switching
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to manually switch the Night Mode (Service Code 818).

22-04-01: Incoming Extension Ring Group Assignment
To have trunks ring extension during the different Night Service modes (for ANA), assign extensions to Ring Groups (1-25). For each extension in the Ring Group, indicate in Program 22-06 if trunk should ring (1) or not ring (0).

22-05-01: Incoming Trunk Ring Group Assignment
To have trunks ring extensions for ANA, assign trunks to Ring Groups. You make a different entry for each Night Service mode.

22-08-01: DIL/IRG No Answer Destination
If a Universal Answer call rings longer than the DIL No Answer Time (Program 22-01-04), it routes to the Ring Group specified in this option (Ring Group (1-25), the VRS, or DSPDB Voice Mail (101)).

31-05-01: Universal Night Answer
For each Night Service Mode, assign which trunks should ring which External Paging Zones.

• Related Features
  • Central Office Calls, Answering and Placing/Ring Groups
    There are separate Access Map and Ring Group programming entries for each Night Service mode (Day 1, Night 1, Midnight 1, Rest 1, Day 2, Night 2, Midnight 2, Rest 2). Also, “Universal Answer” allows an extension user to pick up a UNA call.
  • Paging, External
    With Universal Night Answer, outside calls can ring External Paging Zones.
  • Programmable Function Keys
    Function keys simplify activating Night Service.
  • Voice Response System (VRS)
Using the service code defined in Program 11-15-09, a caller listening to the VRS message can have the ability to transfer their call and have it ring the external page. The code the caller would dial is defined in Program 25-06-02.

• **Operation**

  **To activate Night Service by Service codes:**
  1. 1. At system phone, press a SPK key.
      OR
      At single line telephone, lift handset.
  2. Dial 818.
  3. Dial Night Service code:
      1 Day 1 mode
      2 Night 1 mode
      3 Midnight 1 mode
      4 Rest 1 mode
      5 Day 2 mode
      6 Night 2 mode
      7 Midnight 2 mode
      8 Rest 2 mode
  4. Press SPK to hang up.

  **To activate Night Service by using programmable keys:**
  1. Press Night Service key (PGM 15-07 or SC 851: 09) + Mode code number (below).
      0 Toggle Day 1/Night 1 mode
      1 Day 1 mode
      2 Night 1 mode
      3 Midnight 1 mode
      4 Rest 1 mode
      5 Day 2 mode
      6 Night 2 mode
      7 Midnight 2 mode
      8 Rest 2 mode

  **To transfer a call to the Universal Night Answer External Page zones:**
  1. Place the CO call on hold and dial the Transfer to Trunk Ring Group code.
      You will hear a confirmation tone.
  2. Hang up.
      The call rings over the External Paging, enabling anyone to answer the call.

  **To activate Night Service for Other Groups**
  1. At system phone, press the CALL key.
      OR
      At single line telephone, lift handset.
  2. Dial 718.
  3. Dial group number (1-4).
  4. Dial Night Service code:
      1 - Day 1 mode
      2 - Night 1 mode
      3 - Midnight 1 mode
      4 - Rest 1 mode
      5 - Day 2 mode
5. Press SPK to hang up.

6. Night 2 mode
7. Midnight 2 mode
8. Rest 2 mode
Off Hook Signalling

• Description

When a user calls an extension busy on a call, they can send an off hook signal through the handset and through the telephone’s speaker indicating they are trying to get through. The signal is an off hook ringing over the idle (second) line appearance. Off Hook Signalling helps important callers get through, without waiting in line for the called extension to become free. The system provides the following Off Hook Signalling options:

- Called Extension Block
  The called extension’s Class of Service may block incoming Off Hook Signalling attempts. This is beneficial to users that don’t want interruptions while on a call.

- Automatic Signalling
  Calling a busy extension automatically initiates Off Hook Signalling. This option is useful to receptionists, operators and others that must quickly process calls. This is set in the called extension’s Class of Service.

- Manual Signalling
  After reaching a busy extension, manual signalling gives the caller the choice of using Off Hook Signalling or activating other features. Extension’s without automatic signalling have manual signalling. The users can dial a service code or press a Programmable Function Key to send Off Hook Signalling to the called phone.

- Selectable Off Hook Signalling Mode
  The Off Hook Signal can be muted ringing, no off hook ringing, a single beep in the handset, a beep in the speaker, or a beep in the handset - based on the caller’s programming.

- Off Hook Ringing
  Use this option to enable or disable an extension’s Off Hook Signalling for incoming calls (DID, trunk). If enabled, Off Hook Signalling occurs normally. If disabled, calls queue behind the extension’s busy line appearance and the user gets no Off Hook Signalling indication. The second line appearance stays idle. The caller hears ringback tone while their call waits. This is set in the called extension’s Class of Service.

- DID Call Waiting
  An extension can optionally have DID calls camp on with Off Hook/Call Wait signalling, without Off Hook/Call Wait signalling or no signalling. This is set in the called extension’s Class of Service.

- Block Manual Off Hook Signals
  This Class of Service option enables/disables a busy extension’s ability to block off hook signals manually sent from a co-worker. If disabled (not blocked), callers can dial the service code (assigned in 11-16-04) at busy or busy/ring to signal the extension. If enabled (blocked), nothing happens when the caller dials the service code (assigned in 11-16-04) to off hook signal.

- Block Camp On
  If an extension has Block Camp On enabled, callers to the extension cannot dial the service code (assigned in 11-16-05) to Camp On after hearing busy
or busy/ring. If the extension has Block Camp On disabled, callers are not prevented from Dialling the service code (assigned in 11-16-05) to Camp on after hearing busy or busy/ring. This is set in the called extension’s Class of Service.

**Conditions**
None

**Default Setting**
Enabled

**• Programming**

11-12-03: Service Code Setup (for Service Access) - Override (Off Hook Signalling)
Assign a service code (809 by default) to be used for Off Hook Signalling Override.

11-16-04: Single Digit Service Code Setup - Intercom Off Hook Signalling
Assign a one-digit service code to be used for Off Hook Signalling.

15-02-12: System Telephone Basic Data Setup - Off Hook Ringing
For each extension, set Off Hook Ringing type: 0 (muted ring), 1 (no ring), 3 (beep in speaker), 4 (beep in handset).

15-07-01: Programming Function Keys
Assign a function key for Off Hook Signalling (code 33).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-13-05: Class of Service Options (Supplementary Service) - Off Hook Signalling Receive
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to send Off Hook Signalling to a busy extension.

20-13-06: Class of Service Options (Supplementary Service) - Automatic Off Hook Signalling
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to automatically receive Off Hook Signals while busy on a call.

20-18-06: Service Tone Timer - Call Waiting Tone Timer
Use this timer to set the interval between Off Hook Signalling alerts.

**• Related Features**

• **Call Waiting/Camp On and Callback**
An extension user cannot Camp On to a busy extension or leave a Callback if Off Hook Signalling has already gone through. Off Hook Signalling allows an extension to block a caller’s ability to dial 2 the service code (assigned in 11-16-05) to Camp On.

• **Direct Inward Dialling (DID)**
Refer to the DID feature for interaction between Off Hook Signalling and other DID programmed options.

• **Handsfree and Monitor**
You cannot send Off Hook Signals to an extension busy on a Handsfree (Speakerphone) call. The called extension’s idle CALL key flashes fast, with no ringing.

- **Hotline**
  The setting of Program 20-13-06 affects the BLF display for Hotline. Refer to this features for additional information.

- **Intercom**
  You cannot send Off Hook Signals to an extension that is already receiving a voice announcement.

- **Programmable Function Keys**
  Function keys simplify sending Off Hook Signals.

- **Single Line Telephones**
  Single line telephones can only send Off Hook Signals.

**Operation**

**To send Off Hook Signals to an extension busy on a call:**

*Your extension may send Off Hook Signals automatically.*

1. Press Off Hook Signalling key (PGM 15-07 or SC 851: 33).
   OR
1. Press SPK
2. Dial 809
   
   You hear ringback.
   
   *To have your call voice-announce, dial 1.*
Paging, External

• Description

With External Paging, a user can broadcast announcements over paging equipment connected to external Paging zones. When a user pages on one of these external zones, the system broadcasts the announcement over the speakers. Like Internal Paging, External Paging allows a user to locate another employee or make an announcement without calling each extension individually.

One external paging zone is provided as a standard feature of the system. If more than one external paging zone is required, a 2PGDU unit must be installed, providing an additional 2 zones. In addition, each external zone of the 2PGDU card can have an associated relay contact. When a user pages to a zone, the corresponding contact activates (closes). This provides for Paging amplifier control. Refer to the system hardware manual for additional details.

Combined Paging

Use Combined Paging when you want to simultaneously Page into an internal and corresponding external zone. For example, you can Page your company’s warehouse and outside loading dock at the same time. Combined Paging is available for Paging zones 1-6 and All Call. Refer to Paging, Internal for more on setting up Combined Paging. In addition, you can program a Function Key as a Combined Paging key. Using the External Page Function Key, when an All Call External Page Function Key is programmed, it will include both the external zones and the assigned internal zone(s). If the internal page zone is busy or there are no extensions in a page group, the announcement will be made on the external zones only.

Remove Paging Information from Display Phones

A Class of Service option is available in system programming to prevent display telephones from showing incoming paging information. This allows the system to save processor time and speed up system operation.

Conditions

A) One external paging zone is provided as a standard feature of the system. If more than one external paging zone is required, a 2PGDU unit must be installed in the system, providing an additional 2 zones.

B) With Combined Paging, the system will allow a page over just the external page zone if the internal zone is busy or if there are no extensions in a page group.

C) The paging speakers of the 2PGDU card are numbered 1-6, and the in-built paging speaker of the 308M unit is numbered 7.

Default Setting

In-built paging speaker assigned to External Paging Zone 1.

• Programming

10-03-01 : PCB Setup – Terminal Type (2PGDU)

Set the terminal type to 6:External Speaker. Assign port numbers in the following order to avoid duplication in Program 10-03-02:

Program 10-03-01 Port 3 = 9 (External Music Source), system assigns 10-03-02 = Port 1.

Program 10-03-01 Port 4 = 6 (External Speaker), system assigns 10-03-02 = Port 2.
10-03-02 : PCB Setup – Logical Port Number (2PGDU)
Assign port numbers for the devices assigned in Program 10-03-01. May be automatically assigned when Program 10-03-01 is set.

15-07-01: Programming Function Keys
Assign function keys for External Paging zones (19 + zone) and External All Call Page (20). If required, define a function key for a system phone to use the general purpose relay (50).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-13-29: Class of Service Options (Supplementary Service) - Paging Display
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to display incoming internal paging information on their display.

31-01-02: System Options for Internal/External Paging - Page Announcement Duration
Set the maximum allowable duration for a Paging announcement.

31-04-01: External Paging Zone Group zone.
Assign each External Paging Speaker (1-7) to an External Paging Group (1-6) used for accessing the zone.

31-05-01: Universal Night Answer over External Speaker
Assign Universal Night Answer ringing to each External Paging Speaker. For each trunk port, you make a separate entry for each External Paging zone (1-7).

31-06-01: External Speaker Control
Assign options for each External Paging Speaker (1-7): Splash Tone Before Page (Item 1), Splash Tone After Page (Item 2).

31-06-04: External Speaker Control - CODEC Transmit Gain Setup

31-08-01: BGM on External Paging
Assign the Background Music option for each External Paging Speaker (1-7). If enabled (1), the system will play Background Music over the zone when it is idle.

• Related Features
  • Central Office Calls, Placing
    A trunk port may be used for a talk back external page with the use of proper external paging equipment.
  • Night Service (Universal Night Answer)
    To have outside calls ring External Paging Zones at night, refer to the Night Service feature and Program 31-05.
  • Paging, Internal
    Internal Paging broadcasts announcements to extensions in programmed Internal Paging Zones.
  • Programmable Function Keys
    Function keys simplify External Paging operation.
• Operation

To Page into an external zone:

1. Press External Paging key (PGM 15-07 or SC 851: 19 + zone for External Paging zones or 20 for External All Call Paging).

OR

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 803 and the External Paging Zone code (1-6 or 0 for All Call).
   OR
   Dial 751 and the Combined Paging Zone code 1-6 (for Internal/External Zones 1-3) or 0 (for Internal/External All Call).

   *Display indicates the Combined Paging as an External Page.*

   If the Internal Page Zone is busy or if there are no extensions in a page group, the page may be announced as an External Page only.

**Paging, Internal**

**• Description**

Internal Paging lets extension users broadcast announcements to other system phone users. When a user makes a Zone Paging announcement, the announcement broadcasts to all idle extensions in the zone Dialled. With All Call Paging, the announcement broadcasts to all idle extensions programmed to receive All Call Paging. An extension can be a member of only one Internal Paging Zone. Like External Paging, Internal Paging allows a user to locate another employee or make an announcement without calling each extension individually.

**Combined Paging**

Use Combined Paging when you want to simultaneously Page into an internal and corresponding external zone. For example, you can Page your company’s warehouse and outside loading dock at the same time. Combined Paging is available for Paging zones 1-6 and All Call. Optionally, you can change the Combined Paging assignments. For example, you can associate External Paging Zone 1 with Internal Paging Zone 4. You can be able to program a Function Key as a Combined Paging key. When an All Call External Page Function Key is programmed, it will include both the external zones and the assigned internal zone(s). If the internal page zone is busy or there are no extensions in a page group, the announcement will be made on the external zones only.

**Remove Paging Information from Display Phones**

A Class of Service option is available in system programming to prevent display telephones from showing incoming internal paging information. This allows the system to save processor time and speed up system operation.

**Conditions**

- A. Internal Paging does not require a 2PGDU unit.
- B. You can assign any number of extensions to an Internal or All Call Paging Zone.
- C. A system must have at least one extension port idle in order to make an Internal Page. If no extension port is idle, the extension performing the Page will hear a busy signal.
- D. With Combined Paging, the system allows a page over just the external page zone if the internal zone is busy or if there are no extensions in a page group.

**Default Setting**

Enabled.

**• Programming**

**15-07-01: Programming Function Keys**

Assign function keys for Internal Paging Zones (code 21 + page zone) and Internal All Call Paging (code 22) (Internal Page Zones 0, 1-6, 00, 01-32.)

**20-06-01: Class of Service for Extensions**

Assign a Class Of Service (1-15) to an extension.

**20-13-29: Class of Service Options (Supplementary Service) - Paging Display**
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to display incoming internal paging information on their display.

### 31-01-01: System Options for Internal/External Paging - All Call Paging Zone Name
Assign a name to the All Call Internal Paging Zone. The name shows on the display of the telephone making the announcement.

### 31-01-02: System Options for Internal/External Paging - Page Announcement Duration
Set the maximum allowable duration (0-64800 seconds) for a Paging announcement.

### 31-02-01: Internal Paging Group Assignment - Internal Paging Group Number
Assign extensions to Internal Paging Zones. An extension must be assigned to a 2-digit zone in order to access any of the 2-digit zones (Internal Page Zones 0, 1-6, 00, 01-32).

### 31-02-02: Internal Paging Group Assignment - Internal All Call Paging Receiving
Allow (1) or prevent (0) All Call Internal Paging for each extension. If allowed, extension can make and receive All Call Internal Paging announcements. If prevented, extension can only make All Call Internal Paging announcements.

### 31-03-01: Internal Paging Group Settings - Internal Paging Group Name
Program names for the Internal Paging Zones.

### 31-03-02: Internal Paging Group Settings - Internal Paging Tone
For each Internal Paging Zone, have normal (0), muted (1) or no (2) Internal Paging alert tones. If enabled (0 or 1), extensions hear two beeps before Paging announcements. If disabled, the extensions hear the announcement without the beeps. Muted tones can occur only if the extension user sets the telephone volume control switch to medium or high (Internal Page Zones 0, 1-6, 00, 01-32).

### 31-07-01: Combined Paging Assignments
For each External Paging Zone (1-6 and 0 for All Call), assign a corresponding Internal Zone for Combined Paging.

#### Related Features
- **Meet Me Paging / Meet Me Paging Transfer**
  Preventing access to internal page also prevents these features.
- **Paging, External**
  An extension user can broadcast an announcement over an External Paging Zone.
- **Programmable Function Keys**
  Function keys simplify Internal Paging operation.

#### Operation
To make an Internal Page announcement:

**System Phone**
1. Press the zone’s Internal Paging key (PGM 15-07 or SC 851: 21 + 1-6 or 01-32 for zones, 22 for All Call).
   OR
1. Press a SPK key.
2. Dial 801 and the Paging Zone number (0-6 or 00-32).
   Dialling 0 or 00 calls All Call Internal Paging.
   OR
   Dial 751 and the Combined Paging Zone code 1-6 (for Internal/External Zones 1-6) or 0 (for Internal/External All Call).
   Display indicates the Combined Paging as an External Page.
   If the Internal Page Zone is busy or if there are no extensions in a page group, the page will be announced as an External Page only.
3. Make announcement.
4. Press SPK to hang up.

**Single Line Telephone**

1. Lift handset.
2. Dial 801 and the Paging Zone number (0-6 or 00-32).
   Dialling 0 or 00 calls All Call Internal Paging.
   Dial 751 and the Combined Paging Zone code 1-8 (for Internal/External Zones 1-6) or 0 (for Internal/External All Call).
3. Make announcement.
4. Hang up.
Park

• Description

Park places a call in a waiting state (called a Park Orbit) so that an extension user may pick it up. There are two types of Park: System and Personal. Use System Park when you want to have the call wait in a system orbit. Personal Park allows a user to Park a call at their extension so a co-worker can pick it up. After parking a call in orbit, a user can Page the person receiving the call and hang up. The paged party dials a code or presses a programmed Park key to pick up the call. With Park, it is not necessary to locate a person to handle their calls. A call parked for too long will recall the extension that initially parked it, however the call remains in the park orbit until it’s answered. There are 64 Park Orbits (1-64) available for use.

Extended Park

An extension’s Class of Service determines whether it will use the normal Park Orbit Recall time or the Extended Park Orbit Recall time. The timers are set up in system programming. When an extension with Extended Park Recall Class of Service option parks a call, it recalls after the Extended Park Orbit Recall time. When an extension with the Normal Park Orbit Recall Class of Service option parks a call, it recalls after the normal Park Orbit Recall time, however the call remains in the park orbit until it’s answered.

Conditions

A. An extension can park a call in any Park Orbit. However, an extension can only pick up a call Parked by a member of its own Park group (see Program 24-03).
B. If an extension is not allowed access to trunks in the Access Maps (Programs 14-07 and 15-06), calls in Park and on Hold can be blocked.

Default Setting

Enabled.

• Programming

15-07-01: Programming Function Keys
Assign a keys as a Park Orbit key (code *04 plus Park orbit number [01-64]).

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to extensions.

20-11-19: Class of Service Options (Hold/Transfer Service) - Normal/Extended Park
Determine whether an extension’s Class of Service should allow normal or extended Park (0=normal, 1=extended).

24-01-02: System Options for Hold - Hold Recall Callback Time
A call left parked too long recalls the extension that initially parked it for this interval.

24-01-06: System Options for Hold - Park Hold Time
Set the Park Hold Time (0-64800 seconds). A call left parked longer than this interval will recall the extension that initially parked it.

24-01-07: System Options for Hold - Extended Park Hold Time
Set the Extended Park Hold Time (0-64800 seconds). A call left parked longer than this interval will recall the extension that initially parked it.

24-03-01: Park Group
Assign an extension to a Park Group (01-64). An extension can only pick up a call Parked by a member of its own Park Group.

• Related Features
  • Hold
    A user can place a call in a temporary waiting state without putting it in orbit.
  • Programmable Function Keys
    Function keys simplify Park operation.

• Operation

To Park a call in a system orbit:

  You can Park Intercom or trunk calls.

  1. Press Park key (PGM 15-07 or SC 852: *04 + orbit).
     The Park key LED lights.
     If you hear busy tone, the orbit is busy. Try another orbit.
  2. Use Paging to announce call.
  3. Press SPK to hang up.
     If not picked up, the call will recall to you.
     OR

     1. At system phone, press HOLD.
        OR
        At a single line telephone, hookflash.
        OR
     2. Dial 831 and the Park orbit (01-64).
        If you hear busy tone, the orbit is busy. Try another orbit.
  3. Use Paging to announce call.
  4. Press SPK to hang up.
     If not picked up, the call will recall to you.

Note: The parked call recalls after the Park Hold Time (Program 24-01-06). The call rings the extension to which it recalled for the Hold Recall Callback Time (Program 24-01-02). The call then goes on Hold for the Park Hold Time - then recalls again for the Hold Recall Callback Time. The call continues to cycle between Hold and recall until the extension user answers the call or the outside party hangs up. This applies to extended calls only.

To pick up a parked call:

  1. Lift handset.
  2. Press Park key (PGM 15-07 or SC 852: *04 + orbit).
     OR
     1. At system phone, press a SPK key.
        OR
        At single line telephone, lift handset.
     2. Dial 861 and the Park orbit (1-64).

To park a call at your extension:

  1. Do not hang up.
  2. Press HOLD and dial 773.
At a SLT, hookflash instead of pressing HOLD.

3. Page your co-worker to pick up the call.

4. Press SPK to hang up (or hang up at SLT).
   
   If not picked up, the call will recall to you until either the call is answered or the caller hangs up.

To pick up a call parked at an extension (yours or a co-worker’s):

1. If parked at your extension:
   Press a SPK key and dial 773.
   
   At an SLT, skip pressing CALL.
   
   OR
   
   If parked at a co-worker’s extension
   Press a SPK key dial 715 plus the co-worker’s extension number.
   
   At an SLT, skip pressing CALL.
PBX Compatibility

• Description

You can connect your phone system trunks to Centrex/PBX lines, rather than to telco trunk circuits. This makes the trunk inputs into the system Single Line type compatible Centrex/PBX extensions, rather than telco circuits. PBX Compatibility lets the system be a node (i.e., satellite) in a larger private telephone network. To place outside calls when the system is behind a PBX, phone system users must first dial the PBX’s trunk access code (usually 0).

The system provides the following PBX Compatibility options:

• PBX Trunk Access Code Screening
  The system can monitor the numbers users dial and screen for PBX trunk access codes. The system can screen for up to 4 groups of trunk access codes. The codes can be one or two digits long, consisting of the digits 0-9, # and *. (You use Line Key 1 as a wild card entry.)

• PBX Trunk Toll Restriction
  The system can provide the Toll Restriction for the PBX trunk, or restriction can be handled solely by the connected PBX. If the phone system provides the restriction, it restricts the digits Dialled after the PBX access code.

• PBX Call Restriction
  When the phone system does the Toll Restriction, it can further restrict users from Dialling PBX extensions. In this case, the only valid numbers are those Dialled after the PBX trunk access code. The only PBX facility phone system users can access are the PBX’s outside trunks.

• Automatic Pause
  The system automatically pauses when it sees a PBX trunk access code during manual Dialling, Abbreviated Dialling, Last Number Redial, Repeat Redial and Save Number Dialled. This gives the connected PBX time to set up its trunk circuits.

Conditions

When using Account Codes, do not use an asterisk within a PBX access code. Otherwise, after the *, the trunk would stop sending digits to the central office.

Default Setting

Disabled.

• Programming

  14-01-08: Basic Trunk Data Setup - Toll Restriction
  For each PBX trunk port, enable (0) or disable (1) Toll Restriction.

  14-04-01: Behind PBX Setup - Behind PBX
  For each PBX trunk port, enter 1. You make a separate entry for each Night Service mode.

  21-04-01: Toll Restriction Class
  Assign a Toll Restriction Class (1-15) to each extension.
21-05-12: Toll Restriction Class - PBX Call Restriction
For each Toll Restriction Class, enter 1 to restrict calls on the PBX trunk to outside calls only. Enter 0 to allow users to dial PBX extensions.

21-06-08: Toll Restriction Table Data Setup - PBX Access Code
Enter the system PBX access codes. The system can have up to 4 groups of codes. A code can be one or two digits long. Valid entries are 0-9, # and *. Use Line Key 1 as a "don't care" digit. If using Account Codes, do not use the * within the PBX Access Code.

81-01-14: Analogue Trunk Initial Data Setup - Hookflash 1
If the CONF key is set for transfer (in Program15-02-05), use this program to set the duration of the flash that occurs when a user presses the CONF key.

• Related Features
  • Account Codes
    When using Account Codes, do not use an asterisk within a PBX access code. Otherwise, after the *, the trunk would stop sending digits to the central office.
  • Abbreviated Dialling
    The system automatically pauses after it finds a PBX access code in an Abbreviated dialling bin.
    If Abbreviated dialling routes a call to a PBX trunk, it does not automatically insert a PBX access code. It outdials the digits just as they are stored.
  • Central Office Calls, Answering/ Ring Groups
    Users answer incoming calls on PBX trunks just like other trunks. All of the relevant access and Ring Group programming applies. Refer to these features for more details.
  • Central Office Calls, Placing
    Except for dialling the PBX access code, users place calls on PBX trunks just like other trunks. All of the relevant access programming applies. Refer to the Central Office Calls Placing feature for more details.
  • Direct Inward Lines
    You can have DILs route from the connected PBX. Users can access these trunks for outgoing PBX calls. All PBX Compatibility restrictions and programming apply.
  • Direct Inward System Access
    You can program incoming DISA trunks to be outgoing PBX trunks. All PBX Compatibility restrictions and programming apply.
  • Flash
    Flash may allow access to certain PBX features - like Transfer. Make sure you program Flash for compatibility with the connected PBX
  • Toll Restriction
    PBX trunks can follow normal system Toll Restriction.
  • Trunk Groups and Trunk Group Routing
  • Users can get outbound access to PBX trunks through Trunk Groups and/or Trunk Group Routing. All PBX Compatibility restrictions and programming apply.
    If the system routes a call to a PBX trunk, it does not automatically insert the PBX access code. It outdials the call just as the user dialled it.
• Operation

To place a call over a PBX trunk:

1. At system phone, press a SPK key and dial 804.
   OR
   At single line telephone, lift handset and dial 804.
2. Dial PBX trunk group number (1-9, 01-32 or 01-25).
3. Dial PBX access code and number
   OR
   1. (System Phone only) Press PBX trunk group key (PGM 15-07 or SC 852: *02 + group).
   2. Dial PBX access code and number.
      OR
   1. At system phone, press a SPK key and dial 0.
      OR
      At single line telephone, lift handset and dial 0.
   2. Dial PBX access code and number.
      OR
   1. At system phone, press a SPK key.
      OR
      At single line telephone, Lift handset.
   2. Dial 805.
3. Dial PBX trunk number (e.g., 05 for line 5).
4. Dial PBX access code and number.
   OR
   1. Press PBX trunk key (PGM 15-07 or SC 851: 1 to 51).
   2. Dial PBX access code and number.

Note: In all cases above, Toll Restriction may prevent your call.
Prime Line Selection

• Description

Prime Line Selection allows an extension user to place or answer a call over a specific trunk by just lifting the handset. The user does not have to first press keys or dial codes. This simplifies handling calls on a frequently used trunk.

A Prime Line is effectively a single exchange line placed into its own trunk group for outgoing access and its own ring group for incoming ringing.

Prime Line Selection has the following two modes of operation:

- Outgoing Prime Line Preference
  Lifting the handset seizes the Prime Line. Outgoing Prime Line Preference would help a telemarketer who always needs a free line to call prospective clients. The telemarketer just lifts the handset and the Prime Line is always available. (Outgoing Prime Line Preference may be affected by Incoming Prime Line Preference.)

- Incoming Prime Line Preference
  When the Prime Line rings the extension, lifting the handset answers the call. Incoming Prime Line Preference could benefit the Service Department dispatcher who must quickly answer customer’s service calls and then dispatch repair technicians. The dispatcher would have the assurance than whenever a customer calls in, the dispatcher just lifts the handset get their call. (Incoming Prime Line Preference can optionally seize an idle line appearance.)

Conditions
None

Default Setting
Disabled.

• Programming

14-05-01: Trunk Groups
Assign Prime Line to a separate trunk group for outgoing Prime Line selection. (Also see 14-06 and 21-02.)

14-06-01: Trunk Group Routing
Set up outbound route for trunk group that contains the Prime Line. (Also see 14-05 and 21-02.)

14-07-01: Trunk Access Map Setup
For outgoing Prime Line selection, assign each Prime Line trunk to a different Access Map and deny outbound access to all trunks except the Prime Line trunk (1-51).

15-01-02: Basic Extension Data Setup - Outgoing Trunk Line Preference
Enter 1 for this option so extension user seizes Prime Line when they lift the handset.

15-02-10: System Telephone Basic Data Setup - Ringing Line Preference for Trunk Calls appearance.
Enter 1 if lifting the handset should answer ringing Prime Line; enter 0 to seize idle line appearance.

**15-06-01: Trunk Access Map for Extensions**
Set assignment so extension(s) can have access to Prime Line. Deny outbound access to extensions that should not have Prime Line.

**21-02-01: Trunk Group Routing for Extensions**
Assign extension(s) to a Prime Line route (1-25) for outgoing Prime Line access.

**22-01-01: System Options for Incoming Calls - Incoming Call Priority**
Set incoming Prime Line preference. Enter 1 to answer ringing Prime Line; enter 0 to answer ringing Intercom call.

**22-04-01: Incoming Extension Ring Group Assignment**
Assign extension(s) to a ring group (1-25) that consists of the Prime Line.

**22-05-01: Incoming Trunk Ring Group Assignment**
Assign a Prime Line trunk to its own ring group (1-25).

**Related Features**
- **Central Office Calls, Placing**
  Other programmed options for outgoing calls also affect a Prime Line.
- **Direct Inward Lines/Direct Inward System Access**
  DILs and DISA calls also ring extensions directly, even if not allowed in ring group programming.
- **Line Preference**
  Prime Line Selection directly interacts with Line Preference.
- **Voice Mail**
  If the DSPDB Voice Mail is installed, calls can be directed to the Voice Mail Auto Attendant ring group (101).

**Operation**

To place a call on your Prime Line:
1. Lift handset.
   
   *You hear dial tone on your Prime Line.*

To answer a call on your Prime Line:
1. Lift handset.
   
   *Depending on your Line Preference programming, you’ll either answer the Prime Line or get dial tone on the idle line appearance.*
**Private Line**

- **Description**

A Private Line is a trunk reserved for a system phone for placing and answering calls. A user with a Private Line always knows when important calls are for them. Additionally, the user has their own trunk for placing calls that is not available to others in the system.

A Private Line is one that is assigned to a single telephone, no other phones have access to the line.

- **Incoming only**
  The system phone has a Private Line only for incoming calls. The user cannot place calls on the Private Line.

- **Outgoing only**
  The system phone has a Private Line only for outgoing calls. The Private Line does not ring for incoming calls.

- **Both ways**
  The system phone has a Private Line for both incoming and outgoing calls.

**Conditions**

None

**Default Setting**

Disabled.

- **Programming**

  **14-07-01: Trunk Access Map Setup**
  Assign Private Line to the Private Line Access Map (1-51) (see Program 15-06 below). Use option 5 for Incoming, option 7 for Both Ways and option 4 for Outgoing. In all other Access Maps, give option 3 to the Private Line.

  **15-06-01: Trunk Access Map for Extensions**
  Assign extension to have Private Line to an unused “Private Line” Access Map.

  **15-07-01: Programming Function Keys**
  Make sure extension has a line key (e.g., 012) for the Private Line.

  **22-02-01: Incoming Call Trunk Setup**
  Set the Trunk Service Type to 4 if routing unanswered Private Lines to voice mail or 0 if not routing to voice mail.

  **22-04-01: Incoming Extension Ring Group Assignment**
  Assign extension to Private Line’s ring group. Set the ringing in Program 22-06 - use option 1 for Incoming or Both Ways Private Lines. Use option 0 for Outgoing Private Lines. Do not assign any other extensions to the Private Line ring group.

  **22-05-01: Incoming Trunk Ring Group Assignment**
  Assign Private Line to an unused “Private Line” ring group (1-25) (i.e., a ring group just for the Private Line).
22-07-01: DIL Assignment
If routing unanswered Private Lines to voice mail, assign DILs to the extensions.

• Related Features
  • Call Forwarding
    Private Lines do not follow Call Forwarding.
  • Central Office Calls, Placing
    Other programmed options for outgoing calls also affect a Prime Line.
  • Line Preference
    An extension user can have Line Preference options applied to their Private Line.
  • Prime Line Selection
    A Private Line can also be a Prime Line.
  • Programmable Function Keys
    You should always program a line key for each Private Line.
  • Single Line Telephones
    Private Lines are not available on single line telephones.
  • Toll Restriction
    Private Lines follow normal Toll Restriction.
  • Transfer
    An extension user can Transfer their Private Line. Since other users have hold access (see Programming), the destination can answer the transferred Private Line and place it on Hold.
  • Voice Mail
    If the DSPDB Voice Mail is installed, calls can be directed to the Voice Mail Auto Attendant ring group (101).

• Operation

To place a call on your Private Line:
  1. Press Private Line key.
  2. Dial number.

To answer a call on your Private Line:
  1. Press Private Line key or lift the handset.
Programmable Function Keys

- Description

Each system phone has Programmable Function Keys. Programmable Function Keys simplify placing calls, answering calls and using certain features. You can customize the function of a system phone’s programmable keys from your administration telephone, or the extension user can do it themselves. Depending on your telephone, you can have either 6 or 12 Programmable Function Keys, plus 10 additional keys (speed dial keys).

Note. The 22 keys (12+10) are ALL programmable function keys, they are separated into two groups (1-12 and 1-10) on the phone because the speed dial keys do not have lamps on the Topaz Talk phone.

When programming the keys within Topaz configuration mode with Program 15-07-01 remember that the keys are numbered 1 to 22.

Keys 1-12 in Program 15-07-01 are function keys 1-12 on the phone.

Keys 13-22 in Program 15-07-01 are speed dial keys 1-10 on the phone.
12 Programmable Function Keys
With dual colour lamps.

10 Programmable Function Keys
(Speed Dial Keys).
With dual colour lamps.

12 Programmable Function Keys
With dual colour lamps.

10 Programmable Function Keys
(Speed Dial Keys).
No lamps.
Conditions

A. When a key is programmed using service code 852, that key cannot be pro-
grammed with a function using the 851 code until the key is undefined (000). For
example with a Park Key programmed by Dialling 852 + *04 must be undefined
by Dialling 000 before it can be programmed as a Call Forward key by Dialling
851 + 16.

B. Using Program 92-01 to copy a system phone’s Programmable Function Keys will
copy all the keys whether they exist on the phone to which the programming is
being copied. This may cause confusion when trying to define a key which is
already defined but which doesn’t exist on the phone (will display as “DUPLICATE
DATA”. It is recommend to either clear these non-existent keys or to only copy
from an extension which has the same or fewer numbers of keys than the exten-
sion to which the programming is being copied.

Default Setting

The first 12 keys on a telephone are assigned by default as line keys (e.g., key 1 = line
01). Key 22 on each telephone is assigned as a both way loop key (type *05 + 0).

• Programming

15-07-01: Programming Function Keys
Assign the functions of a system phone’s Programmable Function Keys.
Refer to Tables 4 and 5 at the beginning of this manual.

20-06-01: Class of Service for Extensions
Assign Class of Service (1-15) to extensions.

20-07-10: Class of Service Options (Administrator Level) - Programmable
Function Key
In an extension’s Class of Service, enable (1) or disable (0) an exten-
sion’s ability to program their own function keys.

Note: When programming a feature as a Programmable Function Key, refer to the
feature’s description for additional programming options.

• Related Features

• Abbreviated Dialling
Abbreviated dialling and One-Touch Calling also offer quick access to calls and
features.

• Direct Station Selection (DSS) Console
Programming a 64-button console requires separate programming. Refer to this
feature for more details.

• 24 Button Add on Console

The 24 button add on console can be attached to any Topaz Vision phone and will
provide 24 additional programmable function keys.

The keys can be programmed by the user with service codes 851 or 852 in exactly the
same way as the 22 function keys on the phone.

They can also be programmed within Topaz Configuration Mode using program 15-07-
01. The add on console uses keys 23 to 46 within program 15-07-01.
• Operation

To change the function of a General Programmable Function Key:
1. Press CALL key.
2. Dial 851.
3. Press the key you want to program.
4. Enter the 2-digit key function, followed by any additional information required by the function selected.
5. Press HOLD.
6. Press SPK key.

Available functions are 00-99 (refer to chart SC 851 below) and line keys 01-51. To clear a key, enter 00.

To change the function of an Appearance Programmable Function Key:
1. Press a SPK key.
2. Dial 852.
3. Press the key you want to program.
4. Enter the 3-digit key function and any additional information needed for the key.
5. Press the SPK key.

Available functions are *00-*99 (refer to chart SC 852 below) and line keys 01-51. To clear a key, enter 000.

When a key is programmed using service code 852, that key cannot be programmed with a function using the 851 code until the key is undefined (000). For example with a Park Key programmed by dialling 852 + *04 must be undefined by dialling 000 before it can be programmed as a Call Forward key by dialling 851 + 16.

To check the function of a Programmable Function Key:
1. Press CHECK.
Press the programmable key.
The programmed function displays.

To Program a DSS/One-Touch Key:
1. Press CALL.
2. Dial 851.
3. Press the Function Key to program.
4. Dial Extension Number, or 0 + Outside Number.
5. Press HOLD.
6. Press SPK.

Reason of Transfer Display

• Description

The display at a system phone can show the reason that a call is ringing when it has been diverted/forwarded to them.

The reason can be call forward, DND or Absence message at the original target phone. The secondary target phone is then aware of the state of the original phone user and can answer the call appropriately.

Conditions

This feature is available at the XN120 Vision phone only.

The feature will operate for DDI calls, DIL calls and DUD/DISA calls.

It will not operate for calls ring within a ring group.

Default Setting

Disabled.

• Programming

20-13-23 : Display reason of transfer.

• Operation

The operation is automatic.

The display at the secondary target phone will show the following reasons the call has transferred to their phone.

<table>
<thead>
<tr>
<th>Original extension has this set</th>
<th>At the secondary target extension the display will show</th>
</tr>
</thead>

Repeat Redial

• Description

If a system phone user places a trunk call that is busy or unanswered, they can have Repeat Redial try it again later on. The user doesn’t continually have to try the number again -- hoping it will go through. Repeat Redial automatically retries it until the called party answers (the number of retries is based on system programming).

Conditions

Lifting the handset will cancel Repeat Redial.

Default Setting

Enabled.

• Programming

15-07-01: Programming Function Keys
Assign a function key for Repeat Redial (code 29).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-08-07: Class of Service Options (Outgoing Call Service) - Repeat Redial
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to use Repeat Redial.

21-08-01: Repeat Dial Setup - Repeat Redial Count
Set how many times Repeat Redial will automatically repeat if the call does not go through.

21-08-02: Repeat Dial Setup - Repeat Redial Interval Time
Set the interval between Repeat Redial attempts (0-64800 seconds).

21-08-03: Repeat Dial Setup - Repeat Dial Calling Timer
Set how long the system waits (0-64800 seconds) for the called party to answer after a Repeat Redial. If the called party doesn’t answer within this interval, the system hangs up and tries again (after the Repeat Redial Interval Time). For unanswered calls, the total time between retries in the sum of Items 21-08-02 and 21-08-03.

• Related Features

• Automatic Route Selection
  For systems with Automatic Route Selection, ARS selects the trunk for the Repeat Redial call.

• Central Office Calls, Placing
  Other programmed options for outgoing calls can affect how a call is placed. Check or program these options as needed.

• Last Number Redial/Save Number Dialled
  An extension user can quickly redial their last call.

• Single Line Telephones
  Single line telephones cannot use Repeat Redial.
• Operation

To use Repeat Redial (if the outside party you call is unavailable or busy):

1. Place trunk call.
   
   *Listen for busy tone or ring-no-answer.*

2. Press DC + LND.
   
   OR

   Press Repeat Redial Key (PGM 15-07 or SC 851: 29).

   *Your Repeat Redial key flashes while you wait for the system to redial.*

3. Press SPK to hang up.

   *The system periodically redials the call.*

4. Lift handset when called party answers.

To cancel Repeat Redial:

1. Press DC.

2. Press LND.

   OR

1. Press Repeat Redial Key (PGM 15-07 or SC 851: 29).

   *See also Last Number Redial.*
Ring Groups

• Description

Ring Groups determine how trunks ring extensions. Generally, trunks ring extension’s only if Ring Group programming allows. For example, to make a trunk ring an extension:

- Assign the trunk and the extension to the same Ring Group
- In the extension’s Ring Group programming, assign ringing for the trunk.

Any number of extensions and trunks can be in a specific group. The system allows up to 25 Ring Groups.

If an extension has a line key for the trunk, Ring Group calls ring the line key. If the extension doesn’t have a line key, the trunk rings the line appearance key. If an extension has a key for a trunk that is not in its ring group, the trunk follows Access Map programming.

Conditions

DIL trunks disregard ring group programming until DIL overflow.

Default Setting

All trunks are assigned in Ring Group 1, the first 16 extensions ring for all trunk calls and all other extensions only flash.

• Programming

15-07-01: Programming Function Keys
Assign function keys as line keys (codes 1-51).

22-04-01: Incoming Extension Ring Group Assignment
Assign extensions to ring groups (1-25).

22-05-01: Incoming Trunk Ring Group Assignment
Assign trunks to ring groups (1-25).

22-08-01: DIL/IRG No Answer Destination
For DIL Delayed Ringing, assign the DIL No Answer Ring Group. An unanswered DIL rings this group after the DIL No Answer Time (Program 22-01-04) expires. DIL Delayed Ringing can also reroute outside calls ringing a Ring Group (1-25), the VRS, or DSPDB Voice Mail (101).

22-12-01: DID Intercept Ring Group
For each DID Translation Table, assign the destination for DID Intercept. The destination can be a Ring Group (1-25), DSPDB voice mail (101), the operator (9), or the VRS. For each table, make a separate entry for each Night Service mode.

25-03-01: DID/DISA Transfer Ring Group With Incorrect Dialling
Set the transfer destination for each DISA and Automated Attendant (OPA) trunk. The destination can be a Ring Group or Voice Mail, or the VRS. Make a separate entry for each Night Service mode. With the VRS, an incorrect dialling transfer can also reroute outside calls to this destination. The system allows Ring Groups=(1-25), VRS=(15) or DSPDB Voice Mail=(101).

**Note:** For incoming calls, Ring Group programming (22-04/22-05) overrides Access Map programming (14-07/15-06).

**• Related Features**

- **Direct Inward Dial (DID) / Direct Inward System Access (DISA)/Voice Response System (VRS)**
  DID, DISA and VRS overflow options can be to a Ring Group.

- **Direct Inward Line (DIL)**
  DILs ring extensions without being in a Ring Group.

- **Night Service**
  Ring Group programming can be different for each Night Service mode.

- **Programmable Function Keys**
  Function keys simplify answering incoming calls.

- **Transfer**
  Transferring calls to a Ring Group using a service code forwards the call to the group defined in Program 22-05.

**• Operation**

Refer to Central Office Calls, Answering.
Ringdown Extension, Internal / External

• Description

With a Ringdown Extension, a user can call another extension, outside number, or Abbreviated Dialling number by just lifting the handset. The call automatically goes through - there is no need for the user to dial digits or press additional keys. Ringdown Extensions are frequently used for lobby phones, where the caller just lifts the handset to get the information desk or off-site Reservation Desk.

After the Ringdown Extension user lifts the handset, ringdown occurs after a programmable interval. Depending on the setting of this interval, the extension user may be able to place other calls before the ringdown goes through.

The system allows each extension in the system to have a Ringdown Extension. All extensions can share the same Dialling number, if desired.

Conditions

A. Ringdown extension has no effect on an extension's current (active) call.
B. The Ringdown Extension user must lift the handset for ringdown to work.

Default Setting

Disabled.

• Programming

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-08-09: Class of Service Options (Outgoing Call Service) - Hotline/Extension Ringdown
In an extension's Class of Service, enable (1) or disable (0) ringdown. If disabled in Class of Service, the settings in Program 21-11 below have no effect.

21-01-09: System Options for Outgoing Calls - Ringdown Extension Timer
After the user lifts the handset, the extension automatically calls the ringdown destination after this interval (0-64800 seconds). A setting of ‘0’ will immediately ring the programmed extension. Any other setting will delay the ringdown the number of seconds programmed.

21-11-01: Extension Ringdown (Hotline) Assignments
Program the ringdown (Hotline) source and destination (target) number, up to 24 digits (512 Hotline assignments). Remember to include the trunk access code (usually 0) in front of the number when dialling outside numbers. When programming Common Abbreviated Dialling numbers as the destination, the entry should be “853+bin number”.

• Related Features

• Abbreviated Dialling
Ringdown Extension can use Abbreviated dialling numbers (and follow their trunk routing) as the destination number.

• Call Forwarding
Ringdown Extension follows Call Forwarding. For example, the ringdown destination can forward their calls. When the Ringdown Extension user lifts the handset, ringdown automatically calls the extension to which calls are forwarded.

• **Call Waiting/Camp On, Callback and Off Hook Signalling**
  If the Ringdown Extension user hears busy tone when they lift the handset, they can Camp On to the destination, leave a Callback or activate Off Hook Signalling.

• **Do Not Disturb**
  The ringdown destination user can activate Do Not Disturb. When the Ringdown Extension user lifts the handset, they hear DND. If enabled, the Ringdown Extension user can override the destination’s DND.

• **Handsfree Answerback/Forced Intercom Ringing**
  If the destination extension has Handsfree Answerback enabled, the call will voice-announce. If the destination extension has Forced Intercom Ringing enabled, the call will ring.

• **Multiple Directory Numbers/Call Coverage Keys**
  A Multiple Directory Number key can be a ringdown destination. This would allow a ‘front door’ key to be programmed on every extension.

**Operation**

To place a call if your extension has ringdown programmed:

1. Lift handset.
   
   *If you want to place a trunk call, press a line key before lifting the handset.*
   
   *Depending on the setting of your ringdown timer, you may be able to dial an Intercom call before your ringdown goes through.*
   
   *If the destination has Handsfree Answerback enabled, your call will voice announce.*
   
   *If the destination has Forced Intercom Ringing enabled, your call will ring.*

To bypass ringdown (if enabled for your system phone):

1. Do not lift handset.
2. Press a SPK key.
3. Place Intercom or trunk call.

To answer a call if you are another extension’s ringdown destination:

1. Speak toward phone to answer incoming voice-announcement.
   
   OR
   
   Lift handset to answer ringing Intercom call.
Room Monitor

• Description

Room Monitor lets an extension user listen to the sounds in a co-workers area. For example, the receptionist could listen for sounds in the warehouse when it's left unattended. To use Room Monitor, the initiating extension and the receiving extension must activate it.

When using System Phones for monitoring, an extension user can only Monitor one extension at a time. However, many extensions can Monitor the same extension at the same time.

With single line phones, multiple SLTs can be programmed to be monitored by the same SLT. However, only one SLT can monitor another SLT at a time.

CAUTION

The use of monitoring, recording or listening devices to eavesdrop, monitor, retrieve or record telephone conversations or other sounds activities, whether or not contemporaneous with its transmission may be illegal in certain circumstances under federal or state laws. Legal advice should be sought prior to implementing any practice that monitors or records any telephone conversation. *The Telecommunications (Interception) Act 1979* (Cth), *The Telecommunications Act 1997*, *The Privacy Act 1988* and State and Territory Listening Devices Legislation are all relevant. Some federal and state laws require some form of notification to all parties or require the consent of all parties to the telephone conversation, prior to monitoring or recording a telephone conversation. Some of these laws incorporate strict penalties. Section 6 of the Industry Guidelines recommend pre-recorded messages or verbal notification to alert callers that the calls may be monitored. Section 6 of the Industry Guidelines also make recommendations in relation to notifications in writing.

Conditions

A. Room Monitor is for listening only. It does not allow for conversation between the monitoring and monitored extensions.

B. An extension user cannot monitor an Attendant.

C. A system phone user cannot monitor a single line phone and a single line phone cannot monitor a system phone.

Default Setting

Disabled.

• Programming

15-07-01: Programming Function Keys

Assign a function key as a Room Monitor key (code 39) for both the extension being monitored and the extension initiating Room Monitor.

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-13-11: Class of Service Options (Supplementary Service) - Room Monitor, Initiating
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to initiate Room Monitor.

20-13-12: Class of Service Options (Supplementary Service) - Room Monitor, Extension
In an extension’s Class of Service, enable (1) or disable (0) an extension’s ability to be monitored.

• Related Features
  • Programmable Function Keys
    Room Monitor requires uniquely programmed function keys for system phones.

• Operation
  You must activate Room Monitor at the extension initiating the monitor and at the extension you want to monitor. You can only listen to one extension at a time.

System Phones:

To activate Room Monitor (at the initiating extension):
1. Do not lift handset or press SPK.
2. Press Room Monitor key (PGM 15-07 or SC 851: 39).
3. Dial number of extension you want to monitor.
   You can place and answer other calls while Room Monitor is active.

To activate Room Monitor (at the extension to be monitored):
1. Go to the extension you want to monitor.
2. Do not lift handset or press SPK.
4. Dial the number of the extension you are at.
   For example, if you are at extension 306, dial 306.
   You can place and answer other calls while Room Monitor is active.

To cancel Room Monitor (at either extension):
1. Press Room Monitor key at both the initiating extension and the monitored extension.

Single Line Telephones:

To activate Room Monitor (at the extension to be monitored):
1. Go to the extension you want to monitor.
2. Lift handset at the phone to be monitored.
3. Dial 770.
5. Dial number of extension number which will be monitoring the phone.
6. Place the handset on the desk, placing the handset’s transmitter towards the room.
   You cannot place or answer other calls while Room Monitor is active.

To activate Room Monitor (at the initiating extension):
1. Lift handset at the phone which will be monitoring another phone.
2. Dial 770.
3. Dial 2.
4. Dial number of extension number which will be monitored.

_You cannot place or answer other calls while Room Monitor is active._

**To cancel Room Monitor (at either extension):**

1. 1. Hang up the handsets for both the monitored and the monitoring phones.
Save Number Dialled

• Description

Save Number Dialled permits an extension user to save their last outside number and easily redial it later on. For example, an extension user can recall a busy or unanswered number without manually Dialling the digits. The system retains the saved number until the user stores a new one in its place.

Save Number Dialled saves in system memory a Dialed number up to 36 digits. The number can be any combination of digits 0-9, # and *. The system remembers the digits regardless of whether the call was answered, unanswered or busy. The system normally uses the same trunk group as for the initial call. However, the extension user can pre-select a specific trunk if desired.

Conditions

None

Default Setting

Enabled.

• Programming

15-07-01: Programming Function Keys

Assign a function key as a Save key (code 30).

• Related Features

• Automatic Route Selection
  For systems with Automatic Route Selection, ARS selects the trunk for the call unless the user preselects.

• Central Office Calls, Placing
  Other programmed options for outgoing calls can affect how a call is placed. Check or program these options as needed.

• Last Number Redial
  An extension user can quickly redial the last number placed.

• Programmable Function Keys
  Function keys simplify Save Number Dialled operation.

• Repeat Redial
  The system can automatically retry a trunk call that was unanswered or busy.

• Operation

To save the outside number you just Dialled (up to 36 digits):

Use this feature before hanging up.

System Phone

1. Press Save Number Dialed key (PGM 15-07 or SC 851: 30).

Single Line Telephone

1. Hookflash.
2. Dial 815.
To redial a saved number:

**System Phone**

1. (Optional) Press line key.
   *This selects a specific trunk for the call.*
2. Press Save Number Dialled key (PGM 15-07 or SC 851: 30).
   *The stored number dials out.*
   OR
   1. Press a SPK key
   2. Dial 815.
   OR
   Press Save Number Dialed key (PGM 15-07 or SC 851: 30).
   *Save Number Dialed automatically selects a trunk from the same group as your original call. The stored
   number dials out.*

**Single Line Telephone**

1. Hookflash.
2. Dial 815.

To check to see the number you have saved:

1. Press Save Number Dialed key (PGM 15-07 or SC 851: 30).
   *The stored number displays for ten seconds.*
   The stored number dials out if you:
   - Lift the handset,
   - Press an idle line key,
   - Press a CALL key, or
   - Press SPK
2. Press CLEAR.

To clear your saved number:

**System Phone**

1. Press a SPK key.
2. Dial 885.
3. Press SPK to hang up.

**Single Line Telephone**

1. Lift handset and dial 885.
2. Hang up.
Secretary Call Buzzer

• Description
Secretary Call lets two co-workers alert each other without disturbing their work. To have Secretary Call, both co-workers must have System Phones with Secretary Call buzzer keys. When a user presses their buzzer key, the system alerts the called extension by sending a splash tone and flashing the called extension’s buzzer key. The called user can respond by placing an Intercom call to the calling party. The called extension’s buzzer key continues to flash until either user cancels the Secretary Call. A secretary could use this feature, for example, to get a message through to the boss in an important meeting. After being alerted, the boss could call the secretary when it’s most convenient.

An extension can have Secretary Call keys for any number of extensions, limited only by the available number of programmable keys.

Conditions
A. Secretary Call is not available to single line telephone users.
B. Secretary Call does not set up an Intercom call.
C. When assigning Secretary Call, a user enters the associated extension numbers, not port numbers.

Default Setting
Disabled.

• Programming
15-07-01: Programming Function Keys
Assign function keys for Secretary Call buzzer (code 42 + Hold + the destination extension number). Both co-workers must have buzzer keys for each other.

• Related Features
• Programmable Function Keys
Secretary Call requires a uniquely programmed function key.
• Single Line Telephones
Single line telephones cannot use Secretary Call.

• Operation
To buzz your secretary or boss:
1. Do not lift handset.
2. Press buzzer key (PGM 15-07 or SC 851: 41 + sec. ext.).
   Your boss or secretary hears ringing.
   Your buzzer key lights steadily.
   Your boss’s or secretary’s buzzer key flashes fast.

To check to see who left you a Secretary Call:
1. Do not lift handset.
2. Press CHECK.
3. Press flashing Secretary Call key.
4. Press CLEAR.
To answer your Secretary Call indication:
   1. Place an Intercom call to the extension that called you.

To cancel a Secretary Call you left at another extension:
   1. Press your lit Secretary Call key.

To cancel a Secretary Call left at your extension:
   1. Do not lift handset.
   2. Press flashing Secretary Call key.
Secretary Call Pickup

• Description

Secretary Call Pickup lets a system phone user easily reroute calls intended for a co-worker to themselves. By pressing a Secretary Call Pickup key, the user can have all calls to a co-worker’s phone ring or voice-announce theirs instead. Secretary Call Pickup is a simplified type of Call Forward with Follow Me for employees that work closely together. This feature could be helpful to customer service representatives that must frequently cover each other’s clients. When a representative leaves their desk, an associate could press the Secretary Call Pickup key to intercept all their calls.

An extension can have Secretary Call Pickup keys for any number of extensions, limited only by the available number of programmable keys.

Conditions

Secretary Call Pickup is not available to single line telephone users.

Default Setting

Disabled.

• Programming

15-07-01: Programming Function Keys
Assign function keys for Secretary Call Pickup (42 + boss ext). Unlike Secretary Call, you do not have to program a corresponding key at the source and destination extensions.

• Related Features

• Call Forwarding with Follow Me
An extension user can also have Call Forwarding with Follow Me reroute a co-worker’s calls to themselves.

• Programmable Function Keys
Secretary Call pickup requires a uniquely programmed function key.

• Secretary Call (Buzzer)
Co-workers can alert each other without disturbing their work.

• Single Line Telephones
A system phone can have a Secretary Call Pickup key for a single line telephone.

• Operation

To activate Secretary Call Pickup:

1. Press your Secretary Call Pickup key (PGM 15-07 or SC 851: 42 + boss ext.).

   Your Secretary Call Pickup key lights and the Boss's telephone display shows "BOSS FWD>>".
   Calls intended for covered extension ring your phone instead.

To cancel Secretary Call Pickup:

1. Press your lit Secretary Call Pickup key (PGM 15-07 or SC 851: 42 + boss ext.).

To check a key’s Secretary Call Pickup assignment:
1. Press CHECK.
2. Press your Secretary Call Coverage key (PGM 15-07 or SC 851: 42 + boss ext.).
3. Press CLEAR.
Selectable Display Messaging

• Description

An extension user can select a pre-programmed Selectable Display Message for their extension. Display system phone callers see the selected message when they call the user’s extension. Selectable Display Messaging provides personalized messaging. For example, an extension user could select the message “GONE FOR THE DAY” Any display system phone user calling the extension would see the message. Other than displaying the message, the system puts the call through normally. See table below for a list of the standard messages.

An extension user can add digits for date, time or phone number after messages 1-8 and 10 (up to 16 characters). For example, an extension user could select the message “B-TRIP BACK” and then enter the date. Callers see the original message followed by the appended date. They would then be able to tell when the user was coming back from Business Trip.

The default messages are:

<table>
<thead>
<tr>
<th>No.</th>
<th>Message</th>
<th>Change “#” to</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>MEETING BY #:#:#</td>
<td>Time (when meeting done)</td>
</tr>
<tr>
<td>02</td>
<td>ROOM - ####</td>
<td>Room Name or extension</td>
</tr>
<tr>
<td>03</td>
<td>COME BACK #:#:#</td>
<td>Time (when returning)</td>
</tr>
<tr>
<td>04</td>
<td>CALL ####</td>
<td>11 digits (phone number)</td>
</tr>
<tr>
<td>05</td>
<td>CALL AFTER #:#:#</td>
<td>Time (when returning)</td>
</tr>
<tr>
<td>06</td>
<td>LUNCH BACK #:#:#</td>
<td>Time (when returning)</td>
</tr>
<tr>
<td>07</td>
<td>B. TRIP BACK #/#/#</td>
<td>Date (when returning)</td>
</tr>
<tr>
<td>08</td>
<td>B. TRIP #/#/#/#/#/#</td>
<td>10 digits (where reached)</td>
</tr>
<tr>
<td>09</td>
<td>GONE FOR THE DAY</td>
<td></td>
</tr>
<tr>
<td>10</td>
<td>DAY OFF BY #/#/#</td>
<td>Date (when returning)</td>
</tr>
<tr>
<td>11- 20</td>
<td>MESSAGE 11-20</td>
<td></td>
</tr>
</tbody>
</table>

Messages 11-20 are available for the user to select their own messages. They must be pre-set by the installer with program 20-16-01.

Conditions
None

Default Setting
Enabled.
• Programming

15-07-01: Programming Function Keys
Assign a function key for Call Forwarding (Device) (code 17) or Text Message (code 18). The Call Forwarding Device key allows the user to select a message each time they activate the feature, while the Text Message key automatically selects the message used when programming the key.

20-02-07: System Options for System Telephones - Time and Date Display Mode
Set the System Time and Date display mode. The time that displays in Selectable Display Messages follows this setting.

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-13-19: Class of Service Options (Supplementary Service) - Selectable Display Messaging
In an extension's Class of Service, enable (1) or disable (0) an extension's ability to use Selectable Display Messaging.

20-16-01: Selectable Display Messages
Program the Selectable Display Messages (1-20). Refer to the chart below for character entry.

<table>
<thead>
<tr>

<td>Accepts an entry (only required if two letters on the same key are needed).</td>
</tr>
<tr>
<td>DND/CONF</td>
<td>Clear the character entry one character at a time.</td>
</tr>
<tr>
<td>CLEAR</td>
<td>Clear all the entries from the point of the flashing cursor and to the right.</td>
</tr>
</tbody>
</table>
• Related Features
  • Do Not Disturb
    The DND key blinks when an extension is forwarded and it does not have Programmable Function Key programmed for 16 or 17. Setting a message will cancel a DND setting
  • Programmable Function Keys
    Function keys simplify Selectable Display Messaging operation.

• Operation

To select a message:

1. Press a SPK key + dial 713.
   OR
   Press Call Forward (Device) key (PGM 15-07 or SC 851: 17).
   OR
   Press a CALL key + press Text Message key (PGM 15-07 or SC 851: 18) + enter digits to append, if needed + SPK to hang up.

2. 2. Dial 3 + Message number (01-20).
   Use VOL▼ or VOL▲ to scroll through the messages.

3. (Optional for messages 1-8 and 10)
   Dial the digits you want to append to the message.
   You can append messages 1-8 and 10 with digits (e.g., the time when you will be back).
   You enter the time in 24-hour format, but it displays in 12/24-hour format as specified in Program 20-02-07.

4. Press SPK to hang up.

To cancel a message:

1. Press a SPK key + dial 713.
   OR
   Press Call Forward (Device) key (PGM 15-07 or SC 851: 17).
   OR
   Press a CALL key + press Text Message key (PGM 15-07 or SC 851: 18) + SPK to hang up.

2. Dial 3.

3. Press SPK to hang up.
Serial Call

• Description

Serial Call is a method of transferring a call so it automatically returns to the transferring extension. Serial Calling saves transferring steps between users. For example, a Customer Service Representative (CSR) has a client on the phone who needs technical advice. The CSR wants to send the call to Tech Service, but needs to advise the client of certain costs when Tech Service is done. Rather than transferring the call back and forth, the CSR can use Serial Call to Technical Service and announce, “I have a caller on the phone. I need to talk to them again. Just hang up when you’re done and I’ll get them back.”

Conditions

The transferring extension can remain off-hook to auto-receive the callback or hang up and it will ring back to them.

Default Setting

Disabled.

• Programming

15-07-01: Programming Function Keys

Assign a programmable key as a Serial Call key (code 43).

• Related Features

• Programmable Function Keys
  Serial Call requires a uniquely programmed function key.

• Single Line Telephones
  Serial Call is not available to single line telephones.

• Transfer
  An extension user can extend (send) a call to a co-worker.

• Operation

To place a Serial Call to a co-worker:

1. Place or answer a call.
2. Press HOLD.
3. Dial co-worker’s extension number.
   
   Co-worker must lift handset to respond to your announcement.
4. Press Serial Call key (PGM 15-07 or SC 851: 43) but do not hang up.
   
   When your co-worker hangs the call, the system makes an automatic live transfer back to your extension.
Single Line Telephones, Analogue Sets

• Description

The system is compatible with DTMF analogue single line telephones (SLTs). You can install single line telephones as On-Premise extensions only. Single line telephone users can dial codes to access many of the features available to system phone users. With Single Line Telephones, you can have your system simulate PBX type operation.

SLT port specification

</tr>
</tbody>
</table>

Conditions

A. Dial Pulse single line telephones are not supported.

Default Setting

Single Line Telephones function as soon as they are installed and properly programmed.

• Programming

10-03-01: PCB Setup
Assign the device type for adapters.

10-03-03: PCB Setup - Transmit CODEC Gain Type
Assign transmit and receive levels for single line telephones.

10-09-01: DTMF and Dial Tone Circuit Setup
If the system has DTMF single line extensions, allocate at least one circuit for analogue extension DTMF reception (entry 0 or 1). Use the following as a guide when allocating DTMF receivers:
- In light traffic sites, allocate one DTMF receiver for every 10 devices that use them.
- In heavy traffic sites, allocate one DTMF receiver for every 5 devices that use them.

15-03-03: Single Line Telephone Basic Data Setup - Terminal Type
Enter 0 for normal single line telephones. Enter 1 if a Voice Mail port (refer to “Voice Mail Integration” for more).
20-13-13: Class of Service Options (Supplementary Service) - Continued Dialling
Set option to ‘0’ to prevent dual DTMF tones when using Continued Dialling.

80-03-01: DTMF Tone Receiver Setup

80-04-01: Call Progress Tone Detector Setup
If required, modify the criteria for call progress tone detection for the DTMF tones received at a single line telephone.

82-04-01: Analogue Station Initial Data Setup
Set various timing parameters for the analogue station ports.

• Related Features
  • Single line telephone users have access to the following features:

  Abbreviated Dialling

  Warning Tone for Long Conversation

  • Refer to the individual features for additional descriptive, programming and operational information.

• Operation

Refer to the individual features listed in the Related Features chart above.
Station Message Detail Recording

• Description

Station Message Detail Recording (SMDR) provides a record of the system’s trunk calls. Typically, the record outputs to a customer-provided printer, terminal or SMDR data collection device. SMDR allows you to monitor the usage at each extension and trunk. This makes charge-back and traffic management easier.

SMDR provides the following options:

• Abandoned Call Reporting
  The SMDR report includes calls that rang into the system but were unanswered (i.e., abandoned). SMDR can include all abandoned calls or only those abandoned calls that rang longer than the specified duration. The Abandoned Call Report helps you keep track of lost business.

• Blocked Call Reporting
  When Toll Restriction blocks a call, you can have SMDR print the blocked call information. Or, you can have SMDR exclude these types of calls. With Blocked Call Reporting, you can better customize Toll Restriction for the site’s application.

• Customized Date Format
  The SMDR header can show the report date in one of three formats: American, European or Japanese. Set the format for your preference.

• Transferred Call Tracking
  SMDR shows each extension’s share of a transferred call. If an outside call is transferred among four extensions, SMDR shows how long each of the callers stayed on the call.

• Data Call Tracking
  Data Call Tracking can log the system’s internal data calls. Since SMDR normally logs external (trunk) data calls, Data Call Tracking lets you get a complete picture of data terminal activity.

• Digit Counting
  With Digit Counting, SMDR can selectively keep track of toll calls. For example, if the digit count is nine, SMDR won’t include toll calls within the home area code. Digit Counting permits SMDR to include only the types of calls you want to monitor.

• Digit Masking
  Digit Masking lets you “X” out portions of the number Dialled on the SMDR report. A digit mask of seven, for example, masks out all exchange codes (NNXs) and local addresses. Digit Masking makes it easier to keep track of calling patterns, without having to interpret each individual number. You can also use Digit Masking to block out access and security codes.

• Duration Monitoring
  SMDR can include calls of any duration, or only those that last longer than the interval you specify. If you want to keep track of all trunk activity, use a short duration. To keep track of only significant usage, use a longer duration.

• Extension Exclusion
You can selectively exclude extensions from the SMDR report. This ensures privacy for high profile callers. For example, the company attorney negotiating a merger may not want his calls to show up on an in-house report.

- **PBX Call Reporting**
  If your system is behind a PBX, you can have SMDR monitor all traffic into the PBX or just calls placed over PBX trunks. The SMDR record can include all PBX calls (including calls to PBX extensions) or just calls that include the PBX trunk access code.

- **Trunk Exclusion**
  Use Trunk Exclusion to exclude certain trunks not subject to per-call charges (like WATS lines) from the SMDR report. This makes call accounting easier, since you review only those calls with variable costs.

- **Usage Summaries**
  SMDR can automatically print daily, weekly and monthly call activity summaries. Each summary includes the total number of regular trunk calls and ISDN trunk calls, and the costs for each type. The daily report prints every day at midnight. The weekly report prints every Sunday night at midnight. The monthly report prints at midnight on the last day of the month.

- **Extension Name or Number**
  The SMDR report can include an extension’s name or extension number. Choose the method that makes it easier for you to track call usage.

**Conditions**

A. The SMDR report does not include voice Intercom calls.
B. The SMDR call buffer stores calls. The buffer stores calls when the SMDR device is unavailable. When the buffer fills, each new call is not recorded. The alarm display telephone assigned in Program 90-11-01 shows “SMDR Buffer Full,” indicating that the buffer is full. To clear the buffer, the SMDR information must be printed out. When not using SMDR, make sure Program 90-13-01=0 or Program 90-11-01=0 otherwise the SMDR alarm will display to the extension in Program 90-11-01 or to the operator’s extension.
C. SMDR requires a connection to the EXIFU, via a COM port, or LAN port.
D. To ensure accurate timing of outgoing call durations when using analogue PSTN lines, the line supervision facility “Line Reversal on Answer” must be subscribed to with your service provider and programmed into the system using Program 14-02-08 = 0.

**Default Setting**

Disabled.

Summary Reports

OUTGOING CALL/COST SUMMARY
FOR DAY OF nn/nn/nn

Total No. of outgoing PSTN calls: 0
Total No. of outgoing ISDN calls: 0
No. of outgoing PSTN calls costed: 0 Cost: 0
No. of outgoing ISDN calls costed: 0 Cost: 0

OUTGOING CALL/COST
SUMMARY FOR WEEK ENDING nn/nn/nn
Total No. of outgoing PSTN calls: 49
Total No. of outgoing ISDN calls: 0
No. of outgoing PSTN calls costed: 0 Cost: 0
No. of outgoing ISDN calls costed: 0 Cost: 0

OUTGOING CALL/COST SUMMARY
FOR MONTH ENDING nn/nn/nn
Total No. of outgoing PSTN calls: 49
Total No. of outgoing ISDN calls: 0
No. of outgoing PSTN calls costed: 0 Cost: 0
No. of outgoing ISDN calls costed: 0 Cost: 0

SMDR Output Options
You can change the information output via the SMDR. The following options are available.

Omit dialled digits
Program 35-01-04

The SMDR will replace the dialled digits with an X character.

This will prevent the administrator seeing the exact number dialled but will not prevent any billing operation of the call logging application.

CLASS TIME LINE DURATION STATION DIALED No./CLI RD/COST ACCOUNT
01 POT 10:44 LINE 001 00:00:30 STA 224 120392654XX 8841

Minimum quantity of dialled digits
Program 35-01-05

The SMDR will only output the call record if the minimum quantity of digits are dialled for an outgoing call.

Minimum call duration
Program 35-01-06

The SMDR will only output the call record if the minimum call duration is reached for incoming and outgoing calls.

Minimum ring duration
Program 35-01-07
The SMDR will only output the call record if the minimum ring duration is reached for incoming abandoned calls. An abandoned call is shown as NO ANSWER on the SMDR.

This timer does not affect calls that are answered.

**Trunk name or number**
Program 35-02-03

The SMDR can either enter the trunk name or trunk number in the LINE field for each call record.

The trunk name is set in program 14-01-01.

<table>
<thead>
<tr>
<th>CLASS</th>
<th>TIME</th>
<th>LINE</th>
<th>DURATION</th>
<th>STATION</th>
<th>DIALLED No./CLI</th>
<th>RD/COST ACCOUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>01 POT</td>
<td>10:44</td>
<td>Line 001</td>
<td>00:00:30</td>
<td>STA 224</td>
<td>120392654XX</td>
<td>8841</td>
</tr>
</tbody>
</table>

The trunk number is from 001 to 051.

<table>
<thead>
<tr>
<th>CLASS</th>
<th>TIME</th>
<th>LINE</th>
<th>DURATION</th>
<th>STATION</th>
<th>DIALLED No./CLI</th>
<th>RD/COST ACCOUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>01 POT</td>
<td>10:44</td>
<td>001</td>
<td>00:00:30</td>
<td>STA 224</td>
<td>120392654XX</td>
<td>8841</td>
</tr>
</tbody>
</table>

**Extension name or number**
The SMDR can either enter the extension name or extension number in the STATION field for each call record.

The extension name is set in program 15-01-01.

<table>
<thead>
<tr>
<th>CLASS</th>
<th>TIME</th>
<th>LINE</th>
<th>DURATION</th>
<th>STATION</th>
<th>DIALLED No./CLI</th>
<th>RD/COST ACCOUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>01 POT</td>
<td>10:44</td>
<td>001</td>
<td>00:00:30</td>
<td>P.Jones</td>
<td>120392654XX</td>
<td>8841</td>
</tr>
</tbody>
</table>

The extension number is set in program 11-01-02.

<table>
<thead>
<tr>
<th>CLASS</th>
<th>TIME</th>
<th>LINE</th>
<th>DURATION</th>
<th>STATION</th>
<th>DIALLED No./CLI</th>
<th>RD/COST ACCOUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>01 POT</td>
<td>10:44</td>
<td>001</td>
<td>00:00:30</td>
<td>224</td>
<td>120392654XX</td>
<td>8841</td>
</tr>
</tbody>
</table>

**All Lines Busy**
Program 35-02-10

The SMDR will output a call record each time a trunk group has all lines busy simultaneously.

The LINE field will show the trunk group number that is busy.

The DURATION field shows how long all lines were busy.

<table>
<thead>
<tr>
<th>CLASS</th>
<th>TIME</th>
<th>LINE</th>
<th>DURATION</th>
<th>STATION</th>
<th>DIALLED No./CLI</th>
<th>RD/COST ACCOUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>05 ALB</td>
<td>10:50</td>
<td>002</td>
<td>00:01:40</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**DDI Name output**
Program 35-02-12

The call records for incoming ISDN DDI calls can show the name assigned to the DDI in the LINE field.

The DDI names are assigned in program 22-11-03 for each DDI number.

<table>
<thead>
<tr>
<th>CLASS</th>
<th>TIME</th>
<th>LINE</th>
<th>DURATION</th>
<th>STATION</th>
<th>DIALLED No./CLI</th>
<th>RD/COST ACCOUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>01 IVIN</td>
<td>10:44</td>
<td>Main No</td>
<td>00:00:30</td>
<td>STA 224</td>
<td>01765768691</td>
<td></td>
</tr>
</tbody>
</table>
**Date output for each call record**
Program 35-02-14

The call records can include the date in the LINE field.

The date is output as dd/mm followed by a space and then three digits to indicate the line number.

Note. When you enable date output the following options are ignored.

Program 35-02-03, Trunk name or number

Program 35-02-12, DDI name output

<table>
<thead>
<tr>
<th>CLASS</th>
<th>TIME</th>
<th>LINE</th>
<th>DURATION</th>
<th>STATION</th>
<th>DIALLED No./CLI</th>
<th>RD/COST ACCOUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>IVIN</td>
<td>09/03</td>
<td>001</td>
<td>STA 224</td>
<td>01765768691</td>
<td></td>
</tr>
</tbody>
</table>

**DDI or CLIP number output**
Program 35-02-15

The call records for incoming ISDN DDI calls can show the DDI number instead of the CLIP number in the DIALLED No./CLI field.

<table>
<thead>
<tr>
<th>CLASS</th>
<th>TIME</th>
<th>LINE</th>
<th>DURATION</th>
<th>STATION</th>
<th>DIALLED No./CLI</th>
<th>RD/COST ACCOUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>IVIN</td>
<td>001</td>
<td>00:00:30</td>
<td>STA 224</td>
<td>643111</td>
<td></td>
</tr>
</tbody>
</table>

**DDI number or Line information output**
Program 35-02-16

The call records for incoming ISDN DDI calls can show the DDI number instead of the line name or number in the LINE field.

<table>
<thead>
<tr>
<th>CLASS</th>
<th>TIME</th>
<th>LINE</th>
<th>DURATION</th>
<th>STATION</th>
<th>DIALLED No./CLI</th>
<th>RD/COST ACCOUNT</th>

<td>001</td>
<td>00:00:30</td>
<td>STA 224</td>
<td>01765768691</td>
<td></td>
</tr>
</tbody>
</table>

**• Programming**

**10-21-02: Hardware Setup - Baud Rate for COM Port**
If the SMDR connection is made using the COM port on the EXIFU unit, define the baud rate (0=4800, 1=9600, 2=19200, 3=38400, 4=57600, 5=115200).

**11-10-23: Service Code Setup (for System Administrator) - SMDR - Extension Accumulated Printout Code**
Assign a service code for printing Accumulated Extension Data (default: 721).

**11-10-24: Service Code Setup (for System Administrator) - SMDR - Group Accumulated Printout Code**
Assign a service code for printing Accumulated Department Group Data (default: 722).

**11-10-25: Service Code Setup (for System Administrator) - Account Code Accumulated Printout Code**
Assign a service code for printing Accumulate Account Code Data (Default: 723).
14-01-06: Basic Trunk Data Setup - SMDR Print Out
For each trunk, enter 0 if trunk’s calls should appear on SMDR report. Enter 1 if trunk’s calls should not appear on SMDR report.

14-02-08: Analogue Trunk Data Setup – Answering Condition
To ensure accurate timing of outgoing call durations when using analogue PSTN lines, the line supervision facility “Line Reversal on Answer” must be subscribed to with your service provider and programmed into the system using Program 14-02-08 = 0.

15-01-03: Basic Extension Data Setup - SMDR Printout
For each extension, enter 1 if extension’s calls should appear on SMDR report. Enter 0 if extension’s calls should not appear on SMDR report.

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to an extension.

20-07-18: Class of Service Options (Administrator Level) - SMDR Printout Accumulated Extension Data
In an extension’s Class of Service, enable (1) or disable (0) and extension’s ability to print Accumulated Extension Data (default: 0 [disabled]).

20-07-19: Class of Service Options (Administrator Level) - SMDR Printout Accumulated STG Data
In an extension’s Class of Service, enable (1) or disable (0) and extension’s ability to print Assign a service code for printing Accumulated Department Group Data (default: 0 [disabled]).

20-07-20: Class of Service Options (Administrator Level) - SMDR Printout Accumulated Account Code Data
In an extension’s Class of Service, enable (1) or disable (0) and extension’s ability to print Assign a service code for printing Accumulated Account Code Data (default: 0 [disabled]).

35-01-01: SMDR Options - Output Port Type
Specify the type of connection used for SMDR (0=No setting, 1=COM Port(EXIFU), 3=LAN Port (EXIFU). The baud rate for the COM port should be set in Program 10-21-02.

35-01-04: SMDR Options - Omit (Mask) Digits
Enter the number of digits (1-36) you want SMDR to block (i.e., “X” out). Enter 0 not to block any digits.

35-01-05: SMDR Options - Minimum Number of SMDR Digits
Enter the minimum number of digits a user must dial (1-24) before the system includes a call on the SMDR report. Enter 0 to include all outgoing calls, regardless of the number of digits dialled.

35-01-06: SMDR Options - Minimum Call Duration
Enter the minimum duration of a call (1-65535) that will print on the SMDR report. Enter 0 to have calls of any duration print.

35-01-07: SMDR Options - Minimum Ringing Time
Enter how long an unanswered call must ring (1-65535) before SMDR logs it as “No Answer). Enter 0 to allow all “No Answer” calls to print.
35-02-01: SMDR Output Options - Toll Restricted Call
Enter 1 if you want the SMDR report to include calls blocked by Toll Restriction. Enter 0 to exclude blocked calls.

35-02-02: SMDR Output Options - PBX Calls
If system is behind a PBX, enter 1 to have SMDR include all calls to the PBX. Enter 0 to have SMDR include only calls dialled using PBX trunk access code.

35-02-03: SMDR Output Options - Display Trunk Name or Number
Select whether the system should display the trunk name (0) or the number (1) on SMDR reports. If this option is set to “1”, Program 35-02-14 must be set to “0”.

35-02-04: SMDR Output Options - Daily Summary
35-02-05: Weekly Summary and
35-02-06: Monthly Summary
Enter 1 to enable a summary report. Enter 0 to disable a summary report. The daily report prints every day at midnight. The weekly report prints every Sunday night at midnight. The monthly report prints at mid-night on the last day of the month.

35-02-08: SMDR Output Options - Incoming Calls
Enter 0 if you want the SMDR report to include incoming calls. Enter 1 if you want the SMDR report to exclude incoming calls.

35-02-09: SMDR Output Options - Print Name or Number
Enter 0 if you want the SMDR report to include the extension’s name. Enter 1 if you want the SMDR report to include the extension’s number.

35-02-14: SMDR Output Options – Date
Determine whether the date should be displayed on SMDR reports (0=not displayed, 1=displayed). This option must be set to “0” if the trunk name is set to be displayed in Program 35-02-03.

35-02-16: SMDR Output Options - Print Trunk Name or Received Dialled Number
Enter 0 if you want the SMDR report to print the trunk port name (as assigned in Program 14-01-01). Enter 1 if you want the SMDR report to print the received dialled number. On ANI/DNIS trunks, if enabled (Program 2404:1), the DNIS digits can be printed on the SMDR reports instead of the trunk name. For DID trunks, if the received number is not defined in Program 22-11-01, then no number will be printed.

80-05-01: Date Format for SMDR and System Reports
Set the date format for SMDR (0=American, 1=Japanese or 2=European).

• Related Features
  • PBX Compatibility
  To use the PBX Call Reporting option, program system for behind PBX operation.
• **Operation**

Once installed and programmed, SMDR call recording operation is automatic.

**To activate SDMR Printout – Accumulated Extension Data:**

1. A system phone, press the **CALL** key.
   OR
   At single line telephone, lift handset.
2. Dial **721**.
3. Dial Extension Number, or skip for All Extensions.
4. Dial **#**.
5. Press **SPK** to hang up.

**To activate SDMR Printout – Accumulated Group Data:**

A system phone, press the **CALL** key.

OR

At single line telephone, lift handset.
1. Dial **722**.
2. Dial Extension Number, or skip for All Extensions.
3. Dial **#**.
4. Press **SPK** to hang up.

**To activate SDMR Printout – Accumulated Account Code Data:**

1. A system phone, press the **CALL** key.
   OR
   At single line telephone, lift handset.
2. Dial **723**.
3. Dial Extension Number, or skip for All Extensions.
4. Dial **#**.
5. Press **SPK** to hang up.
Tandem Trunking (Unsupervised Conference)

• Description

Tandem Trunking allows an extension user to join two or more outside callers in a trunk-to-trunk Conference. The extension user can then drop out of the call, leaving the trunks in an Unsupervised Conference. The extension user that established the Conference is not part of the conversation. The Conference continues until either outside party hangs up. In addition, the extension user that set up the Conference can end the tandem call at any time.

The number of Conference calls is limited by the number of Conference circuits in the system. Due to this fact, the maximum number of Conference members cannot exceed 32.

Tandem Trunking could help an office manager, for example, put two outside sales people in touch. The office manager could:

• Answer a call from one salesperson
• Place a call to the second salesperson
• Set up the trunk-to-trunk Conference
• Drop out of the call

The office manager could terminate the Conference at any time.

There are two methods for Enhanced Tandem Trunking:

• Method A - Set Up Without Transfer Key
  An extension user can set up Tandem Trunking (Unsupervised Conference) by using the CONF key. This option uses a uniquely programmed Transfer key to set up a tandem call.
• Method B - Tandem Trunking on Hang Up
  This method allows an extension user to easily set up an Unsupervised Conference with a call they have placed on Hold. It uses a uniquely programmed Transfer key to set up a tandem call.

Conditions

A. Tandem Trunking requires analogue loop start trunks with disconnect supervision or ISDN trunks.
B. The maximum number of trunk-to-trunk conferences allowed is determined by the Conference feature setup. See Programming below.

Default Setting

Disabled.

• Programming

Tandem Trunking Method A - Tandem Trunking from Conference

14-01-04: Basic Trunk Data Setup - Transmit Gain Level for Conference and Transfer Calls
Select the CODEC gain type used by the trunk when it is part of an Unsupervised Conference.
14-01-05: Basic Trunk Data Setup - Receive Gain Level for Conference and Transfer Calls
Select the CODEC gain type used by the trunk when it is part of an Unsupervised Conference.

14-01-13: Basic Trunk Data Setup - Loop Supervision
For each trunk that should be able to participate in a tandem call, enter 1.

15-07-01: Programming Function Keys
(Optional) Assign a function key for Transfer (code 06).

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to an extension.

20-13-08: Class of Service Options (Supplementary Service) – Conference
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to initiate a Conference.

20-13-10: Class of Service Options (Supplementary Service) - Barge In Mode
In an extension’s Class of Service, set whether an extension should be able to Barge In to a call and talk (1) or just monitor the call (0).

20-11-14: Class of Service Options (Hold/Transfer Service) - Trunk-to-Trunk Transfer
Disable (0) the Trunk-to-Trunk Transfer Restriction option.

Tandem Trunking Method B - Tandem Trunking on Hang Up

14-01-04: Basic Trunk Data Setup – Transmit Gain Level for Conference and Transfer Calls
Select the CODEC gain type used by the trunk when it is part of an Unsupervised Conference.

14-01-05: Basic Trunk Data Setup - Receive Gain Level for Conference and Transfer Calls
Select the CODEC gain type used by the trunk when it is part of an Unsupervised Conference.

14-01-13: Basic Trunk Data Setup - Loop Disconnect Supervision
For each trunk, enter 1 to enable loop supervision.

14-02-12: Detect Network Disconnect Signal
Enable the network disconnect signal detection for proper release of analogue trunks.

15-07-01: Programming Function Keys
Assign a function key for Transfer (code 06).

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to an extension.

20-07-11: Class of Service Options (Administrator Level) - Forced Trunk Disconnect
In an extension’s Class of Service, enter 1 to enable Forced Trunk Disconnect. This allows the extension to disconnect an Unsupervised Conference in progress (initially set up using Method B).
20-13-08: Class of Service Options (Supplementary Service) – Conference
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to initiate a Conference.

20-13-10: Class of Service Options (Supplementary Service) - Barge In Mode
In an extension’s Class of Service, set whether an extension should be able to Barge In to a call and talk (1) or just monitor the call (0).

20-11-14: Class of Service Options (Hold/Transfer Service) - Trunk-to-Trunk Transfer
Disable (0) the Trunk-to-Trunk Transfer Restriction option.

24-02-07: Forced release for Trunk-to-Trunk Transfer
Specify the maximum length of time a trunk-to-trunk transfer (tandem transfer) can be in progress before it is forcibly disconnected (default=30 minutes).

• Related Features
  • Central Office Calls, Answering / Central Office Calls, Placing
    Other programmed options for incoming and outgoing calls can affect how calls are handled. Check or program these options as needed.
  • Conference, Voice Call
    Set up a Conference with a co-worker in your immediate work area.
  • Meet Me Conference
    Meet Me Conference lets an extension user set up a Conference via Paging.
  • Meet Me Paging
    Meet Me Paging lets an extension user set up a two-party meeting via Paging.

• Operation

Method A - Tandem Trunking from Conference

To set up a Tandem Call:
1. Place or answer first trunk call.
2. Press CONF key.
3. Place or answer second trunk call.
4. To add more calls to the tandem call, repeat from Step 2. or to set up the tandem call, press CONF key twice.
   This sets up a Conference between you and both outside parties.
5. Press Transfer key (PGM 15-07 or SC 851: 06).

To end the Tandem Call:
1. Press either flashing line key.
   The line keys light steadily (green). You can listen (i.e., monitor) to the call or rejoin the conversation, based on the setting in Program 20-13-10.
2. Press SPK or Hang up.
   If Program 20-13-10 is set to “0”, the Conference ends and the line keys go out.
   If Program 20-13-10 is set to “1”, to disconnect the Conference, you must use Forced Trunk Disconnect (i.e., Press the line key + 724).

Method B - Tandem Trunking on Hang up
To set up a Tandem Call:

1. Answer first trunk call.
2. Press HOLD to place the first trunk call on Hold.
3. Place second trunk call.
4. Press Transfer key (PGM 15-07 or SC 851: 06) or hang up.
   
   *This sets up an Unsupervised Conference with both outside parties.*
   
   *The line keys for the trunks light steadily (red).*
   
   *To disconnect the Conference, use Forced Trunk Disconnect (i.e., Press line key + 724).*
Time and Date

• Description

The system Time and Date for:

| • Central Office Calls (Access Maps) | • Ring Groups |
| • Class of Service (Class)          | • Station Message Detail Recording |
| • Direct Inward Lines               | • System Reports |
| • Display Telephones                | • Toll Restriction (Class) |
| • Fax Machine Compatibility         | • Trunk Group Routing |
| • Night Service (Automatic)         | • Voice Response System |
| • Programmable Trunk Parameters     |                          |

Conditions

• The system retains the Time and Date after a power failure or system reset.
• The system can automatically adjust for daylight savings time if desired.
• The date must be set in system programming.

Default Setting

Enabled.

• Programming

10-01-01: Time and Date
Set the system Time and Date from your administrator’s telephone.

10-24 : Daylight Saving Setup

20-02-07: System Options for System Telephones - Time and Date Display Mode
Select the display mode (type 1-8) for Time and Date (i.e., Time and Date format).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-07-03: Class of Service Options (Administrator Level) - Time and Date
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to set the Time and Date.

• Related Features

• Class of Service
Changing the time may change the current COS service depending on the COS mode setup.

• Single Line Telephones
Single line telephones cannot set the Time and Date.

• Operation

To set the system Time:
1. Press a SPK key.
2. Dial 828.
3. Dial two digits for the hour (24 hour clock, 13 = 1:00 PM).
4. Dial two digits for the minutes (00-60).
5. Press SPK to hang up.
Toll Restriction

• Description

Toll Restriction limits the numbers an extension user may dial. By allowing extensions to place only certain types of calls, you can better control long distance costs. The system applies Toll Restriction according to an extension’s Toll Restriction Class. The system allows for up to 15 Toll Restriction Classes.

Toll Restriction offers the following capabilities:

- Common Permit Code Table
  Use the Common Permit Code Table when you have numbers you want all Toll Restriction Classes to dial. To let all users dial 000 (000 is an emergency call in Australia), for example, put 000 in the Common Permit Code Table. The Common Permit Code Table overrides the Restrict Code and Common Restrict Code Tables. The system provides 10 tables, with 10 entries in each table. Each code is 4 digits max., using 0-9, #, * and FLASH (as a wild card).

- Common Restrict Code Table
  The Common Restrict Code Table lets you globally restrict certain numbers for all Toll Restriction Classes. To prevent all users from Dialling directory assistance (411), for example, put 411 in the Common Restrict Code Table. Be sure you don’t allow the codes you want to restrict in the Permit Code Table or the Common Permit Code Table. The system provides 10 tables, with 10 entries in each table. Each code is 4 digits max., using 0-9, #, * and FLASH (as a wild card).

- Restrict Code Table
  When you want Toll Restriction to allow most calls and restrict only selected calls, use the Restrict Code Table. To block only 1-900 calls, for example, enter 1900 in the Restrict Code Table. (If the same Toll Restriction Class has both Permit and Restrict Code Tables, the system restricts calls that you enter only in the Restrict Code Table. Calls entered in both tables are not restricted.) The system provides 4 tables, with 60 entries (restricted codes) in each table. A restricted code is 12 digits maximum, using 0-9, #, * and FLASH (as a wild card).

- Permit Code Table
  The Permit Code Table lets you set up Toll Restriction so that users can dial only selected (permitted) telephone numbers. Use this table when you want to restrict most calls. To allow all users to dial only area code 03, for example, enter 103 in the Permit Code Table. 1 + 03 + NNX + nnnn are the only numbers users can dial. (If the same Toll Restriction Class has both Permit and Restrict Code Tables, the system restricts calls that you enter only in the Restrict Code Table. Calls entered in both tables are not restricted.) The system provides 4 tables, with 60 entries (permitted codes) in each table. A permitted code is 12 digits maximum, using 0-9, #, * and FLASH (as a wild card).

- International Call Restriction
  International Call Restriction lets you limit the international calls an extension user may dial. You can build a restrict table to prevent only certain calls,
or you can build a permit table to allow only certain calls. To allow most international calls, use the International Call Restrict Table. To prevent most international calls, use the International Call Allow Table. The system provides 10 International Call Restrict tables with up to 4 digits in each table entry and 20 International Call Allow tables, with up to 6 digits in each table entry. Valid entries are 0-9, #,* and FLASH (for a wildcard).

- **Toll Restriction for Abbreviated Dialling**
  Abbreviated Dialling can bypass or follow Toll Restriction. If you allow many users to program Abbreviated Dialling, consider Toll Restricting the numbers they dial. If only administrators can program Abbreviated Dialling, Toll Restriction may not be necessary. You can separately restrict Group and Common Abbreviated Dialling.

- **Call Digit Counting**
  Use Call Digit Counting to limit the number of digits local callers can dial. You can use this option to prevent users from accessing local dial-up services. For example, set the Maximum Number of Digits in Local Calls to 8 to limit local callers to Dialling the exchange code (xxxx) and local address (nnnn) only. The system provides 4 tables in which you can make entries for this option. The range is 4-30 digits.

- **Toll Call Digit Counting**
  With Toll Call Digit Counting, you can limit the number of digits long distance callers can dial. This lets you prevent callers from Dialling extensively into long distance dial-up services. You can make four entries (4-30 digits).

- **Toll Free Trunks**
  Certain trunks can be completely unrestricted, such as the company president’s Private Line. Users can place calls on Toll Free Trunks anytime -- to anywhere, without inadvertently being toll restricted.

- **PBX Call Restriction**
  Toll Restriction programming lets you enable/disable PBX Call Restriction and enter PBX access codes. You only need to do this if your system is behind a PBX and you have trunks programmed for behind PBX operation. Refer to PBX Compatibility feature for the specifics.

**Conditions**

A. If a Toll Restriction Class has the same entries in both a permit and restriction table, the system does not restrict the call.

B. Toll Call Digit counting may prevent users from taking advantage of long distance automated services.

C. Toll Restriction is applied when accessing ARS.

**Default Setting**

Disabled.

**Programming**

14-01-08: Basic Trunk Data Setup - Toll Restriction
For each trunk, enter 0 to disable Toll Restriction; enter 1 to enable Toll Restriction.

20-06-01: Class of Service for Extensions
For each extension, assign a Class of Service (1-15).
20-08-02: Class of Service Options (Outgoing Call Service) - Trunk Calls
For each Class of Service, decide whether to enable (1) or disable (0) an extension's ability to place an outgoing trunk call.

20-13-20: Class of Service Options (Supplementary Service) - Account Code/ Toll Restriction Operator Alert
When toll restriction is violated, determine if the operator should be notified. (0=disable, 1=enable)

21-04-01: Toll Restriction Class
For each extension, assign a Toll Restriction Class for each Night Service mode.

21-05-01: Toll Restriction Class - International Call Restriction Table
For the Toll Restriction Class you select, enable (1) or disable (0) the International Call Restrict Table (Program 21-06-01).

21-05-02: Toll Restriction Class - International Call Permit Table
For the Toll Restriction Class you select, enable (1) or disable (0) the International Call Permit Table (Program 21-06-02).

21-05-04: Toll Restriction Class - Maximum Number of Digits Table Assignments
For the Toll Restriction Class you select, disable (0) or enable (1) the dialling limit for calls. When enabling, select from entries 1-4 in Program 21-06-03.

21-05-05: Toll Restriction Class - Common Permit Code Table
For the Toll Restriction Class you select, enable (1) or disable (0) the Common Permit Code Table (Program 21-06-04).

21-05-06: Toll Restriction Class - Common Restrict Code Table
For the Toll Restriction Class you select, enable (1) or disable (0) the Common Restrict Code Table (Program 21-06-05).

21-05-07: Toll Restriction Class - Restrict Code Table
For the Toll Restriction Class you select, disable (0) or enable the Permit Code Table. When enabling, select from tables 1-4 in Program 21-06-06.

21-05-08: Toll Restriction Class - Restrict Code Table
For the Toll Restriction Class you select, disable (0) or enable the Restrict Code Table. When enabling, select from tables 1-4 in Program 21-06-07.

21-05-09: Toll Restriction Class - Restriction for Common Abbreviated Dialling
For the Toll Restriction Class you select, enable (1) or disable (0) Toll Restriction for Common Abbreviated Dialling numbers.

21-05-10: Toll Restriction Class - Restriction for Group Abbreviated Dialling Numbers
For the Toll Restriction Class you select, enable (1) or disable (0) Toll Restriction for Group Abbreviated Dialling numbers.

21-05-11: Toll Restriction Class - Intercom Call Restriction
For the Toll Restriction Class you select, enable (1) or disable (0) Intercom Call Restriction. If enabled, extensions cannot place or receive Intercom calls.

21-05-12: Toll Restriction Class - PBX Call Restriction
For the Toll Restriction Class you select, enable (1) or disable (0) PBX Call Restriction. Refer to the PBX Compatibility Feature.

21-06-01: Toll Restriction Table Data Setup - International Call Restrict Table
Enter the international dialling codes you want to restrict.

21-06-02: Toll Restriction Table Data Setup - International Call Permit Table
Enter the international dialling codes you want to permit.

21-06-03: Toll Restriction Table Data Setup - Maximum Number of Digits Table Assignment
Select the maximum number of digits allowed in outgoing calls for each table (4-30).

21-06-04: Toll Restriction Table Data Setup - Common Permit Code Table
Program codes into the Common Permit Code Table.

21-06-05: Toll Restriction Table Data Setup - Common Restrict Table
Program codes into the Common Restrict Code Table.

21-06-06: Toll Restriction Table Data Setup - Permit Code Table
Program codes into the Permit Code Tables.

21-06-07: Toll Restriction Table Data Setup - Restrict Code Table
Program codes into the Restrict Code Tables.

21-06-08: Toll Restriction Table Data Setup - PBX Access Codes
The system allows up to 4 tables for PBX access codes. Refer to the PBX Compatibility feature for the specifics.

• Related Features
  • Central Office Calls, Placing
    The system will allow or deny outgoing access to trunks depending on Toll Restriction.
  • Direct Inward System Access (DISA)
    When using DISA, additional programming is required for Toll Restriction (DISA, see Program 25-10).
  • Toll Restriction, Dial Block
    A user can temporarily block their extension’s Toll Restriction access, preventing unwanted calls from being placed on their phone while they are away from their desk.
  • Toll Restriction Override
    A user can temporarily override an extension’s Toll Restriction.

• Operation

To place a trunk call if your system is Toll Restricted:

1. Place call normally.

   If your Toll Restriction Class does not allow the number you dial, your call will be cut off.
Toll Restriction-Dial Block

• Description

Toll Restriction-Dial Block lets a user temporarily block an extension’s Toll Restriction. This helps a user block his or her phone from being used by another person while they are away from their desk. A user would need to enter a 4-digit personal code to enable/disable this feature.

Dial Block can also be set by the system administrator. If Dial Block has already been set by an extension user, the supervisor can not release it. Additionally, if Dial Block has been set by the supervisor, and extension user can not release it.

Important: This function works by password and Class of Service control (the supervisor is not an assigned extension). If Dial Block is available for all Classes of Service, everyone may become a supervisor if they know the Dial Block password.

Conditions

A. If the system is reset by a cold start, the Dial Block feature is cleared.
B. This feature is not available for ISDN S-Bus extensions.
C. Both Programs 21-09-01 and 21-10 can be set at the same time. The system gives priority to the setting in Program 21-10.

Default Setting

Disabled.

• Programming

11-10-17: Service Code Setup (for System Administrator) - Dial Block by Supervisor
Assign a service code (101 by default) to be used by the supervisor to set Dial Block for another extension.

11-11-33: Service Code Setup (for Setup/Entry Operation) - Dial Block
Assign a service code (100 by default) to be used for Dial Block.

20-06-01: Class of Service for Extensions
Assign a COS to each extension (1-15).

20-08-08: Toll Restriction Dial Block
Enable (1) or disable (0) an extension’s ability to use Dial Block.

21-09-01: Dial Block Setup - Toll Restriction Class With Dial Block
Assign a Toll Restriction Class of Service (1-15) when the Dial Block feature is used.

21-09-02: Dial Block Setup - Supervisor Password
Assign a 4-digit password to be used by the supervisor to enable or disable Dial Block for other extensions.

21-10-01: Dial Block Restriction Class Per Extension
Assign the Toll Restriction class (1-15) to be used by an extension when the Dial Block feature is enabled. If this data is “0”, Toll Restriction Class follows Program 21-09-01.

90-19-01: Dial Block Release
Enter the extension number to be released from the Dial Block restriction. This program can be used when a password is forgotten by the user.

• Related Features
  • Toll Restriction
    Dial Block can temporarily block an extension’s Toll Restriction setting

• Operation

To set Dial Block:

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 700.
3. Dial the 4-digit Dial Block code.
   *A confirmation tone is heard.*
5. Press SPK or replace the handset to hang up.

To release Dial Block:

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 700.
3. Dial the 4-digit Dial Block code.
4. Dial 0.
   *A confirmation tone is heard.*
5. Press SPK or replace the handset to hang up.

To set Dial Block from another extension:

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 701.
3. Dial the 4-digit Dial Block code.
4. Dial the extension number to be blocked.
5. Dial 1.
   *A confirmation tone is heard.*
6. Press SPK or replace the handset to hang up.

To release Dial Block from another extension:

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 701.
3. Dial the 4-digit Dial Block code.
4. Dial the extension number to be released from Dial Block.
5. Dial 0.
   A confirmation tone is heard.
6. Press SPK or replace the handset to hang up.
Toll Restriction Override

• Description

Toll Restriction Override lets a user temporarily bypass an extension’s Toll Restriction. This helps a user that must place an important call that Toll Restriction normally prevents. For example, you could set up Toll Restriction to block 0011 calls and then provide a Toll Restriction Override code to your attendant and executives. When the attendant or executive needs to place a 0011 call, they just:

- Press CALL and dial their override code.
- Press a line key or dial a trunk access code (e.g., 0 or 805 002).
- Place the 0011 call without restriction.

You can assign a different Toll Restriction Override code to each extension. Or, extensions can share the same override code.

Conditions
None

Default Setting
Disabled.

• Programming

11-11-36: Service Code Setup (for Setup/Entry Operation) - Walking Toll Restriction
Assign a service code (163 763) for Toll Restriction Override.

20-08-06: Class of Service Options (Outgoing Call Service) - Toll Restriction Override
In an extension’s Class of Service, enable (1) or disable (0) the ability to use Toll Restriction Override.

21-01-07: System Options for Outgoing Calls - Toll Restriction Override Time
Set the Toll Restriction Override Time (0-64800 seconds). After dialling the Toll Restriction Override codes, the system removes Toll Restriction for this interval.

21-14-01: Walking Toll Restriction Password Setup - User ID
Enter the Toll Restriction Override User ID codes (6 digits) into tables. Up to 500 different override codes can be entered.

21-14-02: Walking Toll Restriction Password Setup - Walking Toll Restriction Class Number
Enter the Walking Toll Restriction Class of Service (1-15) to be used for each table number assigned in 21-14-01.

35-02-06 through 35-02-11 : SMDR Output Options
Assign the output condition for the printer or PC. If the data is set to “1” (output), the symbol of the call will print as “POTW” and the password table number will be printed as “W/ @@@” (@@ equals the 3 digit table number) in the Account Code area.

• Related Features
• **Station Message Detail Recording**
  In the **Class** heading in the SMDR report, POTW indicates that the call was placed using Toll Restriction Override.

• **Toll Restriction**
  Toll Restriction Override temporarily overrides an extension’s Toll Restriction.

• **Voice Response System (VRS)**
  If the system has VRS, users hear, “*Your call cannot go through. Please call the operator*” when they dial a number that Toll Restriction prevents.

**Operation**

**To temporarily override a restricted extension’s Toll Restriction:**

*You can override restriction for only one call at a time.*

1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 763.
3. Dial the 6-digit Toll Restriction Override code. If you wait too long before going to the next step, you may have to repeat the procedure. You’ll hear error tone if you dial your code incorrectly.
4. Press idle line key or dial trunk access code.
5. Dial number without restriction.
Transfer

**Description**

Transfer permits an extension user to send (i.e., extend) an active Intercom or outside call to any other extension in the system. With Transfer, any extension user can quickly send a call to the desired co-worker. A call a user transfers automatically recalls if not picked up at the destination extension. This assures that users do not lose or inadvertently abandon their transfers. While a transferred call is ringing an extension the system can optionally play ringback tone or Music on Hold to the caller.

The system allows the following types of transfers:

- **Screened Transfer**
  The transferring user announces the call to the destination before hanging up

- **Unscreened Transfer**
  The transferring party extends the call without an announcement.

- **Extension (Department) Groups Transfer**
  The Transferring party sends the call to a Department instead of an extension.

- **Transfer Without Holding**
  A user wishing to have a trunk call transferred to them presses the busy line key and waits for the call to complete. The system automatically sends them the call when the internal party to that call hangs up.

**Automatic On-Hook Transfer Operation**

With Automatic On-Hook Transfer, a Transfer goes through as soon as the transferring user hangs up. For example, extension 204 can answer a trunk, press HOLD, dial 205 and hang up. The system extends the call to extension 205. Without Automatic On-Hook Transfer, the call would stay on Hold at extension 204 when the user hangs up. To extend the call, the user at extension 204 would have to press TRFR or a Transfer Programmable Function key before hanging up.

Each method has advantages. Automatic On-Hook Transfer makes transferring calls easier. However, users have to be more aware of how they handle their calls on Hold. Without Automatic On-Hook Transfer, extending a call becomes a two-step operation - but separate from placing calls on Hold.

**Prevent Recall of Transferred Call**

The Class of Service program has an option that will allow you to prevent a Transferred call from recalling the originating extension if the call is not answered.

**Conditions**

None

**Default Setting**

Enabled.
• **Programming**

**15-07-01: Programming Function Keys**
Extension users may want a function keys programmed for Transfer (code 06).

**20-02-01: System Options for System Telephones - Retrieve the Line After Transfer**
Enable (1) or disable (0) an extension’s ability to answer a call after it’s been transferred, but before it’s answered.

**20-03-01: System Options for Single Line Telephones - SLT Call Waiting Answer Mode**
For a busy single line telephone, set the mode used to answer a camped-on trunk call:
- 0 = Press and release hookswitch to pick up waiting call
- 1 = Press and release hookswitch and dial Service Code 894 to answer waiting call

**20-06-01: Class of Service for Extensions**
Assign a Class Of Service (1-15) to extensions.

**20-11-06: Class of Service Options (Hold/Transfer Service) - Unscreened Transfer**
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to use Unscreened Transfer.

**20-11-07: Class of Service Options (Hold/Transfer Service) - Transfer Without Holding**
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to use Transfer Without Holding.

**20-11-08: Class of Service Options (Hold/Transfer Service) - Transfer Display**
In an extension’s Class of Service, enable (1) or disable (0) the extension’s incoming Transfer pre-answer display.

**20-11-11: Class of Service Options (Hold/Transfer Service) - Automatic On Hook Transfer**
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to use Automatic On Hook Transfer. If enabled, user must press HOLD and dial the extension number to Transfer the call. If disabled, a user must have a Transfer Programmable Function Key. To transfer the call, the user would press HOLD, dial the extension number, then press the Transfer Programmable Function key to complete the transfer.

**20-11-18: Class of Service Options (Hold/Transfer Service) - No Recall**
If an extension should not receive recalls of unanswered Transferred calls, disable this option (0=allow recalls, 1=prevent recalls).

**24-02-01: System Options for Transfer - Busy Transfer**
Prevent (0) or allow (1) extensions to transfer calls to busy extensions. If disabled, calls transferred to busy extensions recall immediately.

**24-02-03: System Options for Transfer - Delayed Call Forwarding Time**
If activated at an extension, Delayed Call Forwarding occurs after this interval (0-64800 seconds). This also sets how long a Transferred call waits at an extension forwarded to Voice Mail before routing to the called extension’s mailbox.

24-02-04: System Options for Transfer - Transfer Recall Time
Set the Transfer Recall Time (0-64800 seconds). An unanswered transferred call recalls to the extension that initially transferred it after this interval. This interval also sets how long a transferred call camps-on to a busy extension.

- **Related Features**
  - **Caller ID**
    Unscreened Transfers from voice mail will show pre-answer Caller ID information.
  - **Call Forwarding**
    With Transfer to Busy Extensions enabled (Program 24-02-01=1), Call Forwarding with Both Ringing offers a unique option. A transferred call will wait for either the forwarding or destination extension to become free. The call goes through to whichever extension becomes available first. If neither extension becomes free within the Transfer Recall Time, the call recalls the transferring extension.
  - **Meet Me Paging Transfer**
    Page a co-worker and have the call automatically Transfer when the co-worker answers the Page.
  - **Programmable Function Keys**
    When transferring, an extension user can press a One-Touch Key instead of dialing the extension number.
  - **Serial Call**
    Serial Call is a method of transferring a call so it automatically returns to the transferring extension.

- **Operation**

Transferring Trunk Calls

To Transfer a trunk call to a co-worker’s extension:

1. At system phone, press HOLD.
   OR
   At single line telephone, hookflash.
   
   You hear Transfer dial tone.

2. Dial co-worker’s extension number.

   If the extension is busy or doesn’t answer, you can dial another extension number or press the line key to return to the call. In addition, you may be able to hang up and have the call Camp-On. SLT users can retrieve the call by pressing hookflash. If a call has been transferred and the single line user has hung up the handset, the call be can retrieved by Dialling 815 and the extension number to which it had been transferred.

3. Announce call and hang up.

   If you don’t have Automatic On Hook Transfer, you must press TRFR or your Transfer Programmable Function Key to Transfer the call. If your co-worker doesn’t want the call, press the flashing line key to return to the call. SLT users can retrieve the call by pressing hookflash. If a call has been transferred and the single line user has hung up the handset, the call be can retrieved by Dialling 815 and the extension number to which it had been transferred. If you don’t want to screen the call, hang up without making an announcement.
To answer a call transferred to your extension:

1. Lift the handset when a co-worker announces the call.

Transferring Without Holding

To Transfer without holding (system phone only):

1. Lift handset.
2. Press busy line key.
3. When original caller hangs up, you are connected.

Transferring Intercom Calls

To Transfer your Intercom call:

1. At system phone, press HOLD.
   OR
   At single line telephone, hookflash.
2. Dial extension to receive your call.
   
   If the extension is busy, doesn’t answer or does not want the call, you can dial another extension number or press the lit CALL key to return to the call. In addition, you may be able to hang up and have the call Camp-On. SLT users can retrieve the call by pressing hookflash. If a call has been transferred and the single line user has hung up the handset, the call be can retrieved by Dialling 815 and the extension number to which it had been transferred.

3. Announce your call and hang up.

   With Automatic On Hook Transfer
   When you hang up, the call is automatically transferred.

   Without Automatic On Hook Transfer
   You must press your Transfer Programmable Function Key to Transfer the call. If your co-worker just speaks toward their phone to answer, the Intercom call being transferred disconnects when you hang up. To Transfer the call unscreened, press your Transfer Programmable Function Key and hang up without making an announcement.
Trunk Group Routing

• Description

Trunk Group Routing sets outbound call routing options for users that dial the Trunk Group Routing code (0) for trunk calls. Trunk Group Routing routes calls in the order specified by system programming. If a user dials 0 and all trunks in the first group are busy, the system may route the call to another group.

Conditions

None

Default Setting

Enabled. All trunks are in Group 1.

• Programming

11-01-01: System Numbering
Set up a Service Code for Alternate Trunk Route Access.

11-09-01: Trunk Access Code
If required, change the single-digit Trunk Access Code (normally 0). If you change this code, you must also review the settings in 11-01 for the new code selected.

11-09-02: Trunk Access Code - Alternate Trunk Route Access Code
Assign the Service Code set up in 11-01 for Alternate Trunk Route Access.

14-05-01: Trunk Groups
Assign trunks to trunk groups (1-25).

14-06-01: Trunk Group Routing
Set up an outbound routing table (1-25) for trunk groups assigned in Program 14-05.

14-07-01: Trunk Access Map Setup
Access Map programming may limit Trunk Group Routing options.

15-06-01: Trunk Access Map for Extensions
Access Map programming may limit Trunk Group Routing options.

15-07 : Programming Function Keys
Assign a function key for Trunk Group Routing access (code *02 + trunk group 01-25).

21-02-01: Trunk Group Routing for Extensions
Assign the routes set in Program 14-06 to extensions.

21-03-01: Trunk Group Routing for Trunks
Assigns the routes set in Program 14-06 for use with Automatic Extended Call Forward.

21-15-01: Alternate Trunk Route for Extensions
Designate the trunk route accessed when a user dials the Alternate Trunk Route Access Code assigned in Program 11-09-02. Trunk Group Routing is set up in Program 14-06.
23-03-01: Universal Answer/Auto Answer
Assign trunk routes set in Program 14-06 to extensions for Universal Answer. If the call ringing the paging system is in an extension’s assigned route, the user can dial the Universal Answer code (#0 872) to pick up the call. This program also allows an extension user to automatically answer trunk calls ringing other extensions, based on Trunk Group Routing programming (defined in Program 14-06). (Trunk Group Routing=1-25)

25-10-01: Trunk Group Routing for DISA
Assign the Trunk Group Route chosen when a user places a DISA call into the system and dials 0. The Trunk Group Routing is defined in Program 14-06. If the system has ARS, dialling 0 accesses ARS. The route chosen is based on the DISA Class of Service, which is determined by the password the caller dials.

25-12-01: Alternate Trunk Group Routing for DISA
Define the trunk route selected when a DISA caller dials the Alternate Trunk Access Code assigned in Program 11-09-02. The route selected is based on the DISA caller’s Class of Service, which is in turn determined by the password the caller dials. Program 14-06 is used to set up the Trunk Group Routing.

• Related Features
  • Automatic Route Selection (ARS)
    Dialling 0 activates ARS, overriding trunk group routing.
  • Central Office Calls, Placing
    Instead of using Trunk Group Routing, an extension user can place a trunk call by:
    - Pressing a line key
dialling a trunk service code
    - Pressing a trunk group key (refer to the Trunk Group feature)
dialling a trunk group service code (refer to the Trunk Group feature).
  • Programmable Function Keys
    Programmable Function Keys simplify placing calls using Trunk Group Routing.
  • Ringing Line Preference
    The system uses Trunk Group Routing programming (Program 14-06) when setting up Ringing Line Preference.
  • Trunk Groups
    Use trunk group programming to set the order in which users access trunks within a specific trunk group.

• Operation
To place a call using Trunk Group Routing:
1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 0.
3. Dial number.
   OR
1. At system phone, press Trunk Group Routing key (PGM 15-07 or SC 852: *05).
   
   Also see the "Loop Keys" feature.

2. Dial number.
Trunk Groups

• Description

Trunk Groups let you optimize trunk usage for incoming and outgoing calls. With Trunk Groups, users can have loop (rotary) keys for trunk calls. Incoming trunk group calls ring these loop keys. For outgoing calls, the user presses a loop key to access the first available trunk within the group. You set the access order in trunk group programming. The system allows up to 25 trunk groups.

Loop keys give an extension user more available function keys, since the user doesn’t need a separate line key for each trunk. The user only needs one loop key for each trunk group. This simplifies placing and answering calls.

Conditions

None

Default Setting

All trunks are in group 1.

• Programming

10-09-01: DTMF and Dial Tone Circuit Setup
Allocate the circuits on the 308M or DSPDB PCBs for DTMF receiving.

14-05-01: Trunk Groups
Assign trunks to trunk groups (1-25).

14-07-01: Trunk Access Map Setup
Assign trunks to Access Maps (1-51).

15-06-01: Trunk Access Map for Extensions
Assign Access Maps (1-51) to extensions.

15-07-01: Programming Function Keys
Assign function keys for trunk group access (code *02 + group) or loop keys (code *05 + 0=incoming, 1=outgoing, 2=both + trunk group (001-100). If loop keys are used, assign the loop key to a trunk group in Program 15-13.

20-02-02: System Options for System Telephones - Trunk Loop Access Key Operating Mode
Set the operating mode of the extension’s trunk group keys (Incoming and Outgoing Access = 0, Outgoing Access =1, Incoming Access = 2).

• Related Features

• Abbreviated Dialling
  Unless a user preselects a trunk, Trunk Group programming selects the trunk Abbreviated dialling users for trunk calls.

• Automatic Route Selection
  If a user dials a number that is not programmed in ARS, the system can route the call to a trunk group.

• Central Office Calls, Placing
  Instead of using Trunk Groups, an extension user can place a trunk call by:
Pressing a line key
dialling a trunk access code
dialling a Trunk Group Routing code (0) - refer to the Trunk Group Routing feature

- **Direct Inward Dialling (DID)**
  All DID trunks of the same type should be placed in the same trunk group. These trunk groups must then be assigned to a DID Translation Table.

- **Loop Keys**
  Program a function key as a Loop Key to allow an extension user to answer incoming trunks within a trunk group.

- **Programmable Function Keys**
  Function keys simplify placing and answering trunk group calls.

- **Ring Groups**
  Trunks ring extensions according to Ring Group programming.

- **Trunk Group Routing**
  Trunk Group Routing sets outbound call routing options for users that dial the Trunk Group Routing code (0) for trunk calls.

**Operation**

**To place a call over a trunk group:**
1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 804.
3. Dial trunk group number (1-9 or 01-25 ).
4. Dial number.
   OR
   1. Press trunk group key (PGM 15-07 or SC 852: *02 + group)
   2. Dial number.

**To answer an incoming trunk group call:**
1. Lift handset.
2. Press flashing trunk group key.
Trunk Queuing/Camp On

- **Description**

  Trunk Queuing permits an extension user to queue (wait in line) on hook for a busy trunk or trunk group to become free. The system recalls the queued extension as soon as the trunk is available. The user does not have to manually retry the trunk later. Trunk Queuing lets the caller know when the call can go through. If the extension user does not answer the Trunk Queuing ring, the system cancels the queue request.

  With Trunk Camp On, an extension user can queue (wait in line) off hook for a busy trunk or trunk group to become free. The caller connects to the trunk when the trunk becomes free. As with Trunk Queuing, the user does not have to manually retry the trunk later.

  Any number of extensions may simultaneously queue or Camp On for the same trunk or trunk group. When a trunk becomes free, the system connects the extensions in the order that the requests were left.

- **Conditions**

  None

- **Default Setting**

  Enabled.

- **Programming**

  15-07-01: Programming Function Keys
  Assign a function key for Trunk Queuing and Trunk Camp On (code 35).

  20-01-08: System Options - Trunk Queuing Callback Time
  Set the Trunk Queuing Callback Time (0-64800 seconds). Trunk Queuing Callback rings an extension for this interval.

  20-01-09: System Options - Callback/Trunk Queuing Cancel Time
  Set the Callback/Trunk Queuing Cancel Time (0-64800 seconds). The system cancels an extension’s Callback or Trunk Queuing request after this interval.

  20-06-01: Class of Service for Extensions
  Assign a Class Of Service (1-15) to an extension.

  20-11-07: Class of Service Options (Hold/Transfer Service) - Transfer Without Holding
  Disable (0) an extension’s ability to use Transfer Without Holding.

- **Related Features**

  - **Automatic Route Selection**
    With Automatic Route Selection, Trunk Queuing automatically queues for the least costly route.

  - **Call Waiting/Camp On and Callback**
    A user can Camp On or leave a Callback request for an extension.

  - **Central Office Calls, Placing**
Other programmed options for outgoing calls can affect how a call is placed. Check or program these options as needed (ex: access, line/loop keys, etc.).

- **Programmable Function Keys**
  Function keys simplify Trunk Queuing operation.

**Operation**

**To queue for a busy trunk:**
1. Try to access busy trunk.
2. Press Trunk Queuing/Camp On key (PGM 15-07 or SC 851: 35).
3. Hang up to leave a Trunk Queuing request.
   OR
   Wait off hook to Camp On to the trunk.

**To answer when Trunk Queuing calls you back:**
1. Lift handset.

**To cancel a Trunk/Camp On request:**
1. At system phone, press a SPK key.
   OR
   At single line telephone, lift handset.
2. Dial 870.
3. At system phone, press SPK to hang up.
   OR
   At single line telephone, hang up.
Trunk to Trunk Forwarding

• Description

Trunk to trunk forwarding refers to the forwarding of incoming trunk calls off premise. The forward can be set for each trunk and each trunk can have its own destination number that the calls are forwarded to.

The feature can be set for trunk ports that are set as Normal (Type 0 in Program 22-02-01) and can be used for COI and ISDN trunk ports.

The call forward is controlled by service codes. The destination can also be changed by the user for each night mode (1-8).

When call forward is set all incoming calls to the trunk will be forwarded immediately.

The destination of the call forward is saved in an Abbreviated Dial bin, the bin is defined by Program 24-04-01. If a different call forward destination is required for each night mode then a different Abbreviated Dial bin must be defined for each night mode.

A call that is forwarded will be disconnected after timers 25-07-07 & 08.

The outgoing trunk route is defined by Program 21-03-01. A free trunk within this route will be used when a call is forwarded.

Trunk to trunk transfer must be enabled for each trunk by Program 14-01-13. If this item is not enabled the call forward can not be set.

Conditions

A. Analogue trunks must have disconnect clear enabled to ensure the lines are cleared when a call is disconnected.
B. Trunk to trunk call forward can not be set from an analogue SLT.

Default Setting

The service code to enable trunk to trunk forwarding is 833.
The service code to disable trunk to trunk forwarding is 834.
The service code to set/change the destination number is 835.
Abbreviated Dial bin 1999 is used as the call forward destination for all night modes.
The disconnect timers are set to give a warning tone after 30 seconds and then disconnect after another 15 seconds.
The outgoing trunk route is not defined.
Trunk to trunk transfer is disabled.
Disconnect clear is not set.
Trunk to trunk call forward setting is enabled in Class of Service.

• Programming

11-10-06 : Service Code 833
11-10-07 : Service Code 834
11-10-08 : Service Code 835

  • Trunk to Trunk Transfer
  • Call Forward Off Premise
  • Call Forward to Abbreviated Dial Bin
  • Department Group Call Forward

• Operation
  3. To set the destination number for each trunk port.
  4. Press SPK to go off hook.
  5. Dial 835.
  6. Dial the trunk port number (001 to 200).
  7. Dial the night mode number (1 to 8).
  8. Dial the off premise destination number (do not include any trunk access digits).
  9. Press HOLD to set the destination for other night modes.
 10. Press SPK to hang up.

Note that at step 5 the destination number will be saved to the Abbreviated Dial bin number specified by Program 24-04-01 for the chosen night mode.

If the same Abbreviated Dial bin is also used for other night modes then you do not need to set them separately. For example at default bin number 1999 is used for all night modes so when a night mode destination number is set for any night mode it will be used for all night modes.

To set the call forward for incoming calls to a trunk:
  1. Press SPK to go off hook.
  2. Dial trunk to trunk call forward service code - 833.
  3. Dial the trunk port number (001 to 200).
  4. Press SPK to hang up.
  5. Repeat steps 1 to 4 for further trunk ports.

To cancel the call forward for incoming calls to a trunk:
  1. Press SPK to go off hook.
  2. Dial trunk to trunk call forward cancel service code - 834.
  3. Dial the trunk port number (001 to 200).
  4. Press SPK to hang up.
  5. Repeat steps 1 to 4 for further trunk ports.
Trunk to Trunk Transfer

• Description

Trunk to trunk transfer refers to the connection of any two trunk ports together.

• Hold and Transfer.
  An extension user places one trunk call on hold and then either makes an outgoing call, answers an incoming call or retrieves a call from hold and transfers the two trunk calls together.

• Withdraw from Conference.
  An extension user sets up a conference call with two (or more) trunk calls and then withdraws from the conference, leaving the trunk callers connected.

• Extension User sets Call Forward Off Premise.
  An incoming trunk call is routed to an extension with call forward off premise. The user can set call forward off premise by setting call forward to an Abbreviated Dial bin or by Service Code 713+6+Trunk Access Code+off premise number.

• A Trunk is routed directly Off Premise.
  The Topaz is configured to route the incoming DDI trunk directly to an off premise number. This is set in Program 22-11-02 by entering the trunk access code followed by the off premise extension number as the target for the DDI number e.g. 901509643111.

Conditions

A. Two outgoing analogue trunks can not be connected together, this is because a disconnect clear signal is not generated by the PSTN for calls originated by the PBX.

B. The following tables show the settings required to allow the various trunk to trunk options.
  For each call type the programming required is listed, use the key below for each Program number.
  A - Program 14-01-13 Trunk to Trunk Transfer
  B - Program 14-02-12 Network Disconnect Clear Signal for Analogue trunks

<table>

</tbody>
</table>
Default Setting
Trunk to Trunk transfer is disabled, Program 14-01-13.
Network Disconnect signal is disabled, Program 14-02-12.
Off Premise call forward is disabled, Program 20-11-12.
Trunk to Trunk disconnect timer is set to 1800 Seconds, Program 24-02-07.
DISA conversation (Trunk to Trunk conversation) timer is set to 45 Seconds, Program 25-07-07 & 08.
Route option for DISA class 1 is disabled, Program 20-14-02.
Trunk route for all trunk ports is set to 0 (None), Program 21-03-01.
Trunk to Trunk Transfer restriction is set to 'not restricted’ for all classes of service, Program 20-11-14.

• Programming

Disconnect timers for trunk to trunk calls.
Program 24-02-07, Trunk to Trunk disconnect timer, will disconnect all call types. The default setting is 1800 Seconds (30 minutes).
Program 25-07-07 & 08, DISA disconnect timers, will disconnect calls routed automatically by the Aspire. This includes calls forwarded off premise and trunks routed directly off premise.

Trunk Routing for calls routed directly off premise.
Program 20-14-02 - An ISDN DDI routed directly off premise must have the Route Option enabled for DISA Class 1.
Program 21-03-01 - An ISDN DDI routed directly off premise will need the trunk route defining for each incoming ISDN trunk port.

Trunk to Trunk transfer restriction.
Program 20-11-14 - Must be set to 0 (Not restricted) to allow an extension to perform Hold and Transfer of two trunk calls.

14-01-13 : Trunk to Trunk Transfer
14-02-12 : Network Disconnect Signal
20-11-12 : Off Premise Call Forward
20-11-14 : Trunk to Trunk Transfer Restriction
20-14-02 : Route Option for DISA
21-13-01 : Trunk Outgoing Route Access
24-02-07: Trunk to Trunk Disconnect Timer
25-07-07 & 08 : DISA Conversation Timer

Voice Mail

• Description

The DSPDB daughter board with a CF-( )1 CompactFlash card fitted provides the option for the Voice Mail System capable of the following features:

• Leaving a Message
  Voice Mail lets a system phone extension user easily leave a message at an extension that is unanswered, busy or in Do Not Disturb. The caller just presses their Voice Mail key to leave a message in the called extension's mailbox. There is no need to call back later. A VRS announcement can periodically remind users that they have messages waiting to which they have not responded.

• Personal Greeting/Mailbox
  Each extension user may be assigned a voice mail box with their own personalised greeting message. Up to 3 different greeting messages may be recorded for each mailbox and enabled one at a time when appropriate. Up to 300 mail boxes may be assigned to extensions, virtual extensions, department groups, etc.

• Personal Automated Attendant
  An extension user can forward their calls to Voice Mail on an Immediate or Busy/No Answer condition. Once forwarded, calls to the extension connect to that extension's mailbox and receive the personalised greeting message. The caller can leave a message in the mailbox instead of calling back later.

• Single Digit Dialling from Greeting Message
  During the voice mail greeting message, the caller may be given the option to be transferred externally (via a Common/Personal Abbreviated Dialling Bin) or internally (Extension, Department Group, Virtual Extension) by dialling a single digit, as directed by the personalised mailbox greeting. Each mailbox has its own set of single digit dialling destinations. Music on Hold or Ringback Tone can be played while the caller is being transferred. Note that the single digit dialling options remain the same for each of the 3 greeting messages. Use different digits for each greeting if required.

• Conversation Record
  While on a call, an extension user can have Voice Mail record the conversation. The system phone user may be required to press the Voice Mail Record key, or this process can be automatic. Once recorded, the Voice Mail system stores the conversation as a new message in the user's mailbox. After calling their mailbox, a user can save, edit or delete the recorded conversation.

• Remote Message Notification
  Remote message notification may be sent to a user whenever a new message is left in their mailbox. The message notification facility may call an extension, virtual extension, department group or an external number (e.g. mobile phone).

• Message Centre Keys
  When there is more than one person sharing the same system phone, each may have their own mailbox with individual voice mail message keys. Each person can then see if they have a new message.
• **Single Line Telephone Access**
  Analogue telephone users can forward their call to voice mail on an Immediate or Busy/No Answer condition. When retrieving messages by dialling into the voice mail system, analogue telephone users will automatically login to their own mailbox, only needing to enter their password if set. Analogue telephones user receive indication of a new voice mail message via either a flashing Message Waiting Lamp (if fitted), VRS Announcement (if DSPDBU card is installed), Stutter Dial Tone, or Intermittent Ringing Tone.

• **Remote Voice Mail Access**
  You may retrieve your voice mail messages or change your mailbox settings remotely by dialling in to your voice mail greeting message and dialling * Password #. You then have full access to all voice mail service codes. Dial * # to exit from your mailbox and enter an other mailbox number.

**Conditions**
- 300 mailboxes max
- 100 messages per mailbox max.
- 3 selectable personal greetings

**Programming**

11-12-39: *Service code setup (for Service Access) - VRS Access*
Define the service code a user should dial to access the Voice Mail

13-01-01: *Abbreviated Dialling Auto Outgoing Call Mode*
Consider this Program when single-digit dialling options are required with the destination assigned as an Abbreviated Dialling Bin. To allow both extension numbers and outside numbers to be stored in Personal Abbreviated Dialling bins, assign PRG 13-01-01 (Abbreviated Dialling Auto Out-going Call Mode) to 1 = Extension outgoing mode. In this mode, a trunk access code (normally 0) must precede all external numbers.

When PRG 13-01-01 is set to 0 = Trunk outgoing mode, all numbers stored in abbreviated dialling bins are assumed to be external numbers, hence a trunk access code is not required.

of three greetings
14-09-01: Conversation Recording destination for trunks
Recording destination dial number - for DSPDB Voice Mail enter code in command 11-12-39

14-09-02: Automatic Recording
Defines whether to automatically record on call answer (0 = no, 1 = yes).

14-09-03: Recording contents storing method
0 = specifies by dialling, 1 = own mailbox. If set to 0 the voice mail will 'call back' and require a mailbox be entered to store recording.

14-09-04: Automatic recording for outgoing call
Defines whether outgoing calls are automatically recorded (0 = off, 1 = on).

15-07-01: Programmable function keys
Setup voice mail related function keys on your keyphone or DSS/DLS console to allow more efficient use of Voice Mail.

Code 67 + mailbox number - Mail box key for direct access to mailbox
Code 68 + 0 - Voice Mail service - skip message forward and replaying
Code 68 + 1 - Voice Mail service - skip message backward and replaying
Code 69 + 0 - Conversation record - Start and stop manual conversation record
Code 69 + 1 - Conversation record - Delete a recorded conversation and re-record
Code 69 + 2 - Conversation record - Cancel call record and delete
Code 70 + mailbox number - Auto Attendant setting, set call forward to DSPDB Voice Mail.
Code 71 + mailbox number - Switch answering message, select one

15-12-01: Conversation recording destination for extensions
Recording destination dial number - for DSPDB Voice Mail enter code in 11-12-39. If both programs 14-09 and 15-12 define a destination, the destination in 15-12 will be used.

15-12-02: Automatic recording for extensions
Defines whether to automatically record trunk calls on answer (0 = no 1 = yes).

15-12-03: Recording contents storing method
0 = specifies by dialling, 1 = own mailbox. If set to 0 the voice mail will 'call back' and require a mailbox to be entered to store recording.

15-12-04: Automatic recording for outgoing call
Defines whether outgoing calls are automatically recorded.

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to extensions.

20-07-13: Class of Service Options (Administrator Level) - VRS Record
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to record, erase and listen to VRS messages.
22-05-01: Incoming trunk ring group assignment
Selects the ring group the trunk will ring on a per trunk per day/night mode basis. To select the DSPDB Voice Mail voice mail enter 101.

24-02-02: MOH or Ringback Tone on Transferred Calls
If the caller dials a digit during the automated attendant message and a transferred has been initiated, specify whether they will hear either Ring Back Tone (RBT) or Music On Hold (MOH), until the call is either answered or terminated.

40-01-01: Voice mail basic setup - Voice channels
Number of channels of DSPDB from 0-16 dedicated to voice mail.

40-01-02: Voice mail basic setup - Time stamp
Defines whether messages are time stamped (1 = enabled, 0 = disabled).

40-01-03: Voice mail basic setup - Conversation record for after transfer
Defines whether to continue conversation record after transfer (1 = yes, 0 = no).

40-01-04: Voice mail basic setup - Auto. attendant for non-existing extensions
Defines whether mailboxes without a telephone automatically have auto attendant set (0 = disable, 1 = enable).

40-01-05: Voice mail basic setup - Maintenance time
Defines the time that the voice mail performs self maintenance of DSPDB compact flash daily. (00:00 - 23:59)
Note: the voice mail will close down whilst performing this action.

40-01-06: Voice mail basic setup - Automatic message erase
Defines the number of days a new message will remain in a mailbox before it is auto erased: 0 - 180 days.

40-02-01: Mailbox setup - Mailbox number
This is the actual mailbox number up to 8 digits, if the mailbox is for an extension it should match the extension number. Up to 300 mailboxes can be assigned.

40-02-02: Mailbox setup - Mailbox password
This defines the password for a particular mailbox. If using this command it is set at 4 digits if a password less than this length is required it should be set by entering individual mailboxes. If no password is required, leave blank.

40-02-03: Mailbox Setup - Single Digit Dialling
Specify whether single digit dialling options shall be available during the voice mail greeting message for each voice mailbox (0 = Disable, 1 = Enable). This facility may also be enabled/disabled by the mailbox user by dialling Voice Mail Service Code 68#.

40-03-01: Message recording setup - voice mail recording time
Sets the maximum recording time of answering service message recording (1 to 10 minutes).
40-03-02: Message recording setup - Guidance message in case recording not allowed
When the answering service cannot record messages, sets whether to transmit the answering message of the mailbox or the fixed guidance (0 = fixed guidance, 1 = Answering message of mailbox).

40-03-03: Message recording setup - Automatic answering transmission for busy line
Defines whether to automatically play the answering message for a busy extension (0 = disable, 1 = enable).

40-04-01: Live recording setup - operation mode when mailbox is not defined
Defines whether to record conversation in temporary box or callback extension to enter mailbox if mailbox is not defined in 14-09-01 or 15-12-01 (0 = temporary box, 1 = callback operation).

40-04-02: Live recording setup - Temporary box number
Sets the box number to keep the unknown destination messages, 0 to 300 as defined in 40-02.

40-04-03: Live recording setup - Live recording display
Enables or disables the system’s ability to display the recording feature active (0 = disabled, 1 = enabled).

40-05-01: Call information setup (for notification) - Maximum number of outgoing calls
Sets the maximum number of calls the voice mail can make simultaneously from 0 to 16, if set to 0 voice mail will not notify.

40-05-02: Call information setup (for notification) - Trunk route number
Sets the trunk route number to use for outgoing calls from 0 to 100, if set to 0 voice mail will not notify.

40-05-03: Call information setup (for notification) - ISDN calling number setting
Sets the caller number when an outgoing call is made using an ISDN line. Maximum 16 digits 0-9, *, and #.

40-05-04: Call information setup (for notification) - Calling interval (extension)
Sets the calling interval when calling an extension, 1 to 30 minutes.

40-05-05: Call information setup (for notification) - Calling interval (trunk)
Sets the calling interval when calling a trunk line, 1 to 30 minutes.

40-05-06: Call information setup (for notification) - Maximum calling count (extension)
Sets the maximum number of times to call an extension, 1 to 100.

40-05-07: Call information setup (for notification) - Maximum calling count (trunk)
Sets the maximum number of times to call an extension, 1 to 100.

40-06-01: Trunk answering Service Setting - Operation mode
Defines on a per trunk per day/night mode whether to enable General Auto Attendant = answering and recording, 1 = not used.
40-06-02: Trunk answering Service Setting - transmission guidance number
Sets the Guidance message number from 1 to 48 played on a per trunk per day/night mode basis. If set to 0 the fixed guidance is transmitted.

40-06-03: Trunk answering Service Setting - Message box number
Sets the message box number used for storing messages for trunk answering. 0 to 300 as defined in 40-02.

40-09-01: Voice Mail Multiple Address Group setup
Defines up to 10 broadcast groups containing up to 100 mailboxes as defined in 40-02.

40-13-01: Mailbox Setup - Single Digit Dialling Destination
For each mailbox requiring Single Digit Dialling options, specify the destination for each digit to be dialled by the caller.

Specify per Mailbox number (001~300), per digit dialled (0~9):
- Extension Number (up to 4 digits),
- Department Group Pilot Number (up to 4 digits),
- Voice Mail Master Number (up to 4 digits), or
- Common/Personal Abbreviated Dialling Bin Number (enter 4 digits).

By default, Mailbox numbers 001~024 are assigned as follows:
- Dial 1 = Personal Abbreviated Dialling Bin 918
- Dial 2 = Personal Abbreviated Dialling Bin 919
- Dial 0, 3~9 = Not Specified

• Related Features
  - Direct Inward Dialling (DID) or Direct Dial In (DDI)
    DID or DDI trunks can be directed at the DSPDB Voice Mail
  - Direct Inward Line (DIL)
    DIL trunks can be directed at the DSPDB Voice Mail
  - Programmable Function Keys
    Key telephones can have function keys enabled for ease of voice mail functionality
  - Date & Time setup
    Sets the date and time transmitted on guidance
  - Night Service
    Sets the operation mode for the system

• Operation

**Voice Mail Function Keys**
We recommend setting up Voice Mail related function keys on your Keyphone or DSS console to allow you to use Voice Mail more efficiently. (See also Programmable Function Keys.)

**Programming a Voice Mail Key:**
1. Press SPK key.
2. Dial 851.
3. Press the key you want to program.
4. Enter the 2-digit function number, followed by any additional information required (see
table below).

5. Press **HOLD**.

**Voice Mail Service Codes**

In order to use the various services provided by voice mail, operation codes must be input.

There are two types of operation codes:

1. Service code: following the voice guidance, a code to select the service.
2. Option code: a number to select optional settings or operations of a service.

Mailbox Password

You can set a four digit password for your mailbox.

Setting Your Password:
System Phone

1. Press Voice Mail Access key (PGM 15-07 or SC 851:67 + Mailbox No.).
2. Dial service code 65#.
3. Dial new four digit password.
4. Dial #.
5. Your password will be spoken back to you.
6. Dial 0# to confirm (or 1# to cancel).
7. Hang up.

Single Line Telephone

1. Press SPK or lift handset.
2. Dial 884 (default).
3. Enter mailbox number (and password).
4. Dial service code 65#.
5. Dial new four digit password.
6. Dial #.
7. Your password will be spoken back to you.
8. Dial 0# to confirm (or 1# to cancel).
9. Hang up.

Deleting Your Password:
System Phone

1. Press Voice Mail Access key (PGM 15-07 or SC 851:67 + Mailbox No.).
2. Dial service code 65#.
3. Dial 9999.
4. Dial #.
5. Dial 0# to confirm (or 1# to cancel).
6. Hang up.
**Single Line Telephone**

1. Press **SPK** or lift handset.
2. Dial **884** (default).
3. Enter mailbox number (and password).
4. Dial service code **65#**.
5. Dial **9999**.
6. Dial **#**.
7. Dial **0#** to confirm (or **1#** to cancel).
8. Hang up.

**Voice Mail Messages**

**Listening to Messages:**

**System Phone**

1. Press Voice Mail Access key (PGM 15-07 or SC 851:67 + Mailbox No.).
2. Messages are automatically played back.

**Single Line Telephone**

1. Press **SPK** key or lift handset.
2. Dial **884** (default).
3. Enter mailbox number (and password).
4. Dial service code **1#**.
5. Listen to messages.

**Recording a Message to Send to a Mailbox:**

1. Press **SPK** key or lift handset.
2. Dial **884** (default).
3. Dial *****.
4. Dial the mailbox number you wish to send a message to.
5. Dial **#**.
6. Record message.
7. Hang up.

**Recording a Message to Send to a Broadcast List:**

It is possible to send a message to up to 100 mailboxes simultaneously. This feature is set up at installation and can create up to 10 Broadcast lists containing up to 100 mailboxes in each using programming command 40-09-01.

**System Phone**

1. Press Voice Mail Access key (PGM 15-07 or SC 851:67 + Mailbox No.).
2. Dial service code **2#**.
3. Dial abbreviated broadcast list number.
4. Record Message.
5. Hang up.
Single Line Telephone

1. Press SPK key or lift handset.
2. Dial 884 (default).
3. Enter mailbox number (and password).
4. Dial service code 2#.
5. Dial abbreviated broadcast list number (0-9).
6. Record Message.
7. Hang up.

Transferring a Message to a Broadcast List:

1. After the message playback has ended,
2. Dial 28#.
3. Dial abbreviated broadcast list number (0-9).
4. Dial #.
5. Dial 0# to accept.
6. Hang up.

Voice Mail Access from Outside Line:

1. Dial in to listen to your personal greeting.
2. After your greeting has ended, two short beeps will be heard.
3. Enter your password (if set).
4. Dial #.
5. You now have access to the service code options for your mailbox,
   (e.g. dial 1# to listen to your messages).

   Note: Mailbox password must be set before external access is allowed

Personal Answering Machine Emulation

(External Voice Mail Integration Only - Not available with DSPDB Voice Mail)

System Phone

2. Dial 1 to Set, or 0 to Cancel.
3. Dial Call Forwarding type:
   2 = All calls
   3 = Outside calls only
   4 = Intercom calls only
4. Press SPK to hang up.

Single Line Telephone

1. Press SPK key or lift handset.
2. Dial 888 (Call Forward to Station).
3. Dial 1 to Set, or 0 to Cancel.
4. Dial Call Forwarding type:
5. 2 = All calls
   3 = Outside calls only
4 = Intercom calls only
6. Hang up.

Personal Automated Attendant

There are 3 greeting messages available for each mailbox. Service codes are available to record, play or erase each individual message.

Setting Personal Automated Attendant Mode

Multiline Telephone:
1. Press Automated Attendant key (SC 851:70) repeatedly until the desired call forward setting is made - All, No Answer, Busy, Busy/No Answer, Cancel.
-OR-
1. Lift Handset and dial voice mail access code 884 (default).
2. Enter mailbox number and password (if set).
3. Dial the required service code:
   67#, to toggle Forward Busy/No Answer on and off (default: off).
   62#, to toggle Forward All on and off (default: off).
4. Hang up.

Single Line Telephone:
1. Lift Handset and dial voice mail access code 884 (default).
2. Enter password (if set). Mailbox number is not required.
3. Dial the required service code:
   67#, to toggle Forward Busy/No Answer on and off (default: off).
   62#, to toggle Forward All on and off (default: off).
4. Hang up.

Enabling Single Digit Dialling During Voice Mail Message

Multiline Telephone:
2. Enter password (if set).
3. Dial service code 68# to toggle facility on and off (default: off).
4. Hang up.
-OR-
1. Lift Handset and dial voice mail access code 884 (default).
2. Enter mailbox number and password (if set).
3. Dial service code 68# to toggle facility on and off (default: off).
4. Hang up.

Single Line Telephone:
1. Lift Handset and dial voice mail access code 884 (default).
2. Enter password (if set). Mailbox number is not required.
3. Dial service code 68# to toggle facility on and off (default: off).
4. Hang up.

**Storing Single Digit Dialling Destinations**

By default, destinations for digits 1 and 2 are specified by storing them in Personal Abbreviated Dialling bins 918 and 919 respectively.

**Multiline Telephone:**

1. Press **CALL** key.
2. Dial **853**.
3. Dial the Abbreviated Dialling bin number (default: dial 1 = 918, dial 2 = 919).
4. Dial the telephone number you want to store:
   - Extension number (up to 4 digits), or
   - Outside number (trunk access code, e.g. 0, followed by telephone number).
5. Press **HOLD**.
6. Enter the associated name, using the dial pad characters.
7. Press **HOLD**.
8. Press **SPK** to hang up.

**Single Line Telephone:**

SLT's cannot store abbreviated dialling numbers. Use WebPro/PCPro to store Personal Abbreviated Dialling numbers for SLT ports. Or, specify in system programming the use of Common Abbreviated Dialling bins (in PRG 40-13-01), then enter the required numbers using an MLT.

**To Record a Greeting Message:**

**System Phone**

1. Press Voice Mail Access key (SC 851:67)
2. Dial service code (see table below)
3. Record your message, after the beep.
4. Dial **9#** to end the recording.
5. Hang up.

**Single Line Telephone**

1. Lift Handset.
2. Dial **884** (default).
3. Enter password.
4. Dial service code (see table below).
5. Record your message, after the beep.
6. Dial **9#** to end the recording.
7. Hang up.

<table>
<thead>
<tr>
<th>Number</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>32#</td>
<td>Record Message 1</td>
</tr>
<tr>
<td>33#</td>
<td>Record Message 2</td>
</tr>
<tr>
<td>34#</td>
<td>Record Message 3</td>
</tr>
</tbody>
</table>
To Listen to a Greeting Message:

**System Phone**
2. Dial service code (see table below).
3. Listen to the message and hang up.

**Single Line Telephone**
1. Lift Handset.
2. Dial 884 (default).
3. Enter password.
4. Dial service code (see table below).
5. Listen to the message and hang up.

<table>
<thead>
<tr>
<th>Code</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>31#</td>
<td>Play Message 1</td>
</tr>
<tr>
<td>35#</td>
<td>Play Message 2</td>
</tr>
<tr>
<td>36#</td>
<td>Play Message 3</td>
</tr>
</tbody>
</table>

To Erase a Greeting Message:

**System Phone**
2. Dial service code (see table below).
3. Dial 0# to erase message.

**Single Line Telephone**
1. Lift Handset.
2. Dial 884 (default).
3. Enter password.
4. Dial service code (see table below).
5. Dial 0# to erase message.

<table>
<thead>
<tr>
<th>Code</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>37#</td>
<td>Erase Message 1</td>
</tr>
<tr>
<td>38#</td>
<td>Erase Message 2</td>
</tr>
<tr>
<td>39#</td>
<td>Erase Message 3</td>
</tr>
</tbody>
</table>

Selecting a Greeting Message to Play:

**System Phone**
1. Press the Change Attendant Message key (code:71) repeatedly to toggle between the three answering messages. The lamp indicates which message is selected.

<table>
<thead>
<tr>
<th>Lamp State</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>Extinguished</td>
<td>Message 1</td>
</tr>
<tr>
<td>Steady</td>
<td>Message 2</td>
</tr>
<tr>
<td>Flashing</td>
<td>Message 3</td>
</tr>
</tbody>
</table>

A Single Line Telephone, or a System Phone without a ‘Change Attendant Message’ key, cannot change the Greeting Message.
If “Busy Line Attendant Feature” has been set at installation, answering message 3 will play when the extension is busy, therefore messages 1 & 2 can only be used normal answering for Automated Attendant.

**Message Notification**

It is possible for the voice mail system to automatically notify you when a message has been left in your mailbox. The message notification feature can be set to call an extension or an external number.

**Setting Message Notification:**

**System Phone**

2. Dial service code 61#.
3. Dial 1# for an extension call, 2# for an outside call, or 0# to cancel.
4. If either 1# or 2# is dialled, enter telephone number followed by # (it is not necessary to enter a trunk access code).
5. The dialled number will be read out.
6. Dial 0# to confirm (or 1# to cancel).
7. Hang up.

**Single Line Telephone**

1. Press SPK key or lift handset.
2. Dial 884 (default).
3. Enter mailbox number (and password).
4. Dial service code 61#.
5. Dial 1# for an extension call, 2# for an outside call, or 0# to cancel.
6. If either 1# or 2# is dialled, enter telephone number followed by # (it is not necessary to enter a trunk access code).
7. The dialled number will be read out.
8. Dial 0# to confirm (or 1# to cancel).
9. Hang up.

**Cancelling Message Notification:**

**System Phone**

2. Dial service code 61#.
3. Dial 0# to cancel.
4. Dial 0# to confirm (or 1# to cancel).
5. Hang up.

**Single Line Telephone**

1. Press SPK key or lift handset.
2. Dial 884 (default).
3. Enter mailbox number (and password).
4. Dial service code 61#.
5. Dial 0# to cancel.
6. Dial 0# to confirm (or 1# to cancel).
7. Hang up.

Conversation Recording

Conversation record is set up at install with the option of either Automatic or manual recording. Automatic conversation record automatically records the call upon answer whereas manual conversation recording requires the pressing of a function key to evoke the service.

To perform manual conversation record a key must be programmed on the keyphone. The Conversation Record key (code 69+0) is programmed via command 15-07-01 or service code 851.

Conversation recording can also be configured at installation via commands 14-09 and 15-12 to either record to your mailbox or to define the mailbox after the call has finished via a ‘callback’. If the callback option is specified the voice mail will call you back after the conversation has ended and you must specify a mailbox for storage.

AUTOMATIC RECORDING

Automatic Recording starts automatically when the call is answered.

MANUAL RECORDING

To Start Manual Recording:
1. Press the Manual Conversation Recording Key at any time during the conversation.

Storing a Manual Recording Message:
1. If prompted at end of call, enter the mailbox number where to store message.
   -OR-
   If Callback Mode is set, wait for the Voice Mail system to ring back after call has ended, then enter the mailbox number where to store the message, and dial #.

   *If you do not answer the callback or you do not specify a mailbox number, the recorded conversation will be deleted.*

Programming a Manual Conversation

Recording Key:
1. Press SPK key.
2. Dial 851.
3. Press the key you want to program.
4. Dial service code 69.
5. Dial 0.
6. Press HOLD.
Listening to a Recorded Conversation:

**System Phone**

2. Messages are automatically played back.

**Single Line Telephone**

1. Press SPK key or lift handset.
2. Dial 884 (default).
3. Enter mailbox number (and password).
4. Dial service code 1#.
5. Listen to messages.
Personal Automated Attendant (Voice Mail) Operation

External caller rings into system and hears RBT

Call follows Personal Auto Attendant set at extension (62# or 62#)

Voice Mail answers call

Caller hears the extension's Personal Voice Mail Greeting

1-digit dialing enabled (68#) ?

Example of a message: Please dial 1 for the operator, dial 2 for my mobile phone, or simply wait to leave a voice mail message after the beep.

NO

Dial 1

Dial 2

Dial Other

Wait

Caller hears RBT or MOH (PRG 24-02-02) while idle extension rings

Trunk seized and outside number dialed. Caller hears RBT or MOH (PRG 24-02-02)

Caller hears Busy Tone

Caller leaves a message and hangs up

If extension is busy, caller hears MOH/RBT (PRG 24-02-02) during sample

If number is busy, caller hears Busy Tone

If extension has Call Forward set to VM, go back to VM

If number does not answer, call will be disconnected by network

If digit dialed is not assigned in PRG 24-13-01, proceed to record a message
Voice Mail Integration

• Description

The Voice Mail Integration feature provides the necessary interface between the Xen Topaz system and a locally-provided Voice Mail system. When a station is forwarded to the Voice Mail system and a station user calls that forwarded station, the call goes directly to the individual personal mail box. If the Voice Mail system has the ability, a message can be sent to the station indicating a Voice Mail Message was received. This feature supports analogue external voice mail systems only.

An externally integrated Voice Mail system enhances the telephone system with the following features:

• **Call Forwarding to Voice Mail**
  An extension user can forward their calls to Voice Mail. Once forwarded, calls to the extension connect to that extension's mailbox. The caller can leave a message in the mailbox instead of calling back later. Forwarding can occur for all calls immediately, for unanswered calls or only when the extension is busy. When a user transfers a call to an extension forwarded to Voice Mail, the call waits for the Delayed Call Forwarding time before routing to the called extension's mailbox. This gives the transferring party the option of retrieving the call instead of having it go directly to the mailbox.

• **Leaving a Message**
  Voice Mail lets a system phone extension user easily leave a message at an extension that is unanswered, busy or in Do Not Disturb. The caller just presses their Voice Mail key to leave a message in the called extension's mailbox. There is no need to call back later. A Flashing Message Waiting Lamp and unique Dial Tone remind users that they have messages waiting to which they have not responded.

• **Transferring to Voice Mail**
  By using Transfer to Voice Mail, a system phone extension user can Transfer a call to the user's own or a co-worker's mailbox. After the Transfer goes through, the caller can leave a message in the mailbox.

• **Personal Answering Machine Emulation**
  A system phone user can have their idle extension emulate a personal answering machine. This lets Voice Mail screen their calls, just like their answering machine at home. If activated, the extension's incoming calls route to the user's subscriber mailbox. Once the mailbox answers, the user hears two alert tones followed by the caller's incoming message. The system phone user can then:

  - Let the call go through to their mailbox
  - Intercept the call before it goes to their mailbox (by pressing the CALL key on a system phone)
  - Reject the call before it goes to their mailbox
• **Voice Mail Overflow**
  If Voice Mail automatically answers trunks, Voice Mail Overflow can reroute those trunks to other extensions when all Voice Mail ports do not answer or, with certain software, are busy. During periods of high traffic, this prevents the outside calls from ringing Voice Mail for an inordinate amount of time. There are two types of Voice Mail Overflow: Immediate and Delayed. With immediate overflow, calls immediately reroute to other extensions when all Voice Mail ports do not answer or, with certain software, are busy. With delayed overflow, calls reroute after a preset interval. Without any type of overflow, the outside calls ring Voice Mail until a port becomes available or the outside caller hangs up.

• **Voice Mail Queuing**
  When accessing the voice mail, the system provides a voice mail queue. If all the voice mail ports are busy, any calls trying to get to the voice mail will be placed in queue. As the voice mail ports become available, the calls will be connected to the voice mail in the order in which they were received. As the Voice Mail Queue follows Department Hunting programming, the queue can hold a maximum of 10 calls. If the queue is full or if the voice mail ports are not assigned to a Department Group, the calls will be handled as though there were no voice mail queuing feature enabled. The calls will either access voice mail if a port is available or they will receive a busy signal.

**Conditions**

A. Ring Group calls do not follow extension call forwarding to voice mail.
B. Some Voice Mail systems cannot set a message waiting indication.
C. This facility allows the integration of various third-party voice mail systems. You may find that a particular system does not operate exactly as described here. Refer to your voice mail system instruction manual for further details.
D. Voice Mail is compatible with System Phone and Single Line Telephones (SLTs) capable of generating DTMF (PB) dialling. If you intend to access the Voice Mail from outside the office, ensure the telephone you are using can also generate DTMF (PB) dialling.

**Default Setting**

Disabled.

• **Programming**

  **10-09-01 :DTMF and Dial Tone Circuit Setup**
  Assign at least one circuit for DTMF reception, of either type 0=Common Use (default) or 1=Extension Only. Use the following as a guide when allocating DTMF receivers:
  - In light traffic sites, allocate one DTMF receiver for every 10 devices that use them.
  - In heavy traffic sites, allocate one DTMF receiver for every five devices that use them.

  **11-07-01 :Department Group Pilot Numbers**
  Assign a Department Group pilot number for the Voice Mail (8 digits max). The extensions are assigned to the group in Program 16-02-01.

  **15-03-03 :Single Line Telephone Basic Data Setup - Terminal Type**
  Set all analogue ports used for Voice Mail as Type 1 : Special.
15-07-01 : Programming Function Keys
Assign a Voice Mail key to an extension. You must enter the Voice Mail key code (SC 851: code 77) followed by an extension number:
- Your own extension number if you are setting up your own Voice Mail key.
- A virtual extension number if you are setting up a Message Center key for a virtual extension.
- A co-worker's extension number if you are setting up a Message Center key for an installed extension.
- An uninstalled extension's number if you are setting up a Message Center key for an uninstalled extension.
Optionally, you may assign a Personal Answering Machine Emulation key (SC851: code 16).

16-02-01 : Department Group Assignment for Extensions
Put all the Voice Mail extensions in an extension group. This allows DILs to Voice Mail to ring other Voice Mail extensions when the DIL’s assigned port is busy. Assign up to Voice Mail extensions to an Extension (Department) Group. Only one Voice Mail group is allowed per system. Assign the Department Group Pilot Number in Program 11-07-01.

20-02-09 : System Options for System Telephones - Disconnect Supervision
Enable (1) disconnect supervision for the system.

24-02-02 : System Options for Transfer - MOH or Ringback on Transferred Calls
Use this option to enable (0) or disable (1) MOH on Transfer. If enabled (0), a transferred caller hears Music on Hold while their call rings the destination extension. If disabled (1), a transferred caller hears ringback while their call rings the destination extension. For this option to work with voice mail, the transferred call must be an unscreened transfer.

20-06-01 : Class of Service for Extensions
Assign a Class of Service (1-15) to an extension.

20-13-13 : Class of Service Options (Supplementary Service) - Continued Dialling
Enable Continued Dialling (1) for all extensions that will dial Voice Mail features.

22-01-04 : System Options for Incoming Calls - DIL No Answer Recall Time
If setting up Delayed Voice Mail Overflow, enter a timer value greater than 0. Overflow will occur after this interval (provided the other related programming is correct). If setting up Immediate Voice Mail Overflow, enter 0.

22-02-01 : Incoming Call Trunk Setup
Assign Service Type 4 to each trunk you want to ring into Voice Mail as a Direct Inward Line (DIL).

22-04-01 : Incoming Extension Ring Group Assignment
To enable Voice Mail Overflow, assign selected extensions to a Ring Group that will ring for unanswered DILs to Voice Mail ports. In Program 22-06, enter 1 to enable overflow ringing.
22-07-01 :DIL Assignment
Assign a Voice Mail port as the DIL destination for each trunk that should directly ring into Voice Mail. If all Voice Mail ports are in the same unique Extension (Department) Group (see Program 16-02 below), the DIL will ring another Voice Mail port if its assigned port is busy.

22-08-01 :DIL/IRG No Answer Destination
For Voice Mail Overflow, enter the Ring Group that unanswered DILs to Voice Mail will ring after the DIL Call Waiting time (Program 22-01-04).

24-02-03 :System Options for Transfer - Delayed Call Forwarding Time
Set the interval a transferred call waits at a forwarded extension before routing to the called extension's mailbox.

40-03-01 :Message Recording Setup - Voice Mail Recording Time
Set the amount of time the voice mail can record a message (1-10 minutes).

40-03-02 :Message Recording Setup - Guidance Message
Select a guidance message in case recording is not allowed (0=fixed, 1=answer message mailbox).

40-03-03 :Message Recording Setup - Response Message
Determine if a response message is automatically sent out when busy (0=disable, 1=enable).

45-01-01 :Voice Mail Integration Options, Voice Mail Department Group Number
Assign which Extension (Department) Group number (0-64) is to be assigned as the voice mail group. An entry of '0' means there is no voice mail installed.

45-01-02 :Voice Mail Integration Options, Voice Mail Master Name
Enter the Voice Mail master name up to 12 characters.

45-01-03 :Voice Mail Integration Options, Voice Mail Screening
Enable (1) or disable (0) the system's ability to process the Call Screening commands (1 + extension number) sent from the Voice Mail. You should normally enable this option to allow for Voice Mail Call Screening. Disable this option if your system has been modified so that extensions begin with the digit 1 (e.g., 101, 102, etc.). Also see the Flexible System Numbering feature.

45-01-04 :Voice Mail Integration Options, Park and Page
Enable (1) or disable (0) the system's ability to process the Voice Mail's Park and Page (*) commands. You should normally enable this option.

45-01-05 :Voice Mail Integration Options, Message Wait
Enable (1) or disable (0) the system's ability to process the Voice Mail's Message Wait (#) commands. You should normally enable this option. If enabled, be sure that the programmed Message Notification strings don't contain the code 805 for trunk access.

Voice Mail Integration Strings
Example: Active Voice Lingo Voice Mail System

In this example, the Active Voice Lingo voice mail system is connected to the Topaz hybrid ports as an analogue device. The analogue ports connected to the Lingo need to be assign to a department group in Topaz system programming. This department group requires a Pilot number, which will provide the port hunting. Basic Program settings will include the following:

- **11-07** Specify the Pilot number for Department Group.
- **15-03-03** For the analogue ports connected to the Lingo, set to "1:Special".
- **16-02** Assign the analogue ports connected to the Lingo into a Department Group.
- **45-01** Enter the Department Group number that is being used for External Voice Mail.

For the Lingo system to integrate with Topaz, a switch file must be invoked within the Lingo. The switch file is resident in Lingo and can be invoked by typing INT=TOPAZ at the system integration line (System Integration Page 1, Line 2). If the Lingo system does not include the TOPAZ integration code, this may be entered manually, by typing the following lines into the Lingo file AVANALOG.AVD.

<table>
<thead>
<tr>
<th>CCC</th>

</table>
You may also require a new DEFAULT.SWS file for the Lingo to support the Topaz system. Contact your NEC or Active Voice representative for details on how this may be updated.

**Related Features**

- **Call Forwarding, Fixed**
  Fixed Call Forwarding can be used to transfer a user's unanswered calls to their voice mail. Call Forwarding does not have to be programmed manually by every user.

- **Direct Inward Line**
  To have the Voice Mail Automated Attendant answer a trunk, program the trunk as a DIL to a Voice Mail port.

- **Message Waiting**
  Message Waiting functions normally with Voice Mail installed.

- **One-Touch Calling**
  An extension can have a One-Touch Key for the Voice Mail Master Number.

- **Programmable Function Keys**
  Function keys simplify calling the Voice Mail system.

- **Ring Groups**
  Ring Group calls do not follow extension call forwarding to voice mail.

**Operation**

**CALLING YOUR MAILBOX**

To call your mailbox:

*With a system phone, your Message Center keys flash red when they have messages waiting. If you don't have a Voice Mail key, your MW LED flashes instead.*

**System Phone**

1. Press your Voice Mail key (PGM 15-07 or SC 851: 77).

   OR

   Press the CALL key and dial the Voice Mail Master Number.

   Your mailbox number is normally the same as your extension number. You may optionally dial a co-worker's mailbox - or use this procedure to call your mailbox from a co-worker's phone.

   OR

   Press the CALL key and dial 717.
2. If requested by Voice Mail, enter your security code.

   Ask your Voice Mail system administrator for your security code.

   Normally, your MW LED goes out (if applicable). If it continues to flash, you have
   unanswered "Message Waiting" requests or a new "General Message". Go to "To check
   your messages" below.

Single Line Telephone
1. Lift handset and dial 717.
   If you are at a co-worker's phone, you can dial the Voice Mail master number and
   your mailbox number instead. You can also use this procedure from your own phone to
call a co-worker's mailbox.

2. If requested by Voice Mail, enter your security code.

LEAVING A MESSAGE (System Phone Only)

To leave a message in the mailbox of an unanswered extension

   The extension you call can be busy, in DND, or unanswered.

1. Press Voice Mail key (PGM 15-07 or SC 851: code 77)
   The Voice Mail system will prompt you to leave a message.

FORWARDING CALLS TO YOUR MAILBOX

To activate or cancel Call Forwarding:

1. Press the CALL key (or lift handset) and dial 888.
   OR
   Press your Call Forward (Station) key (PGM 15-07 or SC 851: code 16).

2. Dial Call Forwarding condition:
   2 = Busy or not answered
   4 = Immediate
   6 = Not answered
   0 = Cancel

3. Dial Voice Mail master number or press Voice Mail key.

4. Dial Call Forwarding type:
   2 = All calls
   3 = Outside calls only
   4 = Intercom calls only

5. Press SPK to hang up (or go on-hook) if you dialed 888 in step 1.
   Your DND or Call Forwarding (Station) key flashes when Call Forwarding is activated.

TRANSFERRING CALLS TO A MAILBOX

To Transfer your active call to a mailbox:

System Phone

1. Press HOLD.

2. Press Voice Mail key (PGM 15-07 or SC 851: code 77).

3. Dial number of mailbox to receive Transfer.

   This number can be your mailbox number or a co-worker's mailbox number.
   OR
   Press DSS Console or One Touch key for extension who's mailbox will receive
   the Transfer.

   If the Transfer destination is an extension forwarded to Voice Mail, the call waits
   before routing the called user's mailbox. This gives you the option of retrieving the call
   instead of having it picked up by Voice Mail.
4. Hang up.
   Voice Mail will prompt your caller to leave a message in the mailbox you selected.
   OR
1. Dial extension number or press a DSS Console key for extension who's mailbox will receive the Transfer.
2. Press Voice Mail key (PGM 15-07 or SC 851: code 77).
3. Hang up.
   Voice Mail will prompt your caller to leave a message in the mailbox you selected.

Single Line Telephone
1. Press Hookflash.
2. Dial Voice Mail master number followed by destination mailbox.
   *If the Transfer destination is an extension forwarded to Voice Mail, the call waits before routing the called user's mailbox. This gives you the option of retrieving the call instead of having it picked up by Voice Mail.*
3. Hang up.

PERSONAL ANSWERING MACHINE EMULATION (System Phone Only)

To set or cancel Personal Answering Machine Emulation:
1. Press idle CALL key (or lift handset) and dial 888.
   OR
   Press your Call Forward (Station) key (PGM 15-07 or SC 851: code 16).
2. Dial 1 and the Call Forwarding type:
   2 = All calls
   3 = Outside calls only
   4 = Intercom calls only
3. Press SPK to hang up (or hang up at DSL/SLT) if you dialed 888 in step 1.
   *Your DND or Call Forwarding (Station) key flashes when Call Forwarding is activated.*

When Personal Answering Machine Emulation broadcasts your caller's message, you can:

Your telephone must be idle (not on a call).
1. Do nothing.
   The message is automatically being recorded in your mailbox. The broadcast stops when your caller hangs up.
   OR
1. Lift the handset.
2. Press the flashing CALL key to intercept the call.
   You connect to the caller. The system records the first part of the message in your mailbox. The line key changes from red to green.
   OR
1. Lift the handset.
2. Press a line key or CALL key for a new call.
   The message is recorded in your mailbox.
   OR
1. (If you have Automatic Handsfree) Press a line key or CALL key for a new call.
   The message is recorded in your mailbox.
OR

1. Press SPK to cut off the message broadcast and send the call to your mailbox.
   
   Voice Mail records the entire message in your mailbox.

CHECKING YOUR MESSAGES (System Phone Only)

To check your messages:

1. Press CHECK
2. Dial 841.
   
   You can have any combination of the message types in the table below on your phone.
3. Press VOL ▲ or VOL ▼ to scroll through your display.
4. When you find the message you want to answer, press CALL. You'll either:
   - Go to your Voice Mail mailbox.
   - Listen to the new General Message.
   - Automatically call the extension that left you a Message Waiting.

Note: If you have multiple new messages in your voice mailbox and you exit the mailbox without listening to them all, the display on your system phone will show "NO MESSAGES", however the Message Waiting lamp will remain lit to indicate that there are still unread messages in your mailbox.
Voice Response System (VRS)

• **Description**

The DSPDBU daughter board provides the option for Voice Response System (VRS) which gives the system voice recording and playback capability. This enhances the system with:

- **VRS Messages** - are 48 system messages used for the General Message, Automated Attendant greetings and the Preamble message
- **General Message** - provides a pre-recorded message to which any user can listen
- **Personal Greeting** - lets an extension user record a message and forward their calls. Callers to the extension hear the recorded message and are then redirected.
- **Park and Page** - parks a call at an extension and automatically pages the user to pick it up
- **Automated Attendant (Operator Assistance)** - answers incoming calls, plays a greeting to the caller and then lets the caller directly dial a system extension
- **Voice Prompting Messages** - plays call and feature status messages to users
- **Preamble Message** - alerts callers of the cost and features of the “pay-per-call” service they have called. May also be used as an auto-answer with greeting application
- **Time, Date and Station Number Check** - lets a system phone extension user quickly hear a recording for the time, date, or the extension’s number.

**VRS Messages**

The VRS allows you to record up to 48 VRS messages. You allocate these messages for Automated Attendant greetings, the General Message and the Preamble message. The maximum duration of any one VRS message is not programmable. VRS messages are stored permanently in the event of a power failure.

Any on-premise extension, DISA or DID caller can listen, record and erase VRS Messages (unless restricted in programming). DISA and DID callers use the same procedures as on-premise users, except that they must additionally enter a VRS password.

**General Message**

A General Message is a pre-recorded message available to all callers. A General Message typically contains important company information that all employees should hear. To hear the General Message, an employee can go to any system phone and press 4 (for General Message). You can restrict the ability to record the General Message in an extension’s Class of Service. This allows you to give recording capability to the System Administrator or Communications Manager, for example, but not any employee. The MW LED at each telephone flashes when a new General Message is recorded. Once the extension user listens to the message, the MW LED goes out.
Personal Greeting

Personal Greeting allows an extension user to record a message and forward their calls. Callers to the extension hear the recorded message and are then forwarded to the new destination. With Personal Greeting, an extension user can add a personal touch to their Call Forwards. For example, a user can record:

"Hi. This is John Smith. I’ll be out of the office today. In my absence, Mary Jones can answer all your questions. Please hold on for Mary."

After they record their Personal Greeting, the extension user chooses the condition that will activate Personal Greeting. Personal Greeting will activate for:

- Calls to the extension when it is busy or not answered
- All calls immediately
- Calls to the extension that are unanswered

The extension user then selects the destination for their calls. The choices are:

- A co-worker’s extension
- Personal Greeting only (without forwarding)
- The extension user’s own subscriber mailbox (if Voice Mail ([DSPDB-A2] is installed)
- Off-Premise via Common Abbreviated Dialling

In addition, the user can have Personal Greeting activate automatically for all calls, just CO (trunk) calls or just Intercom calls. When the user implements Personal Greeting for all calls, the system plays the greeting and reroutes:

- Calls transferred from the Automated Attendant (OPA)
- DISA calls ringing the extension
- DID calls ringing the extension
- Direct Inward Lines (DILs) ringing the extension
- Intercom calls

With Personal Greeting for only CO (trunk) calls, the system reroutes all of the calls listed above except Intercom calls.

Personal Greetings are stored permanently. If there is a commercial power failure or if the system resets, any recorded Personal Greetings are kept.

<table>
<thead>
<tr>
<th>Unique Personal Greeting Conditions</th>
</tr>
</thead>
<tbody>
<tr>
<td>If a call comes into the extension when there are no VRS ports available to play the Personal Greeting, the system forwards the call without playing the recorded message to the caller.</td>
</tr>
<tr>
<td>If an extension has Personal Greeting (RNA – Ring No Answer) enabled, Intercom calls that voice announce are not subject to Personal Greeting rerouting.</td>
</tr>
<tr>
<td>Personal Greeting does not reroute normal Ring Group calls. Calls transferred from a co-worker or Voice Mail route to the forwarding destination without listening to the Personal Greeting.</td>
</tr>
</tbody>
</table>
Park and Page
When an extension user is away from their phone, Park and Page can let them know when they have a call waiting to be answered. To enable Park and Page, the user records a Personal Greeting along with an additional Paging announcement. Park and Page will then answer an incoming call and play the Personal Greeting to the caller. The caller then listens to Music on Hold (if available) while the system broadcasts the prerecorded Paging announcement. When the extension user hears the Page, they can go to any telephone and use Directed Call Pickup to intercept the call.

For example, John Smith could record a Personal Greeting that says:

“Hello, this is John Smith. I am away from my phone right now but please hold on while I am automatically paged.”

The pre-recorded Paging announcement could say: “John Smith, you have a call waiting on your line.”

The incoming caller hears the first message and listens to Music on Hold while the system broadcasts the second message. John Smith could then walk to any phone and pick up his call. If John doesn’t pick up the call, the Page periodically repeats.

Park and Page follows the rules for Personal Greeting for All Calls, immediately rerouted. This means that Park and Page will activate for ringing Intercom calls, DID calls and DISA calls. It will also activate for calls transferred from the Automated Attendant. Additionally, calls from the Automated Attendant follow Automatic Overflow routing if not picked up. Park and Page will activate for transferred outside calls but not play the Personal Greeting to the caller. If a call comes in when the specified Page zone is busy, the system broadcasts the announcement when the zone becomes free.

Automated Attendant (Operator Assistance)
Automated Attendant automatically answers outside calls, plays a pre-recorded greeting and then lets the outside callers directly dial system extensions, Department Calling Groups and Voice Mail. Automated Attendant provides immediate answering and routing of outside calls without the need for an operator or dispatcher. Automated Attendant provides:

- **Single Digit Dialling**
  Single Digit Dialling allows Automated Attendant callers to dial extensions, Department Groups, Voice Mail or external numbers by pressing a single digit. For example, your Automated Attendant can greet calls with, “Thank you for calling. To place an order, dial 1. To check on an existing order, dial 2. To speak with an operator, dial 9.” You can set up single digit Dialling for each VRS Message programmed to answer outside calls via the Automated Attendant. This allows you to set up day/night/holiday greetings or unique greetings for each incoming trunk. (Keep in mind that, with a default system, if you assign destinations to digits 3, 4 and 5, outside callers will not be able to dial system extensions.)

- **Simultaneous Call Answering**
  With VRS installed, the Automated Attendant can answer up to 16 calls simultaneously.
• **Flexible Routing**
  The outside caller can directly dial any system extension, Department Calling Group or Voice Mail. If the caller dials a busy extension, Automated Attendant allows them to dial another extension or wait for the busy extension to become free.

• **Automatic Overflow**
  Automatic Overflow can automatically redirect a call if it can’t go through. This can happen if all VRS ports are busy, if the called extension doesn’t answer, or if the caller misdials or waits too long to dial. (This would occur if the caller is using a dial pulse telephone.) When the call overflows, it rings a designated Ring Group or the Voice Mail system.

• **Programmable Automated Attendant Greetings**
  You can record a different greeting for each trunk answered by the Automated Attendant. The greetings can be different in the day, at night or on holidays or weekends. You can also have a special greeting if the caller misdials. You record the greetings just the way you want. For example, “Dial the three-digit extension number you wish to reach, dial 500 for Sales or dial 600 for Customer Service.” When assigning and recording Automated Attendant greetings, you can choose among the 48 VRS messages.

**Voice Prompting Messages**
The VRS feature provides the system with Voice Prompting Messages. These Voice Prompting Messages tell the extension user the status or progress of their call. For example, if a user calls extension 200 when it is busy, they hear, “Station 200 is busy. For Callback, dial 2.”

**Preamble Message**
If the system has trunks that are part of the Caller Paid Service, the VRS can automatically play a pre-recorded message when a user answers the call. This pre-recorded message should describe the Caller Paid Service features and cost. The Preamble Message ensures that the caller is always aware that they have accessed a “pay- per-call” service. A system user cannot converse with the caller until the preamble message ends. If the caller hangs up before the message completes, they are not charged for the call. If the caller waits for the message to end, they can talk to a system user and call charging begins. The system will answer as many Caller Paid Service calls as there are available VRS ports. If a Caller Paid Service calls comes in when all VRS ports are busy, the call will not appear on an extension until a VRS port is available.

You can also use the Caller Paid Service Preamble message to set up an Auto-Answer with Greeting application. When a receptionist answers a call, the VRS can play a preamble message such as, “Welcome to ABC Company. How can I help you?” When the caller replies, the receptionist answers, “One moment please,” and quickly extends the call to the desired party. This ensures that all incoming calls are answered quickly, courteously and consistently.

**Time, Date and Station Number Check**
If the system has a DSP daughter board installed for VRS, any system phone user can find out the time, date or the extension’s number while their phone is idle (on hook). The time and date check saves the user time since they don’t have to look for a clock or
calendar. Hearing the extension number conveniently identifies non-display System Phones. To find out their extension number, the user presses 6 (for Number). To listen to the time and date, the user presses 8 (for Time).

**Voice Prompting Messages**
The VRS feature provides the system with Voice Prompting Messages. These Voice Prompting Messages tell the extension user the status or progress of their call. For example, if a user calls extension 300 when it is busy, they hear, “Station 300 is busy. For Callback, dial 2.”

**Conditions**
A. Park and Page announcements will only repeat once.
B. VRS message record time is fixed at 2 minutes and it cannot be change.
C. VRS Delay Message to a department group is only played when all parts in the group are busy

**• Programming**

13-01-01: Abbreviated Dialling Function Setup - Abbreviated Dialling Auto Outgoing Call mode
Assign as Trunk Outgoing Mode when all Abbreviated Dialling bins contain external numbers only. The trunk access code (default=0) is automatically prefixed to each number when dialled. Assign as Extension Outgoing Mode to allow Abbreviated Dialling bins to contain both external and internal numbers. In this case, external numbers must include the trunk access code (default=0) when the number is stored.

15-07-01: Programming Function Keys
For one-button access to the Call Forwarding (device) setup code (*4 713), assign a Call Forwarding (Device) key (code 17).

20-06-01: Class of Service for Extensions
Assign a Class of Service (1-15) to extensions.

20-07-13: Class of Service Options (Administrator Level) - VRS Record
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to record, erase and listen to VRS messages.

20-07-14: Class of Service Options (Administrator Level) - VRS General Message Listen
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to dial 4 or Service Code 111 711 and listen to their General Message.
20-07-15: Class of Service Options (Administrator Level) - VRS General Message Record
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to dial Service Code 112 712 and record, listen to and erase the General Message.

20-11-15: Class of Service Options (Hold/Transfer Service) - VRS Personal Greeting
In an extension’s Class of Service, enable (1) or disable (0) the extension’s ability to dial Service Code *4 713 7 to record, listen to or erase a Personal Greeting. This option also affects Park and Page.

22-02-01: Incoming Call Trunk Setup
For each Night Service mode, enter 1 if trunk should be automatically answered by VRS Automated Attendant.

22-04-01: Incoming Extension Ring Group Assignment
Assign extensions to the Ring Group programmed in 25-03 and 25-04 that should receive the rerouted calls.

22-14-xx: VRS Waiting Delayed Message for IRG
Define for each incoming ring group the timers, VRS message number and tone kind for VRS Waiting Message.

22-15-xx: VRS Waiting Message for Department Group
Define for each Department (Extension) Group the timers, VRS message number and tone kind for VRS Waiting Message.

24-02-02: MOH or Ringback Tone on Transferred Calls
If the caller dials a digit during the automated attendant message and a transferred has been initiated, specify whether they will hear either Ring Back Tone (RBT) or Music On Hold (MOH), until the call is either answered or terminated.

24-02-03: System Options for Transfer - Delayed Call Forwarding Time
Set how long a telephone with Personal Greeting options 2 or 6 enabled will ring before the call reroutes to the programmed destination.

25-02-01: DID/DISA VRS Message
For each Night Service mode, enter 1 at the “Talkie” prompt if trunk should be automatically answered by VRS and the message number the caller should hear (1-48).

25-03-01: DID/DISA Transfer Ring Group With Incorrect Dialling
Set the destination that Automated Attendant (OPA) calls ring if the OPA caller dials an incorrect extension number. This also sets the options for DISA calls. The system allows Ring Groups=1-25, VRS=15, DSPDB Voice Mail=101, In-Skin Voice Mail=102 or Disconnect=0.

25-04-01: DID/DISA Transfer Ring Group With No Answer/Busy
Set the destination that Automated Attendant (OPA) calls ring if the OPA caller dials an extension that doesn’t answer or is busy. This also sets the options for DISA calls. The system allows Ring Groups=1-25, VRS=15, DSPDB Voice Mail=101, or Disconnect=0.

25-05-01: DID/DISA Error Message Assignment
For each trunk that will be answered by the VRS, enter the VRS message (1-16) the outside caller hears if they dial incorrectly after answer. If you enter 0, the call reroutes according to Program 25-03 and Program 25-04. Make one entry for each Night Service mode.

**25-06-02: DID/DISA One-Digit Code Attendant Setup**
Set up single digit dialling for Automated Attendant callers. For each VRS Message programmed to answer outside calls (see Program 22-05), specify:

- The digit the Automated Attendant caller dials (0-9, *, #). (Keep in mind that if you assign destinations to digits used for extension numbers, outside callers will not be able to dial system extensions.)

- The destination reached (four digits maximum) when the caller dials the single digit code. This may be an Extension Number, Department Group, or Common Abbreviated Dialling Bin Number.

**25-07-02: System Timers for DID/DISA - DID/DISA No Answer Time**
If an Automated Attendant (OPA) caller dials an extension that doesn’t answer, the call will wait this interval before rerouting to the Ring Group specified in Program 25-03 and 25-04. This setting also affects unanswered DISA calls.

**25-13-01: System Option for DISA - VRS Password**
Enter the password DISA callers must dial before the system will allow them to record, listen to or erase VRS messages.

**31-02-01: Internal Paging Group Assignment - Internal Paging Group Number**
When using Park and Page, assign extensions to Internal Paging Zones. An extension must be assigned to a 2-digit zone in order to access any of the 2-digit zones (Internal Page Zones 0, 1-6, 00, 01-32).

**31-04-01: External Paging Zone Group**
When using Park and Page, assign each External Paging Zone (1-6) to an External Paging Group (1-8) used for accessing the zone.

**31-07-01: Combined Paging Assignments**
When using Park and Page, for each External Paging Zone (1-6 and 0 for All Call), assign a corresponding Internal Zone for Combined Paging.

**40-10-01: Voice Announcement Service Option - VRS Fixed Message**
Enable (1) or disable (0) the system’s ability to play the fixed VRS messages (such as "You have a message.").

**40-10-02: Voice Announcement Service Option - General Message Number**
Enter the number of the VRS message you want to use for the General Message (01-48). The message you select should not be used as a VRS message.

**40-10-03: Voice Announcement Service Option - VRS No Answer Destination**
When all VRS ports are busy, incoming DILs and DISA calls wait for the VRS No-Answer Time (Program 40-10-04) and then ring the VRS No Answer Destination Ring Group.
40-10-04: Voice Announcement Service Option - VRS No-Answer Time
    If an extension has Personal Greeting enabled and all VRS ports are busy, a DIL or DISA call to the extension will wait this interval for a VRS port to become free. If a VRS port is still not available, the call will ring the VRS No Answer Destination set in Program 40-10-03.

40-10-05: Voice Announcement Service Option - Park and Page Repeat Timer
    If a Park and Page is not picked up within this interval, the Paging announcement repeats.

40-11-01: Pre-Amble Message Assignment
    For each trunk that should have the Preamble option, enter the number of the VRS message (1-48) that is your recorded preamble message. Enter 0 for no preamble.
Trunk Automated Attendant (Operator Assist) Programming

START

In 22-02, for each trunk in each DayNight mode, enter a trunk No other than 1.

Should Automated Attendant answer trunk?

No

END

Yes

In 22-02, for each trunk in each DayNight mode, enter 1 if Automated Attendant should answer incoming calls.

In 25-02, for each trunk in each DayNight mode, enter 1 followed by the VRS Message the caller hears after answer.

In 25-05, for each trunk in each DayNight mode, enter the VRS Message the caller hears if they misdial.

If caller misdials, should they hear an error message or rerouted disconnect?

Remote or Disconnect

In 25-03, enter 0 for each trunk in each DayNight mode that should disconnect.

In 25-03, enter the Ring Group number (01-25) for each trunk in each DayNight mode that should reroute.

If caller misdials or waits too long to dial, does call reroute or disconnect?

Reroute

Disc.

In 25-04, enter 0 for each trunk in each DayNight mode that should disconnect.

If caller dialed an ext. that is busy or does not answer, does call reroute or disconnect?

Reroute

In 25-04, enter the Ring Group number (01-25) for each trunk in each DayNight mode that should reroute.

In 22-04, assign extensions to any Ring Group programmed in 25-03/25-04 that should receive rerouted calls.

  - Voice Mail
    Park and Page and Personal Greeting can also be programmed in the VRS.
  - Operation

**VRS Messages**

To Record a VRS Message:
1. Press SPK key or lift handset.
2. Dial 716.
3. Dial 7 (Record).
4. Dial the message number (01-48).
Ensure that the message number selected is not used for other VRS functions.

5. Record your message, after the beep.
   Normally, your message cannot exceed 2 minutes. If you hear, “Recording finished,”
   you have exceeded the allowed message length.

6. Press # to end the recording.

7. Hang up.

To Listen to a Recorded Message:

1. Press SPK key or lift handset.
2. Dial 716.
3. Dial 5 (Listen).
4. Dial the message number (01-48).
   You’ll hear the previously recorded message. If you hear a beep instead, there is no
   previous message recorded.
5. Press # to listen to the message again.
6. Repeat from step 3 to listen to another message.
7. Hang up.

To Erase a Recorded Message:

1. Press SPK key or lift handset.
2. Dial 716.
3. Dial 3 (Erase).
4. Dial the message number (01-48).
5. Press HOLD (system phone only) to cancel the procedure without erasing (and return
   to step 3).
6. Hang up to erase the message.

To Record, Listen to or Erase a VRS Message via DISA:

1. Place a call into the system.
2. After the system answers, dial the DISA password (default=000000).
3. Dial 716 and the VRS password.
4. Dial the function you want.
   7 = Record
   5 = Listen
   3 = Erase
5. Dial the message number (01-48).
6. Record the message and press # to end recording.
7. If you dialled 7 to record, you can dial # to listen to the message you just recorded.
8. If you dialled 5 to listen, you can dial 5 and message number to hear it again or if you
   want to record, listen to or erase another message, go to step 4.
9. If you dialled 3 to erase, you must go to step 7 (hang up).
10. Hang up.

VRS Message Numbers:
By default, VRS message numbers are not assigned. Enter into the table below the message numbers which have been assigned to common VRS messages in your system.

<table>
<thead>
<tr>
<th>Message Name</th>
<th>Message No. (01~48)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Automated Attendant</td>
<td></td>
</tr>
<tr>
<td>Guidance Message</td>
<td></td>
</tr>
<tr>
<td>General Message</td>
<td></td>
</tr>
<tr>
<td>Preamble Message</td>
<td></td>
</tr>
</tbody>
</table>

**General Message**

**To Listen to the General Message:**

**System Phone**

*Your MW LED flashes when there is a new General Message. A voice message periodically reminds you.*

1. While telephone is idle, dial 4.
   -OR-
2. Press the SPK key or lift handset.
3. Dial 711.
4. Listen to the General Message.
   *Normally, your MW LED goes out. If it continues to flash, you have an unanswered “Message Waiting” requests or new messages in your “Voice Mail” mailbox.*

**Single Line Telephone**

1. Press the SPK key or lift the handset.
2. Dial 712.
3. Dial 5 (Listen).
4. Listen to message.
5. Dial 5 again to repeat.
6. Hang up.

**To Record the General Message:**

1. Press the SPK key or lift the handset.
2. Dial 712.
3. Dial 7 (Record).
4. Record message, then dial # when finished.
5. Hang up.

**To Erase the General Message:**

1. Press the SPK key or lift the handset.
2. Dial 712.
3. Dial 3 (Erase).
4. Press HOLD to cancel without erasing (System Phone only).
5. Hang up.

**Personal Greeting**

**To enable a Personal Greeting:**

1. Press the SPK key or lift handset, and Dial 713.
   -OR-
   Press the Call Forwarding (Device) key (SC 851:17).
2. Dial 7.
3. Record your Personal Greeting, or
   if you already have Personal Greeting or Park and Page set up, you can dial:
   7 to re-record
   5 to listen (then # to listen again)
   3 to erase (press HOLD to cancel erase)
4. Dial # + Personal Greeting condition:
   2 = Busy/No Answer
   4 = Immediate All Calls
   6 = No Answer
5. Dial the destination to receive your calls. The destination can be:
   6. A co-worker’s extension.
   7. Your Voice Mailbox (by dialling the Voice Mail master number).
   8. Off-premise via Common Abbreviated Dialling (by entering 813 + bin).
   9. Greeting without forwarding so caller hears busy (by entering your extension number).
10. You cannot forward to a Department Group pilot number.
11. Dial Personal Greeting type:
    2 = All calls
    3 = Outside calls only
    4 = Intercom calls only
12. Hang up.
    *Your DND or Call Forwarding (Device) Programmable Function Key flashes when Call Forwarding is activated.*

**To cancel your Personal Greeting:**

1. Press the SPK key or lift handset.
2. Dial 713 + 73.
3. Hang up.

**Park and Page**

**To have the System Page you when you have a Call:**

1. Press the SPK key or lift handset, and Dial 713.
   -OR-
   Press the Call Forwarding (Device) key (SC 851:17).
2. Dial 7.
3. Record your Personal Greeting, or if you already have Park and Page or Personal Greeting set up, you can dial:
   7 to re-record
   5 to listen (then # to listen again)
   3 to erase (press HOLD to cancel erase)
5. Record your Page Message.
   *E.g.* Internal Zone 1 = 801 + 1.
   External Zone 1 = 803 + 1.
   Combined Zone 1 = 751 + 1.
7. Dial Park and Page type:
   2 = All calls
   3 = Outside calls only
8. Hang up.
   Your DND or Call Forwarding (Device) Programmable Function Key flashes when Call Forwarding is activated.

**To Pick Up your Park and Page:**
1. Press the SPK key or lift handset.
2. Dial 715 + Your Extension Number.

**To Cancel your Park and Page:**
1. Press the SPK key or lift handset.
2. Dial 713 + 73.
3. Hang up.

**Preamble Message**

**To Answer a Call with Preamble Message:**
1. Answer the ringing call and wait for the preamble message to finish.
   *The line key turns solid red as the system automatically plays the preamble message to the caller.*
2. When you hear two beeps and the line key turns green, converse with the caller.

**Checking Time/Date & Station Number**

**System Phone Only**

**To listen to the Station Number:**
1. While telephone is idle, dial 6.

**To listen to the Time/Date:**
1. While telephone is idle, dial 8.
Volume Controls

• Description

Each system phone user can control the volume of incoming ringing, splash tone, Paging, Background Music, Handsfree and your handset. System Phones consolidate all adjustments into the volume buttons. Pressing the VOLUME UP or VOLUME DOWN will adjust the volume level for whichever feature is active (outside call, ICM, ICM ringing, paging, etc.). Pressing these keys when the phone is idle will adjust the contrast level of the telephone’s display. The users should set the volumes for their most comfortable levels.

Conditions

The contrast is not adjustable when the phone has background music enabled.

Default Setting

Enabled.

• Programming

None

• Related Features

None

• Operation

To adjust the volume of incoming ringing and splash tone:

1. If the phone is idle, dial 829. If the phone is ringing, skip to Step 2.
2. Press VOLUME ↑ or VOLUME p.

To adjust the volume of incoming Paging announcements, Handsfree, the handset or Background Music:

1. Press VOLUME ↓ or VOLUME p.

The feature must be active to change the volume. Pressing the volume keys when the phone is idle will adjust the display’s contrast.
Warning Tone For Long Conversation

• Description

The system can broadcast warning tones to a trunk caller warning them that they have been on the call too long. The tones are just a reminder -- the user can disregard the tones and continue talking if they choose. The outside caller does not hear the warning tones. In addition, warning tones do not occur for Intercom calls and most incoming trunk calls. DISA trunks can also have warning tones. Warning tones are not available to analogue single line telephone (SLT) users.

There are two types of warning tones: Alarm Tone 1 and Alarm Tone 2. Alarm Tone 1 is the first set of tones that occur after the user initially places a trunk call. Alarm Tone 2 broadcasts periodically after Alarm Tone 1 as a continued reminder. Each alarm tone consists of three short beeps.

Warning Tone for DISA Callers

For DISA callers, with this feature enabled, the warning tone timer begins when an incoming DISA call places an outgoing call and either the inter-digit timer expires or the outgoing call is answered.

With this feature enabled, the warning tone timer begins when an incoming DISA call places an outgoing call and either the inter-digit timer expires or the outgoing call is answered.

If an outside call is transferred to forwarded off-premise using an outside trunk, the warning tone timer begins immediately. This will occur only if either trunk involved in the call is programmed for this feature (Program 14-01-17). When transferring a trunk call off-premise, Program 14-01-13 must be enabled (set to ‘1’).

Conditions

None

Default Setting

Disabled for all trunks.

• Programming

14-01-17: Basic Trunk Data Setup - Trunk to Trunk Warning Tone for Long Conversation Alarm
Determine whether DISA callers should hear the Warning Tone for Long Conversations (0=disabled, 1=enabled).

20-06-01: Class of Service for Extensions
Assign a Class Of Service (1-15) to an extension.

20-13-01: Class of Service Options (Supplementary Service) - Long Conversation Alarm
In an extension’s Class of Service, enable (1) or disable (0) Warning Tone for Long Conversation.
20-21-01: System Options for Long Conversation - Long Conversation Alarm
1
After a user places a trunk call, the system sends the first warning tone to their extension after this interval (0-64800 seconds).

20-21-02: System Options for Long Conversation - Long Conversation Alarm
2
After hearing the first warning tone, the system sends additional warning tones after this interval (0-64800 seconds). The warning tones continue, spaced by this interval, until the user hangs up.

21-01-03: System Options for Outgoing Calls - Trunk Interdigit Time (External)
Determine the length of time the system should wait before starting the Warning Tone Timer.

25-07-07: System Timers for DID/DISA - DISA Conversation Warning Tone Time
Determine the length of time the system should wait before the Warning Tone is heard by DISA callers (0-64800 seconds). If an outside call is transferred or forwarded off-premise using an outside trunk, this timer starts immediately. This will occur if either trunk involved in the call is programmed for the Warning Tone (Program 14-01-17).

25-07-08: System Timers for DID/DISA - DISA Long Conversation Disconnect
Determine how long after the Warning Tone is heard the system will wait before disconnecting DISA calls.

• Related Features

• Central Office Calls, Answering
