

ST450 / ST465

Mobile client

A smart mobile extension for **your smartphone**

Today's competitive and fast past business environment means that employees are no longer bound to a desk - you need to be mobile and be able to work where your work takes you. NEC's UNIVERGE ST450 and ST465 softphones for Apple and Android smartphones allow you to make and receive calls from virtually anywhere, as if you were at your desk. While in the office connect to the Wi-Fi and you are now ready to handle your calls. While outside the office you can use your mobile data* (3G / 4G) to handle your calls without incurring mobile call costs.

Deploying a ST softphone can save your company money by no longer having employees call-forward their desk phones to their mobile. Staff will also be able to make free internal calls and inexpensive local calls from the softphone rather than all calls being made directly from their mobile phone.

By only giving out your desk phone number (not your mobile number), you will always be contactable and you will only have a single call history and work voicemail to check. The ST450 / ST465 simplifies your communications.

In the office

You can now move about the office freely, all while being easily contactable. Perfect for mobile staff members including housekeeping, warehouse staff, healthcare professionals or anyone who spends time away from their desk.

On the road

Being on the road shouldn't mean you miss an important call. Your smartphone doubles as your mobile extension.

Connect to Wi-Fi while travelling overseas to be contactable without paying roaming charges.

At home

Working from home should not mean that you are isolated. With the ST400 softphone, you will make and receive calls just like you were at work - it really is that simple.

Work everywhere
